> You want to install the filter between the power supply (cigerette
> lighter) and the radio. You would have to (in-line) install the filter at
> the back of the lighter.

Why couldn't the filter be installed in the cord of the adapter that plugs my radio into the lighter-plug?
Total dummy when it comes to this stuff, so I don't wanna mess with the CAR at all..<grin>
My first one to be almost paid for. Would sure hate to burn it up first.

Aub Topp VK2AXT: bulletin

Progress report on Aub Topp VK2AXT

Here is an update on the condition of Aub Topp the Divisional Librarian from his wife on Friday afternoon.

Surgeons have removed some of the tubes and changed the medication. Some colour has returned to his face. He is now breathing normally with help of an oxygen mask. He is no longer delirious. His family can understand all that he says.

Hospital staff assisted him in taking a few steps on Thursday. This is to stimulate his lungs.

Friends are requested NOT to send him any food or drink. He is currently being fed intravenously.

He is still not allowed any visitors.

Item submitted by the Divisional Secretary Eric Fossey VK2EFY

CAA-Seaview Inquiry

COMMISSION OF INQUIRY INTO RELATIONS BETWEEN THE CAA AND SEAVIEW AIR
AMATEUR RADIO OPERATORS CAN YOU ASSIST?

As reported in the media last year, on Sunday 2 October 1994, an aircraft was lost between Williamtown and Lord How Island. The lives of the pilot and all 8 passengers were lost. The aircraft was a 10 seat Aerocommander 690B with a call sign of VH-SVQ.

Between midday and 2pm of that day, there were various communicat-ions among VH-SVQ and three other airborne aircraft (VH-IBF, VH-SVV and VH-SVN). The communications occurred on VHF frequency 120.6 mhz [sic].

Information about the communications may be of assistance to the Commission of Inquiry into the Relations between CAA and Seaview Air.

If you, or any person you know, heard radio exchanges on 2 October 1994 which you believe may have been to, from or about the aircraft VH-SVQ, would you please, as soon as possible, telephone Ms Christine Briton, Secretary of the Commission on (02) 336 7100 or send a fax on (02) 360 7551.

Written correspondence should be addressed to:

South Coast repeaters

On Sunday the 13th of August, a working-bee of over 15 Amateurs, their wives and kids, was held at Saddleback Mountain five kilometres west of the town of Kiama.

The working-bee was a combination effort of three Amateur organisations, they being the Shoalhaven Amateur Radio Club, South Coast WICEN and the Illawarra Amateur Radio Society.

From the meeting time of 12pm, through to 5.30, both a 2 metre and 70 centimetre voice repeater were established and put on the air. In the 5 nd a half hours, foundations had been dug, concrete laid, antenna mast erected, heliax feed-line run and terminated, power supplies and batteries installed as well as the two repeaters installed in a security cabinet. This amount of work co-ordination was a site to behold!

Saddleback Mountain is bewtween Wollongong and Nowra and is about 546 metres or 1,820 feet above sea level. Coverage is from Batemans Bay in the south, to many parts of Sydney in the north. The coverage also includes the very busy Princes Highway, from Albion Park to Nowra and Seven Mile Beach Road, that were both bot previously covered.

The 2 metre repeater is currently on 146.850, with a negative offset. This frequency is to be changed in the next few weeks as it is the VK2RAW Mount Murray frequency. Currently, while on test, the Saddleback Mountain repeater is on the air all the time except for the WIA Sunday Broadcasts, when the Mount MUrray 6850 is put on the air for the duration. The Saddleback 6850 has a female voice for identification and has a RF output of 25 watts. There is some more work to be done in the future, including better receive performance.

The Saddleback 70 centimetre repeater is on 439.275MHz, with a negative offset as well. At present it favours the southerly direction more than the north, but has been worked by many stations in Sydney. This repeater is the old VK2RSD system from Cambewarra Mountain above Nowra and will remain on this frequency.

The three clubs involved with the installation invite comments on the two repeaters performance and coverage, but please remember there are more improvements planned for both systems.

submitted by Rob VK2MT, Secretary & Repeater Officer for the
Illawarra Amateur Radio Society

Council meeting postponed

The Council meeting set down for Friday 8th September has been postponed to the following week Friday 15th September.

Council regrets any inconvenience to members.

VK2 WICEN news

VK2 WICEN News

This is a reminder that the closing date for newsletter contributions (including AGM reports) is 30th August, to the sub-editor, John VK2AMH.

There are several events next month; the Cessnock MG Car Rally, run by Frank VK2XVJ, is on 10th September, and the VRA Bike Ride is on 17th September; we understand that a good showing here will be advantageous when the Sydney Olympics come around, so if you want WICEN to be involved in them then please consider helping out here.

The Hunter region are running a training camp on the weekend of 7-8th October at the YMCA at Crangen Bay, Lake Macquarie; all Amateurs are invited (not just WICEN members). The cost is $35, which includes lunch and dinner on Saturday, Saturday night accommodation, and a hearty breakfast on Sunday. Course notes are included. For an extra $5 you will get a barbecue lunch on Sunday. Accommodation is dormitory style with communal showers; please bring with you toiletries, sleeping bag or sheets and blankets, and overalls and boots for the Sunday field exercise. As places are limited get in early and reserve your place now, by contacting Pauline VK2GTB on (049) 49-8786, or Frank VK2XVJ at VK2KLW.

Those regions wishing to have their activities publicised on this broadcast are requested to get the details to the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the preferred medium, to the VK2KFU system itself (AX\&.25 or TCP/IP), or failing that, to VK2DAA, VK2OP, or VK2GJB.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

IPS Course in Sydney
IPS USER TRAINING COURSES

SYDNEY
Wednesday, 20 September 1995

In order to increase the value of IPS Radio & Space Services to its customers, a one-day User Training Course is offerred in the use of IPS Predictions and Warnings. A one-day course will be

conducted in Sydney on Wednesday, 20 September 1995.

The course wil consist of four sessions. The topics covered in each session are:

SESSION 1 - The scientific background ot IPS predictions

* The ionosphere and its formation
* Reflection and absorption of radio waves
* Ionospheric variations
* Mappinf and predicting the atmosphere

SESSION 2 - HF radio propagation

* Oblique propagation

SESSION 3 - Short-term disturbances caused by the sun

* The sun-earth environment
* The main types of solar activity
* The terrestrial effects of solar activity

SESSION 4 - IPS predictions and demonstrations of ASAPS and the Ground Wave Prediction System (GWPS)

The presentation of the course will be based on overhead transparencies. Each person will receive a copy of the IPS User Training Manual which includes copies of the transparencies used, along with relevant descriptive text and information on IPS Services.

Generally the course is aimed at the HF communicator, but the presentation can be tailored to suit the audience by emphasising topics of special interest. You should indicate your particular speciality or interest (eg communications, geophysics, etc) on the enclosed registration form, which should be returned to IPS.

The course will be conducted between 9.00am to 3.30pm. Morning tea will be provided.

Course venue:

SYDNEY:
Green Room
Zenith Theatre and Convention Centre
Cnr Railway & McIntosh Streets
CHATSWOOD

WHAT TO DO IF YOU WISH TO ATTEND THE COURSE

Complete the enclosed (see note) registration form and mail or fax to IPS. After receiving your registration form, IPS will then confirm your place on the course.

(note) apply to Divisional Office for a copy

COST

The registration fee is $130 per person or $800 plus $50 per person for groups of more than 10. Payment should be made payable to IPS User Training Courses.

CANCELLATIONS

A full refund will be made for cancellations received in writing (letter or fax) by 6 September 1995, while a 50% refund for cancellations (in writing) will be made up to 13 September 1995. No refunds will be made for cancellations received after 13 September 1995.

Alternatively, if you are unable to attend, you may nominate another person.

HOW TO GET THERE

The venue is 2 minutes walk from Chatswood Railway Station.

Car parking is available for $3 in the State Super Car Park (entrance McIntosh St.). Note directions for Theatre Parking as you enter the car park (theatre parking on top level only).

For more information, please contact:

Lianne Grant
IPS Radio & Space Services
PO Box 5606 Telephone: +61 2 414 8305

Newsbriefs
NEWS BRIEFS

"The NSW Bush Fire Services has held crisis talks with the State Government, after the discovery of serious flaws in the new $15 million Government Radio Network (GRN), which failed during recent bushfires."

The network, which currently has 3000 users from 19 different government agencies was designed to replace 30 existing radio networks with a single integrated system. It employs a trunking system, where users queue for a number of frequencies set aside for the network. The downside is that it can lead to unacceptable delays in getting emergency traffic through.

According to the Sydney Morning Herald, when GRN was tested in the Gosford/Wyong area two weeks ago, only half of the fire vehicles were able to make contact with base. At Campbelltown, a fire control officer faced a four minute delay in getting through when one of his tankers overturned, trapping the driver.

A spokesman from the Department of Public Works attributed the problems to "human error from technicians".

****

What has been described as "a revolutionary wind-up radio --needing neither mains current nor batteries" is due to go into production soon in South Africa. According to its inventor, Trevor Baylis, 20 seconds of cranking will provide 40 minutes of listening time. He says he developed the radio after hearing a news report that blamed the spread of AIDS in Africa on lack of information.

Baylis developed the prototype back in 1992, but he had difficulty funding production, until his invention appeared on "Tomorrow's World" (the BBC equivalent of "Beyond 2000". The BBC World Service, Britain's Overseas Development Administration, and a South African firm put together about $300,000 to launch the project.

The radio will prove beneficial in parts of Africa where mains electricity is not available, and where the cost of batteries is prohibitive.

(As for the radio being revolutionary, hasn't a radio powered by either batteries, solar panels, or a hand-cranked generator been available in Australian Geographic shops for some years now?)

--Richard VK2SKY

****

MIR SPACE STATION UPDATE

German Cosmonaut Thomas Reiter, DF4TR, will join the Russian space station Mir, and operate signing DP0MIR, during the European Space Agency's ''EUROMIR 95'' mission beginning September 2, 1995.

Reiter will use the 2-meter FM rig aboard Mir during the 135 days planned for his flight. Primary frequencies to be used (preferably in split mode) are 145.800, 145.550, and perhaps 145.200 MHz.

QSLs for DP0MIR should be sent to DARC QSL bureau.

--ARRL Space Bulletin number 12

****

SUNSPOT CYCLE 23 BEGINS (?)

Astronomers at the California Institute of Technology say they have identified the first new sunspot in the next sunspot cycle.

Scientists at Caltech's Big Bear Solar Observatory in Big Bear City, California, photographed the spot on August 12.

"This makes us happy," said Hal Zirin, professor of astrophysics at Caltech and director of the Big Bear facility. "The sun is a

lot more interesting to study when things are going on."

Early in the 11-year sunspot cycle, sunspots appear rarely and at relatively high solar latitudes around 30 to 35 degrees, then increase in frequency and appear at lower latitudes until they reach sunspot maximum, Caltech said. After this peak in activity, the number of sunspots slowly declines, and they appear ever closer to the sun's equator until they reach a relatively quiet phase called sunspot minimum.

The sun has been in a quiet period through much of 1994 and this year, with a few spots showing up near the equator. The new sunspot found on August 12 appeared at a solar latitude of 21 degrees, and its magnetic polarity is opposite to that seen over the last decade, a key to identifying it as "the manifestation" of the start of a new cycle, Caltech said.

Scientists at Caltech said they expected an early beginning to Cycle 23, but not this early. "Sunspots in the new cycle should rapidly become more common and reach a high level of activity in 1998 or 1999," Caltech said.

IPS report
IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(18 AUGUST - 24 AUGUST)

SUMMARY

Date 18 19 20 21 22 23 24
10cm 72 72 71 71 70 74 77
A 8 10 6 3 9 11 (5 estimated)
T 17 14 16 14 18 35 12

SOLAR ACTIVITY WAS VERY LOW 18TH TO 23RD, AND LOW ON 24TH AUGUST.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET 18TH TO 19TH, AND QUIET TO UNSETTLED THEREAFTER EXCEPT FOR A BRIEF ACTIVE PERIOD EARLY ON 23RD AUGUST.

IONOSPHERIC F2 CRITICAL FREQUENCIES WERE MOSTLY NEAR PREDICTED MONTHLY VALUES. THERE WERE BRIEF ENHANCED PERIODS TO 40 PER CENT ON 22ND AND 23RD. SOME SPREAD F WAS OBSERVED ON 21ST, AND BRIEF SPORADIC E ON 22ND.

FORECAST

(25 AUGUST - 31 AUGUST)

SOLAR: LOW

GEOMAGNETIC: QUIET

IONOSPHERIC: NEAR PREDICTED MONTHLY VALUES WITH GOOD HF CONDITIONS.

COURTESY OF IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Club news: VHF-UHF DX Group
VHF-UHF DX GROUP

The last meeting of the VHF-DX Group at Amateur Radio House on 15 August was a workshop on the construction of transistor and valve linear amplifiers for 144 MHz.

Richard VK2ARS gave a interesting presentation on design considerations for VHF amplifiers. The lecture also discussed the available range of transisitors and valves suitable for home-brewing amplifiers from the 100 to 400 watt levels.

Working examples of valve and transisitor linears were also eshibited to show how practical construction problems are managed.

The group would like to take this public opportunity to thank Richard for his efforts.

The next VHF-DX Group meeting is scheduled for Tuesday 19 September at Amateur Radio House, starting at 7.30 pm.

All listeners are invited to attend.

Don't forget the Tuesday activity nights on 144 MHz and the group's Sunday morning net on 146.5 MHz FM starting at 11.00 am.

submitted by VK2FLR

Club news: Illawarra

The Illawarra Amateur radio Society held its Annual General Meeting and election of office bearers on Teusday 8th of August with the following people being elected on the executive committee.

President Simon VK2XQX
Secretary Rob VK2MT
Treasurer Dale VK2DSH
Committee Ned VK2AGV
Ken VK2KWG
John VK2ZLJ

A reminder for Club members and for visitors that Dale Hughes VK2DSH will be giving a talk with slides on his experience with the Antarctic Research team on the next club meeting.This promises to be an interesting evening so invite a friend.

Club news: Waverley

WAVERLEY AMATEUR RADIO SOCIETY

JUST A REMINDER THAT A DINNER HAS BEEN ARRANGED FOR 7:00 P.M. ON SATURDAY, 2ND SEPTEMBER AT THE ROSE BAY R.S.L. CLUB TO CELEBRATE THE COMPLETION OF THE SOCIETY'S 75TH YEAR. WE ARE HOPING THAT ONE OF OUR FOUNDING MEMBERS FROM 1919 WILL BE PRESENT AND ARE PLEASED TO ANNOUNCE THAT MICHAEL CORBIN, THE NSW WIA PRESIDENT, WILL BE OUR GUEST SPEAKER, SO THIS IS AN EVENT NOT TO BE MISSED. FURTHER DETAILS CAN BE OBTAINED FROM THE PRESIDENT, EDDIE, VK2BEH, ON 327-4118. THE COST WILL BE $28 PER HEAD.

PLEASE NOTE THAT ON THE SAME DAY, SATURDAY, SEPTEMBER 2ND, THE SOCIETY'S PREMISES AT VICKERY AVENUE, ROSE BAY, WILL BE OPEN DURING THE AFTERNOON FROM 1:00 PM, PROVIDING A GOOD OPPORTUNITY TO PURSUE PROJECTS OR TO USE THE CLUB'S LIBRARY AND EQUIPMENT. THIS MONTH IT IS INTENDED TO SHOW HOW TO SET UP AN "XT" COMPUTER TO OPERATE ON PACKET.

A NUMBER OF MEMBERS ARE INTERESTED IN FM-828 CONVERSIONS, SO THIS WILL BE THE PROJECT FOR THE FOLLOWING MONTH.

-- SIMON BUXTON VK2EII - PUBLICITY OFFICER

Club news: Gladesville

The Gladesville Amateur Radio Club Inc. is conducting educational and technical test transmissions on UHF Channel 35 (579.25 MHz) on Wednesday, Friday and Sunday evenings. Television Gladesville is a low power service, radiating omni-directionally from West Lane Cove, with 400 watts erp.

On Wednesdays and Sundays, the test transmissions are also relayed to the Central Coast via VK2RFM which is located south west of Sydney. The signal is transmitted to Oakdale on 444.25 MHz (Channel 16 UHF), and retransmitted to the Central Coast on 1250 MHz. There the signal is fed to the Central Coast ATV repeater VK2RTG and radiated on 444.25 MHz (Channel 16 UHF).

We welcome reports of coverage, and reception reports on a scale of 1 to 5. These reports may be given on the nights on listed repeaters, or by phone to the club on (02) 427 0530.

For further information, call the club on (02) 427 0530 any evening.

de Pat Leeper VK2JPA
Secretary

Club news: Blue Mts

The Blue Mountains Amateur Radio Club invites everyone to its September meeting. The highlight of this meeting is our guest speaker Ian Chennell, VK2IAQ. Ian, who is a member of the Blue

Mountains Amateur Radio Club, will be talking about aviation and radio. Ian flies a Hercules for an outfit in Richmond. I believe Ian will find an interested audience as a lot of us amateurs who don't fly have an interest in aerodynamics. Please come along and make it an interesting night.

The meeting will be on Friday, 1st September, 1995 at 8.00pm at Springwood High School, corner Grose Road and Chapman Parade, Faulconbridge; enter from Chapman Parade.

Refreshments will be served as usual.

Thank you

Alex, VK2ICL
Publicity Officer BMARC

Club news: A.A.T.C.

The Australian Amateur Television Club Inc. will hold the next meeting as usual on the 2nd Sunday of the month at 109 Wigram Street Parramatta. The AATC Inc. will be holding the monthly committee meeting tomorrow night - contact the Secreatry for further information.

Anyone interested in ATV is invited to attend for general information and general technical discussion relevant to ATV.

For more information about ATV contact Bob, the Publicity Officer, on (02) 587 3491 between the hours of 4.00pm and 10.00pm, Monday to Friday.

submitted by Bob Barnes, Publicity Officer

3701. Re: Drop Code? No Way!

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-29 00:00:00 UTC
From: gamma7@ix.netcom.com
Message-ID: <41uuk1$rfa@ixnews4.ix.netcom.com>
Source record: 239644

Is the code old? - Yes
Is it slow compared to today's digital technology? - Yes
Ae many other services dropping it? - Yes

But is it outmoded? - NO

I am not fond of the code, but I still like to use it in a while. It is one of those skills that one needs to have in "reserve." We are supposed to be the emergency communications backbone of our respective countries. When things get so bad that they need amateur radio communications, it may also mean that we need to use CW. It is a reserve skill that all amateurs that operate on the HF bands must have. They must also pass the appropriate CW test to get their license.

I am in favor of a graduated code test as you advance in license class. For instance, Novice and Tech Plus - 5 WPM, General - 10 WPM, Advanced - 15 WPM and Extra - 20 WPM.

Regards,

Duffy - WB8NUT

Interesting. The one on my bike really is a permanent magnet DC generator.
Does your bike have a battery to excite the stator coils of the alternator,
or does it depend on residual magnetism to get it started?

Hi there!

I'm a novice to the field of amateur radio, and have a few questions. I read through the FAQs, but didn't get the answers I needed, so I'll do it this way.

My brother is leaving to work in the bush in Africa, often at places where he will be away from a telephone for long times. We would like to keep frequent contact, and amateur radio is one of the things we are considering. Here are some questions:

1. For me (in Virginia) to talk to him in Africa, what would be the appropriate frequency band to work on? What licence would I need to operate on that frequency?

2. What kind of equioment would I need to make that kind of connection, and how much (roughly) would it cost me?

3. HOw dependable would it be, i.e. would we reliably be able to make contact, or would it be weather dependent and such? TO what extent is this fixable by a bigger (more expensive) transmitter/receiver?

I'd appreciate any useful comments you can generate.

> Does anyone have experience installing a mobile VHF antenna
> on a vehicle with a non-metallic skin?

Tom -

Having been a professional installer, I have some experience with this problem, but always in a situation where permanent mounting was the end result. Using aluminum air-conditioning tape, we'd create an "X" ground plane, and use the special NMO-type mounts for thick panels, backed-up by a fender washer.

We obviously also had complete access to the underside, too, which I am aware is a problem in the GM plastic-body cars because they use glue to hold the headliner, spaceframe, and body panels together (not to mention access problems from the spaceframe.)

FWIW, a friend of mine gave-up on trying to get an antenna on his Lumina Van and sold the thing.

I like the Saturn cars, and briefly considered one during my last car purchase. The "radio issue" kept me from doing it - not only are the plastic body panels a major challenge, I was really hard-pressed to figure-out someplace safe and convenient to put the radios!

A suggestion, though - you *might* be able to get a "disguise antenna" through your local professional communications shop; these have been tough to get lately. These look like and mount in place of the regular stock broadcast antenna (I *think* the Saturn uses a whip?). If you're looking for one band only, this is an easy way out.

3710. Secret Station on 30 Meters?

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-29 00:00:00 UTC
From: dfinley@newshost.aoc.nrao.edu
Message-ID: <41v78h$3gv@orion.aoc.nrao.edu>
Source record: 239653

Last night (Monday), I heard an interesting station on 30 meters.

It was on 10.1225 MHz, and came on the air at about 0100Z (Tuesday).
A CW station, it repeated WNNRG for a few minutes, then sent AUI
a couple of times, then began sending 5-character code groups.

I think I recall hearing this station before, but this was the
first time I actually bothered to sit and copy it for any time.

Anybody know what this is?

>Does your bike have a battery to excite the stator coils of the
alternator,
>or does it depend on residual magnetism to get it started?
>
One that I had a long time ago had a rotating permanent magnet, and a
single-phase stator coil. So I would classify it a "permanent magnet
alternator." A car alternator of course uses a DC electromagnet as the
rotor, first since a stronger magnetic field can be developed, and also so
the power output can be controlled by varying the excitation. A car
alternator also contains internal diodes to convert the output to "DC",
although of course there is still a lot of ripple. The bike alternator
contained no diodes, it's output was AC. It had two taps on the stator,
one nominally 12V for the headlight, and one 6V for the taillight. The
efficiency seemed to be very low, probably mostly loss of mechanical power
in the coupling to the wheel.

I think it would be less effort to carry around a 3-5 AH lead acid battery
than to obtain power from a generator, unless you want to be "off grid" for
several days at a time. Then solar cells may be a good idea.

If you do try a generator, the one I had also had one side of the output
connected to ground, so a conventional full-wave bridge rectifier while
also keeping the bike frame at DC minus is not practical. If it is just to

keep the battery topped-up, a simple half-wave rectifer with a single diode could be used. Even if the generator does produce DC, a blocking diode will still be needed. I would doubt that an elaborate charge regulator would be necessary, if you do it may make sense to make it a shunt regulator with an indicator that the battery is charged. Or just the indicator. Use Schottky diodes in the power path to reduce voltage (therefore power) loss in the rectifier. For the ultimate in efficiency, synchronous rectifers using power FETs could be built. These could include series voltage regulation.

But really, if efficiency is any concern at all, replacing the radio with one that uses less power is the best place to start.

Ah-h-h-h-h. Now we have a whole new class of "disadvantaged" to concern ourselves with. There is an excuse for everyone. If you have a handicap that is so severe as to prevent you from learning to copy code by any means, then I believe there are waivers which can be obtained from the FCC.

We will have thousands of such souls cropping up everywhere. Everyone wants some way out other than just bucking down and learning to copy it. I also suggest that a physician might be a more appropriate person from which to obtain diagnosis of such severe disability. Nothing like buying off on a supportive argument.

Sorry for the poke, guys -- but this whole discussion is, well, ... as someone pointed out in another thread somewhere -- there's just not enough meat left to get a fork into.

Fun problem. Kinda the same problem I've got with my
motorcycle.

About the best idea I've come up with is to mount a J-Pole
where by turn signals are. Maybe you could mount on the bumper or
hitch?

Nice thing about the J-Pole is you won't need a ground plane.
I've thought about making it out of whip stock, maybe an old CB antenna.

Good Luck

>
>1. For me (in Virginia) to talk to him in Africa, what would
>be the appropriate frequency band to work on? What licence
>would I need to operate on that frequency?

You have two choices, HF or satellite relay. The most likely
HF band would be 20 meters, but that varies with many factors
so you'd want some frequency agility to move up or down a
band as propagation dictates. A path also wouldn't be available
at all, at times. You'd need at least a General Class license
to do this. Satellite relay is another choice. Using the
amateur pacsats, which can store and forward Email, you could
keep in touch. This would require the Technician Class license.
The satellites are in low orbits, and you'd only get access to
any given one about twice a day, and so would he, but at a
different time, hence store and forward messaging.

>2. What kind of equioment would I need to make that kind of
>connection, and how much (roughly) would it cost me?

Somewhat in excess of $1000 for each end in either case. It
could be $5000 or more if you go first cabin. You're looking
at a HF transceiver, amplifier, and antenna or a VHF/UHF
transceiver, amplifier, TNC, computer, and antenna for satellite.

>3. HOw dependable would it be, i.e. would we reliably be able
>to make contact, or would it be weather dependent and such? TO
>what extent is this fixable by a bigger (more expensive)
>transmitter/receiver?

HF paths depend on the ionosphere, which depends on the Sun,
and other factors. It may be solid for days, or unusable for
days, it depends. Time of day matters too. You won't have
24 hour access, only certain times of the day will the path
be open. Satellite depends on orbital geometry. Unlike HF
propagation, it is very predictable. You'll be able to
schedule contacts weeks or months in advance with confidence.

>I'd appreciate any useful comments you can generate.

The most useful comment I can make is that amateur radio
isn't a good substitute for the telephone network. You
generally won't save money. However, if you want to take
it up as a hobby, it's rewarding, and you *can* use it
as a telco substitute in many instances. Lugging a major
HF or satellite station around in the bush isn't extremely
feasible, however. You can do it, but it isn't easy.
A pacsat station is probably easier, since the antennas
can be small.

(I've ignored QRP CW operations as an option, here. I don't
think it fills the need expressed.)

The way we put louvers in fiberglass deck lids, is to cut a hole
and fiberglass in some steel louvers.

Cut a hole in the body (an octagon would be good), and mount the antenna
above the glassed in metal ground plane.

Just an idea :-)

>dgordon@nrao.edu

I think 1885 khz is the main frequency for AM operation on the
160 band, however, AM can be also found just about every where
from 1850 khz and up. There's a group (gray hair net) meets
every night on 1945 khz, mostly 1 landers. Also notice a fair
amount of activity on the high end last winter around 1990 khz.

As a new offline searchtool with the most complete database of Internet Sit=
es
IRD will be available for downloading in autum 1995.

For keeping the database informations update --- new versions of the
database files will be committed regularily for updates----- we are looking
for people who are willing to moderate some topics of content.

Moderators should have the following credentials:

- You must have a full Internet account.
- You must be experienced with the Internet.
- You should command english fluently (more than I do :-))
- You should moderate a field in which you have experience with e.g.
Computers, Music , Gardening etc.
- You should like to communicate via Internet means and
- You should be prepared for high traffic volumes AND A LOT OF
VOLUNTARY WORK:

What will your work as a moderator be like:

- You will contact site owners or administrators , listowners or usenet gro=
up
moderators for update information about their sites. These descriptions and
your own experience with sites you have visited will lead to better
descriptions of all sites in your field of experience.
- Besides that you will be the contact person of all IRD users who have
questions or problems concerning sites in your field of experience. So you+=
ll
be able to delete sites which have gone or to update your connecting advice.

What you will gain by joining our moderators team:

- High exposure on the Internet
- Very much communication with people who like your work and are
thankfull for it.
- If thinks go well..... we+ll see.

If you are interested in more information about the project contact our
homepage.
Most informations about the IRD project are also available via our

Shortly I will be vacationing in Australia. I have made arrangements to obtain a VK call upon arriving there. I plan tp operate on 2M FM so I would be interested in knowing the 2M band plan for Australia. I would also like to obtain a 2M rep[eater list for my main area of travel which will be New South Wales.

Is there anyone in the Sydney area that I could contact, either a fellow ham, a frequency coordinator, or a club? Perhaps there are club meetings being held while I am there and I could attend.

Looking forward to operating as a VK.

A0 emission is a dead carrier. A1 is on off keying. I agree that it's highly unlikely that A1 emission will ever be prohibited on the bands, but many other emission types are permitted too, and there's no speed test for them. Perhaps there should be, but that's a separate issue.

The higher antenna will generally have a somewhat lower angle of
radiation, which is good for DX, but the beam has gain, and a
front to back ratio that allows you to sometimes null an interfering
signal. I'd give the beam, even at 25 feet, a slight nod as the
superior choice.

That's just general advice, site dependent factors, such as near
field clutter, could reverse that opinion in particular cases.

OVERVIEW
We are pleased to announce final plans for the 1995 DXpedition to Easter Island and Salas y Gomez. The radio amateur callsigns will be XR0Y for EI and XR0Z for SyG. The expedition is a multi-purpose, multidisciplinary project involving natural science, amateur radio, archaeology, and state-of-the-art computer-based communications. A major goal is to implement new techniques for using available high technology to enhance communications from remote sites. The total crew for both teams is 32 (18 radio amateurs plus scientific divers and support), and includes persons from the US, Mexico, Netherlands, UK, Switzerland, Belgium, and Chile. The expedition will be carried out by two separate teams operating simultaneously. One team will travel to Easter Island and establish a base camp and operations center on the north side of the island. The SyG team will sail from Chile directly to Salas y G�mez, 225 nm to the east of Easter Island. They will be helicoptered on the island, and remain there for approximately 6 days, subsequently returning directly to Chile. A variety of innovative computer-based communications techniques have been implemented for this DXpedition. It is planned to operate around the clock, using all bands and all communication modes legally allowed, including operations on 30 m and 160 meters, 6 m EME, slow-scan TV, RTTY and other digital modes, and a multiband HF beacon. An internet connection will enable daily uploading of log data, news, and other information to computers in the U.S. Radio logs, data, and others news will be communicated to the central site, from where it will distributed over Internet, FidoNet, PacketCluster, and other networks to various hubs, nodes, and individuals. Services for amateur radio include a network of anchor stations to distribute information locally, QSL cards mailed the day after the first QSO, automatic email confirmation of QSOs, a WWW site, public logs with a server for online confirmation, and an internet reflector for EI/SyG. The expedition will be documented in a book, video, and audio tape. The expedition is financed by contributions from participants, donors, and by the sale of souvenirs (coffee mugs, tee-shirts, photographs, etc.). Partial support has been provided by the radio, computer, communications, and travel industries. This expedition will be conducted in full compliance with the laws and policies of the Republic of Chile. We will respect the local rules and customs of Easter Island, and abide by all rules governing Salas y G�mez. TRAVEL SCHEDULE 28 Aug Salas y Gomez team leaves Valpariso aboard the Chilean Navy Ship 31 Aug Advance party arrives Easter Island 1 Sept EI beacon XR0Y/B on the air (thru 21 Sept.) 3 Sept Main team arrives Easter Island 5 Sept EI radio on the air as XR0Y (thru 19 Sept.) 6 Sept SyG team arrives on SyG 7 Sept SyG radio on the air as XR0Z (thru 11 Sept.) 10 Sept Vessel arrives EI 12 Sept SyG team leaves SyG 19 Sept SyG team arrives Valpariso 22 Sept EI team leaves EI TEAM (* Indicates the team

EXPLORERS CLUB AND THOR HEYERDAHL n 1947, the legendary Norwegian explorer
Thor Heyerdahl carried a flag of the Explorers Club with him on the raft Kon
Tiki. In 1955, Heyerdahl again carried the same flag on his archaeological
expedition to Easter Island. The flag can be seen in his book AKU-AKU. The
1995 Expedition to Easter Island will carry the same flag. Heyerdahl has sent
a message to the expedition: "It remains only to wish you and you companions
all the best of luck in your planned expedition. My best regards to your
entire group and not the least our Easter Island friends."
Thor Heyerdahl

SOUVENIRS
You can help support the EI/SyG expedition by purchasing one or more of our souvenirs. Each of these souvenirs is high quality. The mugs and tee-shirts are exactly the same as we are using on the expedition. Please help us by buying one of these nifty items. To order, send check made out to Cordell Expeditions, %KK6EK, 4295 Walnut Blvd., Walnut Creek, CA 94596.

Available now:
- Mug ($15)
- Tee-shirt ($15)

Available Oct. 1, 1995:
- Audio tape ($15)
- Color prints (3 8x10) ($20)
- Color slides (20) ($20)
- Rock from Easter Island ($10)

Available early 1996:
- Book by KK6EK ($25)
- Video ($25)

CALLSIGNS
XR0Y Easter Island
XR0Z Salas y Gomez

RADIO SCHEDULE
1-21 Sept XR0Y/B Beacon QRV from Easter Island
5-20 Sept XR0Y QRV from Easter Island

7-11 Sept XR0Z QRV from Salas y Gomez

OPERATING FREQUENCIES
The DXpeditions will transmit on or near the following frequencies. The listening frequencies will be announced on the air.

---Easter Island XR0Y--- ---Salas y G�mez XR0Z---
CW SSB RTTY CW SSB RTTY
1824.5 1845 - - - -
3525 3795 3680 3540 3760 3590
7025 7065 7080 7040 7060 7090
10115 - 10108 10104 � 10104
14025 14195 14080 14040 14260 14090
18075 18145 18102 18080 18160 18109
21025 21295 21080 21040 21260 21090

28025 28495 28180 28040 28460 28190

6 m 50.105
SSTV 14.230 Robot 72
HF Satellite (RS-12) Tx: 21.225/Rx: 29.425
UHF Satellite (AO-10,AO-13) 435.505 up/145.890 dn B mode

Beacon 14.100 Beacon sends callsign CW at 100 W,
XR�Y/B 18.110 then a steady tone for
21.150 1.5 s at 100, 10, 1, and 0.1 W,
24.930 then moves to next higher frequency.
28.200 The cycle repeats once per minute.

REAL SIGNAL REPORTS PLEASE

We request exchange of real signal reports, rather than the normal "59" or "599" DXpedition report. This will slow the rates some, but we need the information to study propagation. DUPING INVITED We invite you to dupe the expeditions in order to help us study propagation, but please do it only on different band-days. If there is a big pile-up, please be considerate of others who have not yet worked the DXpedition. We will be logging with a CT network, so we will know if you are a dupe. e-QSLs For all logged QSOs, a "Congratulations" e-mail message will be sent to you automatically, if you are in the QRZ database maintained by Fred Lloyd AA7BQ. To add yourself to the database, either send an e-mail message
To: updates@qrz.com
Message: comqrz_update your_callsign your_email_address

or log into the WWW site with the URL

http://www.qrz.com

NEXT-DAY QSLS

For a station's first QSO with the expedition, a printed QSL card will be put in the U.S. mail to you within 24 hours after the QSO, if we can find a valid mailing address in the available callbook. QSL MANAGER

Mary Ann Crider WA3HUP
2485 Lewisberry RD.
York Haven, PA 17370

THE QSL BARCODE

Your QSL card will contain a printed barcode which contains all the information about the QSO. It can be read by standard readers capable of handling Code-39 barcodes. The purpose of the barcode is to facilitate future processing by validating agencies such as the ARRL/DXCC. INTERNET CONNECTION We will have a fully functional node on the internet in our camp on Easter Island. However, the line belongs to NASA, hence we cannot release the IP-address directly. We have established an intermediary site at ve7tcp.ampr.org, courtesy of Lyndon Nerenberg VE7TCP. e-MAIL ADDRESS You can pass comments directly to the expedition using the following IP address. We may or may not have the time to answer you directly.
easter@ve7tcp.ampr.org

WWW PAGES

The expedition is presented in a series of pages on the World Wide Web. These show maps, lists of people, latest information about the expedition, etc. During the expedition the pages will be updated daily. The URL for the site is http://ve7tcp.ampr.org/DX/easter.

REFLECTOR

We have established an internet reflector for Easter Island/Salas y Gomez. This reflector is available for discussing any aspect of the islands and the expedition. Anyone who subscribes can read and post messages to all other subscribers. To subscribe, send an email message to:

To: easter-island@the-courtyard.com.
Subject: SUBSCRIBE <---Note: Not in Message: area!
Message: (blank)

To send any message, use

To: easter-island@the-courtyard.com.
Subject: Your_title
Message: Your_message

PUBLIC RADIO LOGS

During the expedition, you can verify that you are in the radio log by logging into the WWW site (see above), and going to ﷺAm I in the radio log?ﷺ. There you will see a dialog box where you can enter any callsign. The server will respond with the log data, if it exists. ANCHOR STATIONS We have a group of stations who will act as ﷺAnchors.ﷺ They will receive and distribute information from the expedition (primarily through internet), and pass information to us on the islands. You are invited to pass comments to them for relay to us. AA7MH Shep Shepard hsheps@primenet.com EI7DNB John Barry jbarry@curia.ucc.ie F6AJA Jean-Michel Duthilleul

I believe they are called AEI tags in the railroad industry. They are commonly used to tag cars and can be read at high
speed by trackside scanners. Sorry I don't have any manufacture info for you but railroads might be another place
to look for leads...

Amtech in Dallas builds the tags for the railroads.

BC>>No hams USE a bloody carbon mike.

CM>If you don't like carbon mikes then how about a $1 crystal mike
CM>and a $0.20 Op Amp to modulate that single transistor transmitter?

I didn't say that I didn't LIKE them. The other OM claimed that an FM transmitter was easier and simpler to build than a simple CW transmitter. Rather silly, eh?! :-)

CM>I'm not pulling your leg. In the past, telephones used carbon
CM>microphones and that's where a lot of hams got theirs. We used them
CM>for single/double tube AM and FM transmitters. I still have some in
CM>my junk box. If the FCC allowed new hams to use FM, I guarantee you
CM>there would be a lot of new hams on FM with transmitters no more
CM>complex than CW transmitters. Why do they subsidize CW? Why don't
CM>they allow freedom of choice of modes?

Er, I think new hams CAN use 10m FM with the NOCODE TECH license, can't they? I don't hear any of them using carbon mike FM xmtrs though!

CM>>How did you ever get a ham ticket?

If you are going to continue with any more rude and stupid questions I will just twit you, but since you seem to be curious, I will tell you: I got my first license at the age of 16 (minimum in the UK in 1968!) by taking a 12 wpm code test at one place and taking a theory test that involved drawing schematics of transmitters, and essay type answers. None of your easy American, multiple-choice, memorize the answers stuff! I later moved here and studied hard and got the amateur extra in 1978.

CM>When you were still in diapers, my parents drove me 200 miles in a '46
CM>Chevy with no AC to the nearest FCC office in Houston where I passed
CM>with flying colors in front of an FEE examiner and became W5DXP.

Brag all you want. I took two buses and a train 60 miles down to London to get mine, and I bet you got there quiker in your 46 !!

CM>Mensa brains are unaffected by your temper tantrums.

Pfft! Obviously you have faulty ESP also! Try a DSP filter for your "Mensa brain!" :-)

I'm sure it took a real mensa brain to come up with demanding a 5 wpm speed limit for CW, he he!

73, AF4K, WB4FPH, G3XLQ/W4, G3XLQ, A4941

The early telegraphers sent "HO HO" to each other to indicate a laugh. In the American Morse, H is di-di-di-dit, just as now. "O" on the other hand is sent dit small space dit. IE not .. but . . So HO HO would be ...., Thus Ho Ho becomes HiHi in International Morse..

>hence, no rfi to the navcomm stuff INSIDE the fuse. EZ huh?

Well, it's not *that* easy. First of all the "cell" phones you find on
the planes are not "cell" phones in the same sense. They are designed for
use in planes. The phone service you find onboard planes and cruise ships
are NOT the same cell phone system you use when you call from your car or
your hand-held cell phone.

ISSUED AT 29/2330Z AUGUST 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 29 AUGUST AND FORECAST FOR 30 AUGUST - 01 SEPTEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 78/17

GOES satellite data for 28 Aug
Daily Proton Fluence >1 MeV: 1.7E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.6E+07 (normal)
X-ray background: A5.5
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
30 Aug 31 Aug 01 Sep
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 30 Aug: 78/17

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled, apart from active
levels 09-12UT.

Estimated Indices : A K Observed A Index 28 Aug
Learmonth 11 3224 2232
Fredericksburg 15 5
Planetary 12 5

Observed Kp for 28 Aug: 1112 2221
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
30 Aug 10 Quiet to unsettled
31 Aug 6 Quiet
01 Sep 6 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
29 Aug normal normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
30 Aug normal normal fair
31 Aug normal normal normal
01 Sep normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
29 Aug 38 15-30% enhanced, with night-time Spread F.

Predicted Monthly T index for August: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
30 Aug 30 15-30% enhanced.
31 Aug 30 15-30% enhanced.
01 Sep 30 15-30% enhanced.
COMMENT: Darwin MUFs: mostly near predicted monthly values, with some
night-time Sporadic E layer.
Townsville MUFs: near predicted monthly values.
Hobart MUFs: 15-30% enhanced during the local day, with night-time
Spread F.

Are there any ARES groups out there that have looked at forming themselves into non-profit corporations?
We in Cumberland County, New Jersey, are looking into this posibility now, and would like to be in contact
with other groups that are thinking on this line.

Please contact me with any info.

ARLX048 Accident on Montserrat

ZCZC AX18
QST de W1AW
Special Bulletin 48 ARLX048
From ARRL Headquarters
Newington CT August 30, 1995
To all radio amateurs

SB SPCL ARL ARLX048
ARLX048 Accident on Montserrat

Bobby Martin, VP2MO, has been seriously injured, and his wife, ''Mae'' Martin, VP2MN, has died in an accident on the island of Montserrat.

The two had temporarily relocated to Antigua following volcanic activity that began on the island in late July. They were back on Montserrat where the accident, involving an automobile and a British military vehicle, took place on Sunday, August 27.

Bobby Martin has been hospitalized at Hoberton Hospital on Antigua and, although seriously injured, is expected to recover, according to those who have spoken to attending physicians there.

Most residents south of Montserrat's volcano (Soufriere, 3000 feet high) have been relocated to the north side of the tiny island, farther away from danger. The volcano continues to ''rumble and spew ash,'' according to Perry Brittain, VP2MR/W5STI.

Bobby Martin has been well known for many years as one of the Caribbean's most active amateurs. In 1990 he received a British knighthood for his work following Hurricane Hugo, which devastated Montserrat in September 1989.

Stories about Montserrat appeared in QST for March 1990 and February 1991.

A funeral for Mae Martin was expected to be held sometime this week, on Montserrat.

Charlie, the July 1995 issue of 73 has a letter to the editor about E-Mail and he states his E-mail address is:

profusion@aol.com

The next sentence after the address, he stated, "I don't encourge its use because it's slower than fax to reach me." So, good luck on getting anything to him. 73's Floyd WD5ENJ

3751. Re: TM-742A

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-30 00:00:00 UTC
From: ae4ko@magicnet.magicnet.net
Message-ID: <422o1o$fmh@comet2.magicnet.net>
Source record: 239494

Rick Edwards (rick.edwards@mogur.com) wrote:
: I have a new 742A. It is a great radio! I enjoy it very much.
: However, I do have a couple of questions that I can't seem to find the
: answer to in the manual. Maybe you can help me.

: 1) When using the autodialer, the button sequence is PTT, PF, & then the
: autodialer memory number (#1 in my case). The transmitter turns on when
: the PTT is pressed, of course, but then turns off when the PF button is
: pressed and then back on for the DTMF string. However, there is no (or
: very little) pause between the transmitter turn on and the sending out
: of DTMF. I use two repeater autopatches and neither of them likes this
: and it _usually_ results in a misdial. Question: Is there anyway to
: add a pause or a brief wait between the transmitter turning back on and
: the output of DTMF?

As I remember, the '*' or '#' key produces a pause, but I don't have the
man here and I don't use this feature much. (for all I know, those keys
produce '*' or '#' tones! <grin>)

: 2) When using the 742A in a crossband repeat mode between a 220
: repeater and my 2m HT, I have to wait for the 220 repeater to drop
: before I can transmit. This becomes a real drag when on a roundtable
: on the 220 repeater and it has a long hang time. Is there anyway
: around this? Is there a way to make the 742A act like a single
: frequency repeater on the 2m side (ie. sample the receive every few
: hundred milliseconds)?

One way to do this is to put the 742 in a one-way crossband mode and
listen to the output on the handheld (assuming you have a handheld
capable of listening on 220 in your example.)

The only other way that I know of is to enable CTCSS decode on the 742
and hope that the repeater passes tones, i.e., only transmit a tone
when the input is active. In this way, when the other users are done
talking, the CTCSS decode squelches the radio thereby switches to a
listening mode on the other input. Otherwise you are stuck with the
squelch tail of the repeater!

: Thanks....<re>

Those of us who are members of 10-10 Int. now have a mailing list
for 10 meter interests.

If you wish to subscribe to it, email:

listserv@lehigh.edu

and use as the body of the message:

SUBSCRIBE TENTEN-L <name> <callsign>

e.g.

SUBSCRIBE TENTEN-L John Doe K5FJZ

No subject line is needed. It will probably be best if you DO NOT
attempt to include any other info in this bit of email.

==========

The stated purpose of the list:

"The 10-10 mailing list is open for discussion of subjects relating to
10-10 International and 10-meter amateur radio operation......<snip>....
does not limit the topics for discussion and questions, so long as
10 meters, 10-10, and amateur radio are the focus."

You don't have to be a member of 10-10 to participate in the list,
although some of us who 8are* might try and recruit you. :-)

You have a much higher opinion of Mr. Green than I do! If the quality of the magazine is any measure of the man, then there may be a trend. Look at a copy of 73 from the late 70's & early 80's compared to the trash produced today! If I see one more article on how to build a J-Pole I'll lose it altogether! Wayne has been reading his own stuff for so long that he is actually starting to believe it. The only thing that Wayne is interested in improving is his balance sheet. After all,..his ego couldn't get any larger.

Yup, CW is not outlawed on 2 meters or the other bands.
Just use a multi mode radio and have a go at it. Or check the
use chart and find a place where F2 is allowed and use a code
practice oscillator into the mic. jack.

Notably 50.0 to 50.1 and 144.0 to 144.1 Mhz are CW only.

>I'm pretty new at ham radio, and I'm wondering:
>is there anywhere someone with a Tech license can
>practice CW on the air?

Yeah, anywhere you want. In fact, the first .1 MHz of the 6 and 2
meter bands are reserved for CW (_not_ MCW). Seriously doubt anyone
would be listening for bona-fide continuous wave on VHF and up,
though; then again, I'm new to ham radio, too, so don't take my word
for it on that last point.

; ac082@freenet.carleton.ca (Charles Hunter)

Charles,
Wayne Green will be at Hamcon this weekend. If there is no answer to the
question before then I will ask him and reply next week.

3764. NEED HELP WITH RF EMMISSIONS PROJECT!!!

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-30 00:00:00 UTC
From: bwalker@ro.com
Message-ID: <421u6l$b16@central.ro.com>
Source record: 239507

Please post any replies to 'bwalker@ro.com', rather than back to the newsgroup.

I am a high school student who's in the process of developing a computational science project dealing with the conflict between RF emmissions and motorized wheelchairs. Being in a wheelchair myself, and dealing with amateur radios, I know and have experienced the affect of a wheelchair being around a transciever. You know, all the buzzing and static that comes across, like power lines.

If you have any experience with RF, or know of any good internet references that deal with the subject, I would appreciate it if you would e-mail me at bwalker@ro.com with the info.

Thanks,

--

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 30/2330Z AUGUST 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 30 AUGUST AND FORECAST FOR 31 AUGUST - 02 SEPTEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 77/16

GOES satellite data for 29 Aug
Daily Proton Fluence >1 MeV: 3.1E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 5.4E+06 (normal)
X-ray background: A6.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
31 Aug 01 Sep 02 Sep
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 31 Aug: 78/17

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 29 Aug
Learmonth 4 2221 1111
Fredericksburg 6 13
Planetary 10 14

Observed Kp for 29 Aug: 3344 2232
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
31 Aug 6 Quiet
01 Sep 6 Quiet
02 Sep 6 Quiet
COMMENT: Unsettled to active levels are expected 4-6 Sep, due to a
recurrent coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
30 Aug normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
31 Aug normal normal normal
01 Sep normal normal normal
02 Sep normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
30 Aug 37 15-40% enhanced.

Predicted Monthly T index for August: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
31 Aug 35 15-40% enhanced.
01 Sep 35 15-40% enhanced.
02 Sep 35 15-40% enhanced.
COMMENT: Darwin MUFs: mostly near predicted monthly values, with
regular Sporadic E layer.
Townsville MUFs: mostly near predicted monthly values.
Hobart MUFs: mostly near predicted monthly values, with night-time
Spread F.

Any Yaesu FT-840 users out there?
Want to share any mods?
I have the mod for all-band transmit from 1.8 - 30 MHz
if anyone needs it. I already did mine and it works fine into a dummy
load, but I did notice it cuts off below 1.8 MHz. Not that there is any
reason to use it to transmit down there... Maybe one watt on 1750 meters
but that is not the ideal us for a FT-840 anyway! I have a few things
I wish were better, like no front-panel sidetone level adjustment.
That is a bit annoying when you want to adjust the radio for different
environmental situations. Also, the NB doesn't seem to do much.
Wish I could buy the AM filter and the 500 Hz CW filter. Maybe later...

Any other comments?

-------------Response

Alex: The ARRL has an info package that should help you.

I have operated on 2m FM only once in VK and that was in
1987, so I do not recall much about it, except that their
2m splits are different than ours.

You can also obtain your license by mail.

A couple of years ago I saw a posting of a phonetic alphabet where
all of the words had a different sound than the letter the stood for.
Example the word for the letter E was Eunuch. If anyone has a copy of
this I would appreciate a copy by Email.
Thanks Steve WV6U sjhawk2@srv.pacbell.com

3776. Wanted: Equipment donations for school radio clubs

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-30 00:00:00 UTC
From: little@pecan.enet.dec.com
Message-ID: <422oib$b42@nntpd2.cxo.dec.com>
Source record: 239519
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc,sci.electronics

The radio clubs of School District 15 are looking for equipment donations.
In particular, we are looking for test equipment, HF or VHF transceivers,
and a low profile or vertical multi-band HF antenna, although other
equipment is always welcome. All donations are tax deductable and
will help students learn about electricity, electronics, and radio
communications. Test equipment does not necessarily need to be
in working order, although basket cases and very old non-working
equipment will probably not get used (I only have so much time to spare
to fix things.)

Please contact me at little@pecan.enet.dec.com or call (708) 202-1030 for
more information.

73 es tnx,
Todd
N9MWB

PS I will consider personally picking up the cost of shipping in certain
situations.

new
>style in Amateur Radio, I thought I would present this handy guide to
radio
>nerd-dom. The following is what I call: "How to sound like a LID in
one
>easy lesson."
> Step One: (Long text has been deleted)

> Step Thirteen: You hear someone on the repeater giving directions
to a
>visiting amateur. Even if the directions are good, make sure you
break-in
>with your own "alternate route but better way to get there" version.
This
>is most effective if several other LID trainees join in, each with a
>different route. By the time the amateur wanting directions
unscrambles all
>the street names whizzing around in his head, he should have mobiled
out of
>range of the repeater. This keeps you from having to stick around and
help
>the guy get back out of town later.
> These thirteen easy steps should put you well on the way to
Lid-hood. I
>hope these helpful hints will save you some time in your quest to
sound like
>the perfect Lid.
> 73,
> Rusty Bumpers, N4LID
>
> (Rusty Bumpers is a pen name. He maintains anonymity so he can
sit
>peacefully at club meetings and avoid the wrath (and breath) of the
>uninformed.)

Let me add:

Step 14: If you are over 50 years in age and someone ask you "how is everything going", or "How have you been", be sure and go into a long boring description of every sickness that you have or have ever had. Make sure you explain in detail all the gory details and how stupid the doctor. If you are a REAL LID, this one sided discussion should take no less than 45 minutes. If the person you are talking to changes the subject, you are a true LID if you always bring the discussion back to your aches, pains, cancer, your wife's medical and female problems, etc. Remember a true LID sticks to the boring medical discussion and never talks about anything interesting.

3784. Background noise using HTX-202 mobile

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-30 00:00:00 UTC
From: Allan Spitzer <aspitzer@ccmail.gsfc.nasa.gov>
Message-ID: <42228h$8vi@post.gsfc.nasa.gov>
Source record: 239527

During recent qso's from my car, I have been told that I have a lot of background noise. The noise sounds like I have the windows open even though I do not. The noise disappears when the car is stopped, even if the engine is still on. I am using an HTX-202 with a 5/8ths wave mag-mount.

I was thinking about trying an external mic, but I have a sneaking suspicion that the noise is engine related (the car is a new Civic).

Any suggestions would be appreciated.

Thanks,

Allan N3TCM

No, NOCODE TECHs can NOT use 10-meters, either FM, SSB, AM, or CW.
10-meters is considered HF (below 30 MHz), and access to HF bands requires
code.

Dave

P.S. Err, just how do you build a FM transmitter using a carbon mike
directly? I'm aware that you can build an AM transmitter by amplitude
modulating a carrier directly via absorption modulation using a carbon
mike (and you can get some real nasty RF burns on your lips this way, too!).
However, I'm not sure how you would change the frequency (at least, in any
predictable way) by using a carbon mike. Hmmm, you might be able to
directly modulate an FM signal using a capacitive microphone.

>the same airline offers cell phone service to its passengers using
>a credit card? Any logic here?

In fact, cell phones cannot be used from *any* aircraft, not just
airlines. The reason? When in the air, your little cellular transmitter
can hit multiple cells over a very wide area, confusing the heck out
of the cellular system. It has the potential of crashing the cellular
computers.

The phones on the airlines transmit to special systems designed
for the purpose. They aren't cellular.

Congratulations. You've found a numbers station. The 5 character groups you heard are actually cut numbers. The best supposition is that those are transmissions to spies, using one-time pads to decode the message. (At least, that's the most entertaining.) Nobody knows what those things really are except the governments, and they aren't talking.

: If a phone number is decected active in two cities, the software may
: assume that a second 'clone' of the phone is being used. If this happens,
: the most logical action for a carrier to take is to temporarily shut down
: your phone number, and force you to either change the number or the
: phone (ESN) to make the clone unusable. If it happens more than once,
: a carrier may safely assume the following:

: 1) You used your phone in a plane, a clear FCC violation
: 2) You have been targeted by shady characters as a prime target
: to repeatedly tack their cellular bills onto.
: 3) You are in possession of a second 'clone' of the phone,
: invalidating anti-cloning security measures to protect other
: customers.

: Wouldn't ANY of the above would be enough reason for a carrier to cancel
: your account?

I can give you my experience using cellular phones on aircraft. Back when
these first came out, there were no directives on using them vs.
not using them on aircraft.

So, of course, we used them !

I was able to use my phone fine when in a large metro area like Dallas,
but since you are moving so quickly you get out of the carriers area so
soon it's not worthwhile.

Also, I did plan one call somewhere over North Texas, which
simultaneously connected me to (at least) 3 different carriers. The
call went through, but I simultaneously got 2 other busy signals !!

(I have assumed that 2 other cell sites tried to connect the call,
which had not connected as quickly as the site that actually connected
the call.)

The kicker was that ALL THREE billed me a daily roaming charge of $3 !

Since then the airlines have all asked not to use cellular phones on
the plane, and I have respected their wishes.

BTW, the 'clone phone security' comes up again. This doesn't explain why
they don't want you using them even at the gate, while you are firmly
planted on terra firma. I think the interference issue is plausible, and
the last thing I want is to give the pilot problems while I'm on board.

From: william@cortex
Message-ID: <420f3g$on0@medulla.ama.ttuhsc.edu>
Source record: 239556

BTW, I downloaded 18 USC 1029 off the net. (Easiest way is by WWW - Search on Yahoo with keys Law and USC)

Chap 18 Sec 1029 deals with fraudulent access devices with "intend to defraud". Each paragraph includes the "intent to defraud" clause.

I would be hard to defraud myself, but perhaps I've already done it.

This section really didn't apply to cellular phone though Curt.

Note paragraph (e) " The term access device means any plate, card, code, account number, or other means of account access that can be used, alone or in conjunction with another access device, to obtain money, goods, services, or any other thing of value. "

"The term unauthorized access device means any access device that is lost, stolen, expired, revoked, canceled, or obtained with intent to defraud."

It'd be hard to steal from myself.

So, If we apply Curt's logic, if I access my Internet account from any computer other than my primary one, (say I have one at the office) and I clone my own password, then I get the Secret Service called out.

Seems that 18 USC 1029 really is a pretty broad statute Curt, and applies to all types of piracy....credit cards, phone access codes, computer passwords, and I would expect cellular ESN's. But an essential element here is that most courts would have a hard time convicting you of defrauding yourself.

What?

Sheezz - you want a social security number instead? Since when is a call sign required to give an amateur radio Usenet posting any credibility? Last time I checked there was no requirement to use an assigned callsign here at all - let alone every ten minutes.

I did about three minutes of research and came up with KF4AEE. I don't know if it's the *right* Rick Smith in Florida but it didn't take long to find it. Besides - callsigns identify stations, not operators - but we seem to forget that.

Keep in mind that 30 meters is a SHARED band ... we do not have exclusive
use of it and must, in fact, not cause harmful interference to
non-amateur users of the band.

I've heard all sorts of wierd things on the band ... I haven't the
faintest idea what half of them are. But I try to stay clear of them!

3805. CDE Rotors

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-30 00:00:00 UTC
From: rwiley@magnus.acs.ohio-state.edu
Message-ID: <rwiley.20.30441D24@magnus.acs.ohio-state.edu>
Source record: 239565

I have a question which I'm somewhat embarrassed to ask (given how much tower climbing I do).

I was recently given a CDE rotor (and some other goodies too) by a local ham who sold his property. The rotor (I'm told) is about 9-10 years old. The problem is 1) the terminal on the bottom of the rotor is cracked and 2)I don't know what model of rotor I'm dealing with.

The questions are 1) where does one go to obtain a terminal plate for such a rotor, and 2) how does one identify which rotor I'm working with?

All I know for sure so far is: the control box is a typical CDE control box with a gold-colored meter and the rotot itself does have a brake. I might need to replace the solenoid on it, but I'll find that out later.

I'd appreciate it if anyone could lend any knowledge on this matter or suggestions. Thank you.

For an ok program in DOS I run FaxTalk Plus. In Windows WinFax Pro V4 is wonderful. Faxtalk is a lot less powerful, but works well. It lets you set up regions and polling. It's scheduling feature to fax at night, when the rates drop, is very easy to use. It is not the fastest in converting graphics and does not do OCR (like WinFax Pro).

Oh, for crying out loud! Your trunk lid, hood, and roof are metal. A
magnetic mount antenna will work on any one of them.

I used a 144 mHz. 5/8 wave mag-mount for over two years before I
installed a 2m/70cm antenna with an NMO mount in the center of the trunk
lid. (Yes, I did cut a hole using a chassis punch. I wasn't as painful
as I though, since the end result is a clean installation.)

Hello,
I'm creating a contest prog. and I would like to know how to have the
distance between two qra locators.
73, Pierre ON4KNN

3812. The real HI HI (HI HI).

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-30 00:00:00 UTC
From: k1oik@ccsnet.com
Message-ID: <7966207978701@ccsnet.com>
Source record: 239572

Here is a response I got when I asked why HI HI is used:
<HI HI>

BF> Can someone tell me why hams say the above in VOICE conversation?

Yes,

1. It is an abbreviation of two hiccups for those who are hiccup
impaired (or should I say challenged?).

2. A verbal expression accompanied by a royal wave of the hand when
when addressing one's subjects. (Ilusions of grandeur)

3. They haven't laughed in so long they have forgotten how to
verbalize "Ha Ha".

4. They are learning disabled and confuse "Hi Hi" with "Ha Ha"

5. Prestige. It makes one sound like an "old timer" whose
Daddy gave him a straight key to cut his teeth on.

6. "HI HI" - I'm trying to laugh, but I don't know how.

Tom, N4GYS

3813. Ham radio Primer

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-30 00:00:00 UTC
From: k1oik@ccsnet.com
Message-ID: <7966208002002@ccsnet.com>
Source record: 239573

The following was received via RelayNet (available by calling Bob Baker's BBS at 385-3427) from Scott Cole, I had nothing to do with writing it, but it is clear that there are some hams who really understand the rest- Burt Fisher, K1OIK.

DICTIONARY FOR THE NEW AMATEUR RADIO OPERATOR.!

With the arrival of the new licensing regulations, we eagerly anticipate an influx of new amateurs. Those who tune in for the first time may be surprised to discover that the current inhabitants of the airwaves appear to be communicating in a language which bears only a passing resemblance to English. For the benefit of the newly licensed, the following is intended as a primer in this mysterious form of communication.

WE

It is not generally realized that, as the result of an obscure clause in the licensing regulations, the holder of an amateur radio licence becomes plural immediately upon receiving the licence. This is a privilege that was formerly reserved for royalty ("We are not amused"), but with the advent of radio has been extended to all licensed amateurs. Thus, before you became licensed you would say "I am driving down the road". Once licensed this becomes "We are driving down the road".

Roses are red
Violets are blue
I'm schizophrenic
And so am I (we)

HI (or HI)

A hangover from the days of CW communication, this was intended to convey a laugh in code. In audio communications the use of this expression means either:

a) The joke I (we) just told was so unfunny that I (we) find it necessary to draw your attention to my (our) pathetic attempts at humour.

b) I (we) suspect that the modulation on my (our) radio is so poor that it is unable to reliably reproduce the sound of a laugh.

SHACK

Be it ever so humble, all non-mobile radio equipment is housed in a "shack". Even though many of our wealthier brethren have megabucks of real estate devoted to the hobby, it is still referred to by this unfortunate epithet. Perhaps a hangover from the arrival of indoor plumbing, when the budding ham was left with a redundant outdoor structure in which to house his equipment?

SILENT KEY

Passed over, passed away, ceased to be, gone to Glory, gone to that great ham shack in the sky, moved to Moncton! Obviously amateurs are as coy as the rest of the population when it comes to uttering the "D" word. Actually, since the introduction of voice transmission, the vast majority of the amateur population are silent when it comes to keys.

BAREFOOT

Originally a method of ensuring that the operator would provide a reliable path to ground in the event that he came into contact with a lethal source of power (see Silent Key above), this now refers to running a transmitter without the addition of an external power amplifier.

TWISTED PAIR

Thought by many to refer to two strange individuals given to certain unusual (and,in some communities, illegal) practices, this is actually a complex way of saying "telephone". Fortunately not in common use outside the ham community, or the Bell Twisted Pair Company would probably not have attained the position that it now enjoys.

XYL

The feminists favourite! It means "Wife" or, more likely, "The Wife" (eX Young Lady - XYL! Get it?). It's not entirely clear whether this intended to imply that the person in question is either no longer young, has ceased to be a lady, or both. Presumably with the current high incidence of divorce (yet another possible bi-product of your new found obsession with Amateur Radio), there are also a number of XXYLs out there. Habitually referring to your Spouse in her presence as "The XYL" has been known to hasten this process.

HARMONICS

The unwanted bi-product of an oscillation. For some reason this has now come to mean "children". Obviously the term was coined by someone who didn't have any because houses containing them are rarely harmonious.

73

Chosen for its rhythm in morse, this means "Best wishes". It takes the same number of syllables to speak it as "best wishes" so no real time penalty. This one is now metamorphosising into "Best 73s" which translates to "Best best wishes's"

88

"Love and Kisses". Chosen for who knows what reason. Usually employed by YLs and XYLs (see above), this should be utilized with care by all who do not fit either of these categories!

807

A type of vacuum tube popular as a power output device a few years ago. This term is now used as a reference to beer - presumably because the glass bottle of the 807 bears absolutely no resemblance to a container for the Golden Throat Charmer!

"Q" CODES

These are three letter codes, all starting with the letter "Q" which are ciphers for complex phrases. My personal favourite is - "Shall I point my searchlight nearly vertical on a cloud, occulting if possible, and when your aircraft is seen deflect the beam upwind and on the water or land to facilitate your landing?" Needless to say, this one is not in common usage among amateurs!

With the introduction of audio transmission, the codes became redundant, but there are still those out there who speak the codes as a means of separating the cognoscenti from the uninitiated.

QSL

Originally "I acknowledge receipt", now:

1. A way to say "Yes" using three syllables instead of one.

2. An alternate to "Roger", the single most popular name among amateurs (Roger, Roger).

3. The amateur equivalent of a "Big Ten-four".

4. A reference to those little pieces of card with call letters on them which are totally unknown to certain Scottish members of our group.

QSO

This is supposed to mean "Can you communicate with .... direct or by relay?" but has now been converted into a word (pronounced KEWSO) to substitute for "chat". Thus, once licensed, you no longer chat to a friend, you have a Kewso with him (or her). Worse yet, if this conversation were to take place without the aid of radio, it would become an "Eyeball Kewso"! There is very little evidence of serious or lasting optical damage as a result

of this strange practice, although it has been publicly condemned by the College of Ophthalmic Opticians. However, until he gains experience, the new ham is advised to wear protective eyewear for his first few "Eyeball Kewso's".

QSY

Officially "Please change frequency to ---kHz." On 2 metres now used to indicate that you are moving (QSYing) to another repeater.

Harder to say but much more satisfying.

QRT

Officially either "I am ceasing transmission" or "Please cease transmission". In audio it becomes "going QRT". See also "Going clear" (not to be confused with transparent).

QRU

It means "I have nothing for you". If you have nothing to say, why say it? (Because the two metre band would be totally silent if we all did that, that's why!)

QTH

Yet another advantage of your licence. You no longer have a house, apartment or address - you now have a QTH! Actually, it's supposed to mean "What is your position (or My position is) in latitude and longitude (or according to any other indication)."

Other people merely live in your town - you have a QTH there.

3814. The real Lid

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-30 00:00:00 UTC
From: k1oik@ccsnet.com
Message-ID: <7966208005903@ccsnet.com>
Source record: 239574

Downloaded from RelayNet by K1OIK

HOW TO SOUND LIKE A LID by Rusty Bumpers, N4LID
On two meters lately, I have noticed a tendency of people making a concerted effort to sound like a lid. Since this appears to be the new style in Amateur Radio, I thought I would present this handy guide to radio nerd-dom. The following is what I call: "How to sound like a LID in one easy lesson."
Step One: Use as many Q signals as possible. Yes, I know they were invented solely for CW and are totally inappropriate for 2 meter FM, but they're fun and entertaining. They keep people guessing as to what you really meant. I.E. "I'm going to QSY to the Phone". Can you really change frequency to the phone? QSL used to mean "I am acknowledging receipt", but now it appears to mean "yes" or "OK". I guess I missed it when the ARRL changed the meaning. Also, it's best to use OK and QSL together. Redundancy is the better part of Lid-dom.
Step Two: Never laugh, when you can say "hi hi". No one will ever know you aren't a long time CW ragchewer if you don't tell them. They'll think you've been on since the days of Marconi.
Step Three: Utilize an alternative vocabulary. Use words like "destinated" and "negatory". It's OK to make up your own words here. "Yea Bill, I pheelbart zaphonix occasionally myself."
Step Four: Always say "XX4XXX" (insert your own call) "for I.D." As mentioned in Step One, anything that creates redundancy is always strongly encouraged. That's why we have the Department of Redundancy Department. (Please note that you can follow your call with "for identification purposes" instead of "for I.D." While taking longer to say, it is worth more lid-points.)
Step Five: The better the copy on 2 meter FM, the more you should phonetically spell your name, especially if it is a short and/or common one. I.E. "My name is Al...Alpha Lima" or "Jack...Juliett Alpha Charlie Kilo." If at all possible, make up unintelligible phonetics. "My name is Bob...Billibong Oregano Bumperpool."
Step Six: Always give the calls of yourself and everyone who is (or has been) in the group, whether they are still there or not. While this has been unnecessary for years, it is still a wonderful memory test.
Step Seven: Whenever possible, use the wrong terminology. It keeps people guessing. Use "modulation" when you mean "deviation" and vice-versa.
Step Eight: If someone asks for a break, always finish your turn, talking as long as possible before turning it over. Whenever possible, pass it around a few times first. This will discourage the breaker and, if it is an emergency, will encourage him to switch to another repeater and not bother you.
Step Nine: Always ask involved questions of the person who is trying to

sign out. Never let him get by with a yes or no answer. Make it a question that will take a long time to answer.
Step Ten: The less you know about a subject, the more you should speculate about it on the air. The amount of time spent on your speculations should be inversely proportional to your knowledge of the subject.
Step Eleven: If someone on the repeater is causing interference, you should talk about that person at great length, making sure to comment on at least 4 out of 6 of the following: (1) His mental state; (2) His family; (3) His intelligence, or lack of same; (4) His sexual preference; (5) His relationship to small animals; (6) His other methods of self entertainment.
Step Twelve: If you hear two amateurs start a conversation on the repeater, wait until they are 20 seconds into their contact, and then break-in to use the patch. Make sure that it's only a simple routine phone call. It's also very important that you run the autopatch for the full three minutes. This way, once the two re-establish contact, they won't even remember what they were talking about.
Step Thirteen: You hear someone on the repeater giving directions to a visiting amateur. Even if the directions are good, make sure you break-in with your own "alternate route but better way to get there" version. This is most effective if several other LID trainees join in, each with a different route. By the time the amateur wanting directions unscrambles all the street names whizzing around in his head, he should have mobiled out of range of the repeater. This keeps you from having to stick around and help the guy get back out of town later.
These thirteen easy steps should put you well on the way to Lid-hood. I hope these helpful hints will save you some time in your quest to sound like the perfect Lid.
73,
Rusty Bumpers, N4LID

(Rusty Bumpers is a pen name. He maintains anonymity so he can sit peacefully at club meetings and avoid the wrath (and breath) of the uninformed.)

3815. The ham called Barbie.

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-30 00:00:00 UTC
From: k1oik@ccsnet.com
Message-ID: <7966208009204@ccsnet.com>
Source record: 239575

I received the following message which says it all. By the way I coined the term "Barbie ham" to describe those hams that the old farts license when they go into the schools and run ham classes in which rarely even one kid EVER gets on the air or own equipment. The Barbie Hams are all for show.

From: ERIK BAGBY
To: BURT FISHER
Subj: INTERESTING HAMS-WHERE?

I wish you guys could come to Atlanta!! I am a 17 year old ham and have been licensed since 1985- and let me tell you how much I cannot agree more with you guys!! I have demonstrated amateur radio for SEVERAL of my classes- never seen so many confused and bored people. I mean, let's get real here- why would the average young person want to get into a hobby full of social oucasts when they can get into computers, drugs, booze,you name it!! I got into ham because I've got radio in my blood- but not everyone is like me!! And hey, we've got so many of those "barbie dolls" down here- just listening to all those old fart gutter scum talk about how their daughter passed her Tech is hilarious. I never hear them on the air! No wonder I put up a GMRS repeater- people can actually understand the concept of that!!
73's from the armpit of the south,
Erik M. Bagby/KB4TPP

3816. What hams can do that men cannot?

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-30 00:00:00 UTC
From: k1oik@ccsnet.com
Message-ID: <7966208002505@ccsnet.com>
Source record: 239576

WHY MEN ARE BETTER THAN HAMS

1) They can go all night doing something worthwhile.

2) Their rubber ducky works but the ham's part doesn't.

3) They are ALWAYS communicative in a real way.

4) If they get boring you can always hit the belly button.

5) They have no problem with "Frequency."

6) They are alive.

7) You don't want to "squelch" them.

8) They can be "reprogrammed" to act human

9) A ham will tell you all men's secrets that they never experianced
for themselves

10) Their "transmitters" are never empty.

OK OK Im ducking sorry sorry sorry, I couldn't resist!!!

Are y'all still gonna ever speak to me!!!!!

I 'pologize! Honest! Sincerely! Would I lie?????

~ SLMR 2.1 ~ Don't confuse me with facts.

3817. The real Wayne Green.

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-30 00:00:00 UTC
From: k1oik@ccsnet.com
Message-ID: <7966208005206@ccsnet.com>
Source record: 239577

It is one thing to one thing to be a preacher of unpopular causes
but one ought to be one of character when one preaches character and
strength. Wayne Green in his magazine would make you think he is the
LOrd and can save us all-if we would only listen to him. Much of what he
says in his column, if implemented, would save this country and amateur
radio. It is unfortunate that the man is all BS. At the last two New
England A.R.R.L. Conventions his entire presentation was self serving.
His presentation was filled with his accomplishments in the area of CDs
(music), his new book on declaring war on our economy, his
accomplishments as a DXer and his phoney call to action for the young in
amateur radio. When he tells you of his exploits as a rare DX station,
he also tells you how he worked stations in the thousands in a few
hours- of course he also encourages his listeners to TALK to DX stations
not just a 30 second signal report contact. Thus I guess when Wayne
decides to get on a "QSO run" that is OK, but the rest of us must live
by Wayne's preaching? His interest has nothing to do with saving
America, helping our youth and/or amateur radio. His interest is in
making more money for Wayne Green and he knows his audience of docile
hams will never speak up. He tells us of how he was on this governors
committee and that commission BUT he is all talk, no actual action. He
further supports many of his arguments with half truths (as lawyers say
"facts not in evidence").

Wayne is not as stuffy as the old men from the A.R.R.L. but at
least those men are real men. Let me leave you with this quote from
Charles E. Wilson:

I have always liked bird dogs
better than kennel fed dogs
myself-you know, one that will
get out and hunt for food rather
than sit on his fanny and yell.

>And amateur builders and designers have replaced the slide rule with a
>computer for the most part today as well.

It's surprising that I still play with my old Picket slide rule (vintage
1974) given that I am reluctant to learn CW beyond 5 WPM!

Actually, I'm surprised calculators are not BANNED (in favor of slide rules)
on all amateur radio theory exams given the morbid fascination with CW!

Kevin, n9sqb (inactive)
Yep...I still lurk, and rarely post.

Hi,

I would like to know the price of IRC: International Reply Coupon
in your country, and where can I buy it in your country.
Especially, I'd like to know: Asian countries, U.S.A, Canada,
European countries, but any country is welcome.

In Japan, one IRC consts 130 yen (approx. US$1.30),
and you can buy it at the central post office.

Please respond by e-mail.

Good reply Clark,
I am CONSTANTLY having to use my "un-blocked" TS-440S as
a synthsized HF generator (all modes). I used my IC-2AT and W2A "un-blocked"
as a stable 99-999 Mhz source. After all I paid for these I EXPECT to use
them as often as possible. But then I might be in the minority,
actually fixing and building...

3823. Need help with VOX/MIC/PTT interface circuit

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-30 00:00:00 UTC
From: stickler@seminole.iag.net
Message-ID: <422dea$ika@news.iag.net>
Source record: 239583

Help!

I just bought one of the new Radio Shack VOX headsets, and it works great with my HT, but I also plan to use it with my HF rig. I had no problem hooking up the headphone and mic connections to the HF rig, but the PTT has me stumped.

The HF rig has a stereo jack designed for use with an eletret PTT hand microphone. The base sleeve is common ground for the MIC and PTT circuit, the tip is the PTT connection and the center sleeve is the MIC connection which also provides +8VDC for the eletret microphone element.

The headset has a mono plug. The base sleeve is ground for the MIC and the tip is the MIC input. The headset provides its own power for the VOX circuit and MIC, so the +8VDC from the rig is not needed and I've inserted a capacitor in line to isolate the headset MIC from the rig power.

The problem is that when the VOX activates, the impedance between the headset plug tip and sleeve drops from 4Kohm to 1Kohm -- which my HT is happy with, but the HF rig is not and will not key the transmitter as it doesn't sense a complete short between the PTT connector and ground.

It seems clear that what is needed is a relay circuit that senses the change in impedance and activates a relay that keys the transmitter, but what is the best way to do this?

Any and all suggestions will be greatly appreciated.

Regards,

Patrick Stickler

I've been asked to repost the following message for a fellow ham...

Subj: Re: Help with posting?
Date: 95-08-30 09:28:29 EDT
From: cbrown@thor.lostnet.org (Christopher E. Brown)
To: sffuom@frog.thpl.lib.fl.us (Arjay Morgan)

Sorry to bother but could you post this for me? The ISP's
nntp server likes to forget about incoming posts, have not
been able to get it to accept an article in near 2 weeks.

Subject: RCA MCA39AA11B Info needed
Newsgroups: rec.radio.amateur.equipment
Summary:
Keywords: RCA AMP Transistor
X-Newsreader: TIN [version 1.2 PL2]

Greeting all, I am looking for data on the final amp sections of an
RCA MCA38AA11B 155 mhz transciever. I am turning it into a 2 meter
amp (give a bit of a boost to the HT) and am trying to find
safe drive levels etc...

The first trasnistor in the string is a

7794-1 7803
then a
7795-1 7815
then a
7796-1 7707
and finally a pair of
7797-1 7815

Would any of you have the specs on these avail?? I have tried to find
locally
but I do not have the books and hte local library is well short on
anything
electronic related.

Also there is a small pin on the bottow of the amp near the power inputs
that just runs to the circut board just to one side of the transistors. I
assume this is the bias supply, if so how many volts are needed for proper
operation? I assume bias should be applied only when the amp has input
and
the output is connected to the feedl;ine via the relay. Right??

3825. TM-742A

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-30 00:00:00 UTC
From: rick.edwards@mogur.com
Message-ID: <9508300930443619@mogur.com>
Source record: 239585

I have a new 742A. It is a great radio! I enjoy it very much.
However, I do have a couple of questions that I can't seem to find the
answer to in the manual. Maybe you can help me.

1) When using the autodialer, the button sequence is PTT, PF, & then the
autodialer memory number (#1 in my case). The transmitter turns on when
the PTT is pressed, of course, but then turns off when the PF button is
pressed and then back on for the DTMF string. However, there is no (or
very little) pause between the transmitter turn on and the sending out
of DTMF. I use two repeater autopatches and neither of them likes this
and it _usually_ results in a misdial. Question: Is there anyway to
add a pause or a brief wait between the transmitter turning back on and
the output of DTMF?

2) When using the 742A in a crossband repeat mode between a 220
repeater and my 2m HT, I have to wait for the 220 repeater to drop
before I can transmit. This becomes a real drag when on a roundtable
on the 220 repeater and it has a long hang time. Is there anyway
around this? Is there a way to make the 742A act like a single
frequency repeater on the 2m side (ie. sample the receive every few
hundred milliseconds)?

Thanks....<re>

From: jersbak@cpcn.com
Message-ID: <425334$h3c@netaxs.com>
Source record: 239337

I am interested in finding out what colleges/universities in the Northeastern U.S. (or all of the U.S) have ham radio clubs. I'm a junior in high school, and would like to know what college ARCs there are out there, and whether or not they have a clubstation.
Any help, however little would be appreciated, and I'm not just interested in ARRL affiliated college ARCs.
Please send all responses to "jersbak@cpcn.com"

73s and Good Luck,
Jamie Ersbak AA3JZ

(I have been a ham for 2 years, and live about 2 miles northwest of Philadelphia. Thanks again!)

communications reserve of the State of California
Governor's Office of Emergency Services

RB394 Volunteers-Images & Issues 7/7 Release Date 9/4/95
Continuation:

You won't get good professionals unless you deter and ease out the prima donnas. Never let any volunteer group be the tail that tries to wag the dog. Groups are outsiders detached from government. [This series refers to units where the people are signed up with you (as emergency manager) to work for, and with, YOU." They work for YOU through your Radio Officer.]

Such unpaid volunteers may seem special and different. In a way, they are, but also there are more of them out there than we realize. It is well worth the effort to reach out and find them.

It is reasonable to ask for and expect long term commitment of any potential applicant. This alone may be the most effective point to dissuade "joiners." Make it clear that every volunteer will be working with paid professionals; thus we expect every volunteer to be equally professional.

A potential volunteer must be told all of this before applying and being accepted for unpaid employment. Doing so minimizes problems and misunderstandings down the road. It is a good idea to put these expectations in writing before anyone is given an application. The State of California Auxiliary Communications Service uses such a two-page definition of expectations. This approach maximizes a long term relationship and productivity with and by each unpaid professional.

In summary, a COMMUNICATIONS VOLUNTEER IN GOVERNMENT is an unpaid agency staff member who serves typically two or more times a month in task oriented work or assignments. This is a person who meets the criteria that we would employ that person if budget was no object. Their work or service may be either in or away from the office; that depends upon the individual's skills and duties. Such volunteers are expected to attend reasonably required training and meetings that will keep the Radio Officer and assistants informed, up-to-date and integrated into the daily

affairs of the agency.
Series end.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 31/2330Z AUGUST 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 31 AUGUST AND FORECAST FOR 01 SEPTEMBER - 03 SEPTEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 76/14

GOES satellite data for 30 Aug
Daily Proton Fluence >1 MeV: no data available
Daily Proton Fluence >10 MeV: no data available
Daily Electron Fluence >2 MeV: no data available
X-ray background: no data available
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
01 Sep 02 Sep 03 Sep
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 01 Sep: 75/13

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 30 Aug
Learmonth 3 2111 0211
Fredericksburg 3 5
Planetary 10 7

Observed Kp for 30 Aug: 1331 2121
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
01 Sep 6 Quiet
02 Sep 6 Quiet
03 Sep 10 Quiet to unsettled
COMMENT: Unsettled to active levels are expected 4-6 Sep, due to a
recurrent coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
31 Aug normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
01 Sep normal normal normal
02 Sep normal normal normal
03 Sep normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
31 Aug 31 Near predicted monthly values until 11UT and 15-30%
enhanced thereafter.

Predicted Monthly T index for August: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
01 Sep 30 Near predicted monthly values during local day and
15-30% at night.
02 Sep 30 As for 01 Sep.
03 Sep 30 As for 01 Sep.
COMMENT: Darwin MUFs: mostly near predicted monthly values, with
occasional Sporadic E layer.
Townsville MUFs: near predicted monthly values.
Hobart MUFs: 15-30% enhanced until 11UT, with night-time Spread F.

Actually, quite a few of us VHF weak-signal-chasers/DXers hang around the
calling frequency of 144.200 looking for others using either SSB or CW.

Dave

P.S. There's also the satellite bands on 2 meters, 70 centimeters, etc where
quite a bit of CW gets used.

Marcel E. Durieux (med2p@dayhoff.med.Virginia.EDU) wrote:
: Hi there!

: I'm a novice to the field of amateur radio, and have a few
: questions. I read through the FAQs, but didn't get the answers
: I needed, so I'll do it this way.

: My brother is leaving to work in the bush in Africa, often at
: places where he will be away from a telephone for long times.
: We would like to keep frequent contact, and amateur radio is
: one of the things we are considering. Here are some questions:

: 1. For me (in Virginia) to talk to him in Africa, what would
: be the appropriate frequency band to work on? What licence
: would I need to operate on that frequency?

If you want to be able to communicate with a minimum of
expense and technology, you'll want a license that provides
you with HF priviledges. Therefore, at least a Novice or
Tech+ ticket. You'll be limited to relatively "poor" portions
of the HF bands, however, because of interference from SW
broadcasters, and will be able to use only CW on bands below
10M. Assuming that you want phone (voice) on the lower HF
bands, you'll need a General licence.

: 2. What kind of equioment would I need to make that kind of
: connection, and how much (roughly) would it cost me?

Good used HF rigs can be purchased for $300.00 or less. Add in
a wire antenna, and an antenna tuner for a few bucks more, and you'll
be set. You won't win any contests, but you'll be able to achieve
relatively good contacts.

: 3. HOw dependable would it be, i.e. would we reliably be able
: to make contact, or would it be weather dependent and such? TO
: what extent is this fixable by a bigger (more expensive)
: transmitter/receiver?

We're at the low point in the current sunspot cycle, which means that
communications aren't as easy or reliable as they were 5 years ago. There
will be times when you'll won't be able to make contacts, and times when
it will be wonderful. More power doesn't necessarily mean that you'll
be able to make contact - when a band is closed, nothing you do will make
a difference. The typical HF tranceiver puts out 100 watts, which should
be plenty. Different bands have different characteristic: 20 meters
is typically a "daytime" band, while 40 and 80 meters are more usable
at night.

I'd suggest contacting the American Radio Relay League in Newington, CT. They have free information packages that will tell you more about the Amateur service, licensing requirements, etc. For example, you'll want to find out whether your brother can even get a licence in the country he'll be traveling to - the ARRL will help you out with that question, and more.

>the last thing I want is to give the pilot problems while I'm on board.

Hello Doc:

This might give you an idea of why the airlines have the mentality that they do toward cellular phone use - even on the ground. of course they make their own policy about use "at the gate", which the FAA says is OK. But not during taxi. Most crewmembers are probably not aware of the FCC rule regarding prohibited use in flight, but just follow company policy - as they are required to.

The following is excerpted from Advisory Circular 91.21-1 from the Federal Aviation Administration. It is not the entire AC but offers the FAA's "suggestions" for airline policies regarding cellular phones and some other devices. Of course this is here for everyone's reading enjoyment, not just Dr. Biggs.

Quote from FAA Advisory Circular:

6. RECOMMENDED PROCEDURES FOR THE OPERATION OF PORTABLE ELECTRONIC DEVICES ABOARD AIRCRAFT.

a. If an operator allows the use of portable electronic devices aboard its aircraft, procedures should be established and spelled out clearly to control their use during passenger-carrying operations. The procedures, when used in conjunction with an operator's program, should provide, as a minimum, the following:

[stuff edited for space]

(6) Prohibiting the operation of any portable electronic devices during the takeoff and landing phases of flight. It must-be recognized that the potential for personal injury to passengers is a paramount consideration as well as the possibility of missing important safety announcements during these important phases of flight. This is in addition to lessening the possible interference that may arise during sterile cockpit operations (below 10,000 feet).

[My note - "sterile cockpit operations" include any ground taxi away from the gate.]

(7) Prohibiting the operation of any portable electronic devices aboard aircraft, unless otherwise authorized, which are classified as intentional radiators or transmitters. These devices include, but are not limited to:

(i) Citizens band radios.

(ii) Cellular telephones.

(iii) Remote control devices.

b. Portable electronic devices designed to transmit have considerations in addition to paragraph 6a. There are certain devices which, by their nature and design, transmit intentionally. These include cellular telephones, citizens band radios, remote control devices, etc. These devices are typically licensed as land mobile devices by the Federal Communications Commission (FCC). The FCC currently prohibits the use and
^^
operation of cellular telephones while airborne. Its primary
^^^
concern is that a cellular telephone, while used airborne, would have a much greater transmitting range than a land mobile unit. This could result in serious interference to transmissions at other cell locations since the system uses the same frequency several times within a market. Since a cellular mobile telephone unit is capable of operating on all assignable cellular frequencies, serious interference may also occur to cellular systems in adjacent markets. The FAA supports this airborne restriction for reasons of potential interference to critical aircraft systems. Currently, the FAA does not prohibit use of cellular telephones in aircraft while on the ground if the operator has determined that they will -not cause interference with the navigation or communication system of the aircraft on which they are to be used. An example might be their use at the gate or during an extended wait on the ground, while awaiting a gate, when specifically authorized by the captain. A cellular telephone must not be authorized for use while the aircraft is being taxied for departure after leaving the gate. The unit must be turned off and properly stowed, otherwise it is possib1e that a signal from a ground cell could activate it. Whatever procedures an operator elects to adopt should be clearly spelled out in oral departure briefings and by written material provided to each passenger to avoid passenger confusion.

c. Those telephones which have been permanently installed in the aircraft are licensed as air-ground units and are operated on the allocated or assigned air-ground radio telephone service frequencies. In addition, they are installed and tested in accordance with the appropriate certification and airworthiness

standards. These devices are not considered portable electronic devices provided they have been installed and tested by an FAA-approved repair station or an air carrier's-approved maintenance organization and are licensed by the FCC as air-ground units.

End quote.

Note that my underscore in 7b is under a sentence that the FAA printed in bold face - it is their emphasis.

Hams do not make that decision.
And if you think votes are the way to go why not
let your neighbors vote whether you should have a tower.

I operate an 840 and have had it for about 5 months. Not a bad radio, but you are correct it does have some quirks. I don't mind the xcieve being wide on CW since I use a Timewave DSP. The tuning shaft does not seem as sturdy as it should for a "mobile" radio. I also wish the offset receive and transmit freq were BOTH displayed rather than just showing the freq. of the currently operating mode (TX or RX). The audio is a little low on output power also. (I guess I am sensitive to this since I use the output to drive the DSP and the level is barely high enough) The transmit mod using the TP2003 works fine on mine also. I do not like the AM (160M) sound. I think it sounds to boomy on captured transmitted signals. It is a nice radio, but it has it faults.

Message-ID: <424h1p$c5h@nntpd.lkg.dec.com>
Source record: 239448

Yeah, I did it. I built a box that has:
a jack for the Mic line from the DC
a jack for the Phones line from the DC
a jack for a shielded cable to the MIC jack of IC2AT
a jack for a cable to the PHONES jack of the IC2AT
a PTT switch right on the box
a resistor that pulls enough current to key the IC2AT.
Plug the DC into the box, hook the box to the IC2AT with a couple of
cables. When you push the PTT on the box OR THE IC@AT, you can
talk with the DC.

If you want more details (like resistor value), I can look.

Regards,

Rex Lint K1HI, N5523G

Date: 1995-08-31 00:00:00 UTC
From: billo88@aol.com
Message-ID: <424j2i$g62@newsbf02.news.aol.com>
Source record: 239451

I had the same problem with my icom-751a with "funny" rf
feedback....Seems like the problem was the sm-20 mic I was using, after a
couple of years of use some of the UNUSED wires in the mic cord at the
plug were touching the audio wire. I rewired and resoldered the correct
wires and trimmed back and taped up the unused wires in the mic cord.
I also had rf feedback years ago with the same icom when my shack was
on the 2nd floor of an apt. I had to use extra chokes on all wires
entering the radio....speaker, mic and tape recorder....it cleaned it
up.....hope this helps. bill ac4lc

That is a very, very good point. I have volunteered to help the local police track down jammers on their 150 mHz frequencies, and was called in to do so at one point. THis is the flip side of the coin. Many of us have (or could easily build) a quad for 2 meters and learn how to use an HT to DF. IF/WHEN these bozos use ham HT's to jam police or public service, we can help out. I believe that this is one of the most powerful things we can do to help preserve respect for amateur radio among politicians and public workers....a pretty important group to have on our side.

3849. The Hamblaster Moon Filter

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-31 00:00:00 UTC
From: willco788@aol.com
Message-ID: <423j07$bsv@newsbf02.news.aol.com>
Source record: 239454

The moon filter is DOS software package that includes a binary file.
A binary file is actually software that is uploaded to the Hamblaster.
Once it's loaded into the DSP RAM, The DSP runs a filter program
and communicates to the PC via the Hamblaster handshake port.

Here's some technical data

moon.doc 21:04:23 5/30/1995

The moon filter is a very narrow band linear phase filter capable of
producing a 1 Hz bandwidth with a transition region of 1/2 Hz providing 60
dB attenuation. The bandwidth is adjustable in powers of 2 providing a
maximum filter bandwidth of 256 Hz with 128 Hz transition region.

The filter center frequency is tunable in fractional Hz increments.

The filter can be phase locked to the input signal to provide variable
bandwidth tracking of the input signal as the frequency drifts due to
the variation in propagation delay due to atmospherics or due to
receiver or transmitter instability.

A "cartwheel" tuning display provides important filter tuning information
at a glance and also is useful for displaying signal strength. Three
oscilloscope
displays are also available.

The Signal to Guard is a dual trace display that shows the signal strength
verses
guard band. It's useful for analyzing band conditions and sweeps in
real time
using a 486-66 DX2 with the turbo button turned off.

The Signal Vs AGC is a dual trace display for checking the AGC level. It
will be
used to adjust the ACG (an AGC control will be available in a future
version)

The Signal vs Tuning is a dual trace display for accurately tuning the
filters center
frequency. The tune trace indicates dc voltage level of the
discriminator algorithm
and when the voltage is too high or low, the filter is mis-tuned

There's also a code regenerator that works very well even when a 32 Hz
filter is selected.
The regenerator is an oscillator that's keyed with a signal detector.
When it's enabled,

the background noise and filter ringing is completely removed. It's the first regenerating
filter that works well with weak signals.

Other controls include; volume, input gain, filter tune, filter bandwidth and display

> I just finished building a Sly Fox Fox-Hunt Transmitter Kit from Ramsey
> Electronics (FHT-1).

Richard -

Interesting. This kit was delayed from release for many, many months. I'm happy to hear that it's out and that you had good results. You're absolutely right, Ramsey kits are not for first-timers. I also hope that you were able to use a spectrum analyzer to perform the final tune-up; this particular circuit is not spectrally clean unless carefully tweaked.

Did you get another crystal for a frequency besides the advertised 146.520? The people at Ramsey were told a number of times that putting an automatic - much less potentially unattended - beacon transmitter on the National 2m Calling Channel was a really, really poor idea.

Of course such a petition isn't binding on anyone. That isn't
to say it has no value. Plebiscites are a good idea...
just as long as I don't have to call some 900 phone number ;-)

From: mikemiller@dsm1.dsmnet.com
Message-ID: <424vif$5c7@dsm6.dsmnet.com>
Source record: 239458

I recently installed the EX-205 transverter controller in my ic730 and, without a transverter to attach to it for testing, I notice that I have no HF receive - just white noise. I did try the HF transmitter on 10 meters at lowest power with a scanner as a monitor - works fine. I redid the whole ex205 installation again (kinda of a knucklebuster) with no luck. The radio works fine without the ex205 installed. Anyone have some hints/ kinks to check? All replies gratefully accepted.

Allan,

Call ICOM America at 206-454-7619, press " 3 " when the automated system answers. You will then be connected with ICOM's parts dept. They have a manual titles the " CI-V Reference manual " for sale at a cost of about $15.00 plus shipping. This manual has the commands for the IC-R7100. Newer ICOM radios now have the command set for the radio right in the operators manual so it is doubtful the CI-V Reference Manual will ever be updated

QST de W1AW
DX Bulletin 46 ARLD046
From ARRL Headquarters
Newington CT August 31, 1995
To all radio amateurs

SB DX ARL ARLD046
ARLD046 DX news

This week's bulletin was made possible with information provided by Joe, K8JP, Tedd, KB8NW, Joe, NJ1Q, the OPDX Bulletin, and Contest Corral column from QST. Thanks to all.

GET WELL, BOBBY. Well know DXer, Sir Bobby Martin, VP2MO, was involved in a serious automobile accident on Montserrat while retrieving radio equipment as part of the evacuation effort. Bobby's wife was killed in the accident. Bobby was airlifted to Antigua, has undergone surgery and is showing signs of improvement. Check the INDEXA information session on 14236 kHz at 2330Z for updates.

SRI LANKA, 4S. HB9BRM, will be active September 14 to October 3 as 4S/HB9BRM on 80 through 15 meters. QSL to home call.

NEPAL, 9N. Roger, G3SXW, should be active as either 9N1SXW or 9N1/G3SXW September 12 to 21. This will be an all band CW only effort. Try 1827, 3507, 7007, 10107, 14023, 18073, 21023, 24893 and 28023 kHz, QSX up 2 to 5 kHz. QSL direct to G3SXW or via the bureau.

ZAIRE, 9Q. Joe, G3MRC, is on as 9Q5MRC. He has been on 18081 kHz around 1845z. Joe also has plans to operate from Burundi, 9U. 9Q5TR can sometimes be found on the 14226 DX Net at 2230z.

TURKS AND CAICOS ISLANDS, VP5. Nob, JA7AYE, is signing VP5/JA7AYE. He has been heard on 14010 and 14195 kHz throughout the day. Also check 7016 kHz at around 0315z. QSL via JA7ZF.

SAINT PIERRE AND MIQUELON ISLANDS, FP. K9GS, ND9O, N9AU and W9OP will be active October 25 to 31. They will sign TO5M during the CQ WW SSB Contest. Outside of contest hours they will sign FP/home calls. QSL to K9GS for all calls via CBA.

MADAGASCAR, 5R. JF1MGI has rescheduled his DXpedition. It is now to take place during October and November.

ALAND ISLAND, OH0. OH2BDA, will sign OH0BDP September 11 to 17 on CW and SSB. QSL via OH2BDA.

CAYMAN ISLANDS, ZF8. Tosy, JA6VZB, and Seiji, JH6RTO, will be on from Little Cayman signing ZF2TY/8 and ZF2SF/8, respectively, September 24 to 28. CW, SSB, RTTY and SSTV is planned for this all band effort. On September 28 and 29 they may be active from Grand Cayman. QSL ZF2TY via JA6BSM and ZF2SF via JH6RTO. Buzz, N5FTR, will be active on 40, 20, 17, 15 and 10 meter SSB September 3 to 9. QSL via his CBA or the W5 bureau.

SAINT MAARTEN, PJ7. Mike, K6URI, will be on as PJ7/K6URI September 9 to 23. Listen for his CW and SSB on 40, 20 and 15 meters. QSL via K6URI.

ANTIGUA, V2. Stephen, WF2S, will be active as V26Z September 17 to 30 on CW and RTTY. He will be in the CQ WW RTTY Contest. QSL via WF2S. Bob, W2KKZ, will be signing V26Y September 24 to 30, mostly on CW. QSL via W2KKZ. Some Frankford Radio Club members will activate V26B in the CQ WW SSB Contest October 28 and 29. Outside contest hours, listen for N3BNA as V26A, WT3Q as V26B, N3ADL as V26DX, AB2E as V26E, KA2AEV as V26R, K3MQH as V26T, WA2UDT as V26U, KF3P and WB2P. QSL via home calls except V26A via WB3DNA.

CALL SIGN NEWS. SM7HCI reports new novice licenses will be issued in Sweden. Listen for SH, SI and 7S calls on 3.5, 7, 21 and 28 MHz.

THIS WEEKEND ON THE RADIO. The International Straight Key Contest and ARRL Hiram P. Maxim Birthday Celebration are this weekend. Check August QST page 58 and September QST page 127 for details.

Yeah, I did it. I built a box that has:
a jack for the Mic line from the DC
a jack for the Phones line from the DC
a jack for a shielded cable to the MIC jack of IC2AT
a jack for a cable to the PHONES jack of the IC2AT
a PTT switch right on the box
a resistor that pulls enough current to key the IC2AT.
Plug the DC into the box, hook the box to the IC2AT with a couple of
cables. When you push the PTT on the box OR THE IC@AT, you can
talk with the DC.

If you want more details (like resistor value), I can look.

3867. I need a little advice !

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-31 00:00:00 UTC
From: buddy10@aol.com
Message-ID: <425nmj$rs0@newsbf02.news.aol.com>
Source record: 239472

Well, I passed my General class upgrade tests on sunday !!! I can FINALLY
get on the prime
Worldwide bands ! I am now finalizing the plans for my layout. Here is a
rough idea of what my
lot looks like :

----------80'----------

- -
- [15' Tree]
- -
-
- -
-
- -
- OPEN
- House -
- < YARD > -
-
- N
38' -
45' W + E
- Height = 12' -
- S
- -
-
- -
- ________25'_____________ -
-
- -
- -
- - [20' Tree]
- -
- -
-__________45'_____________
- -
-
- Garage 20'
-
- -
-
- Height = 12' - <
Driveway > -

- -
-

-

It is,basically, an 80' x 45' lot. Power lines run along the
fence(North to South) at the back of
the property, they are up at about 25'.
Here is what I propose to do for Antennas :

Running North to South I will have a Multi-band Windom antenna(about 65'
long) up about 30'.
About 10' of the ends of the Windom will be drooping down(They will still
be about 20' above the
ground). The Windom will Start at the SouthWest corner of the Garage & go
to the North West
corner of my lot. This Antenna will give me general West to East
coverage.

Running West to East I will have a 20Meter Band Half-Square,up about 30'.
The bottom of each
"leg" will be about 10' above the top of the garage. The Half-Square will
start at the SouthEast
corner of the garage & go to the Middle of the house. I chose the
Half-Square for It's DX abilities.
I want to contact Antarctica by HF(Bad propagation,I know. But I can try
!). Not being able to use
a Big Beam on a tower , I figure this is my best shot(better than a low
dipole at least). I will also
use this for general coverage on 10meters - 40meters, using an Automatic
Antenna tuner(not
optimal,I know,but it should work for now).

My

Barry,

let me tell you that I find your statements and judgements rather offensive and inadequate. When you talk about Germany as a dictatorship, as having had the most unpleasant experiences, then be a little more specific about what you have experienced and how dictatorship in a Western democracy defines.

I suspect, however, that your command of the German language is as restricted as your English grammar, spelling and punctuation. When you regard not learning the language of the country you live in properly as "non-conformism", you are very likely to be ignored in every Non-English speaking country of the world as well. Comparing Germany to pre-89 USSR is a joke in any case.

With regard to ham radio I equally suspect that your problems in Germany have their origin in your language capabilities as well. Your ex-call shows that you had the lowest license class with VHF+ access only. This normally (excluding dxing and satellite operation) confronts you with the problem that the majority of people you can contact are Germans.

Don't flame me. Prove me wrong and I will most humbly apologize for my speculations.

What the airline offers is not 'cell phone' service. It's a totally
different service, using different radio frequencies, thru base stations
geographicly positioned to service aircraft in flight.

Different ball game altogether.

Thank you to those that stop and read this. I have a few questions and would appreciate any input you may have. I am new to the hobby but I've been interested for a long time. I have a B.S. in E.E. so I can handle most terminology you throw my way.

Right now I'm just listening in. I don't anticipate even studying for my no-code tech for another six months or so, but I'm trying to pick up the tech. stuff and maybe build a couple of kits......

Now, for the questions:

1. I purchased a RS 2036 scanner and I'm quite pleased thus far. It has a range from 29 MHz to 956 MHz minus the cell and commercial broadcast bands. My next purchase will be a HF / SW receiver, any suggestions? How far down should it go? Bear in mind, it should be somewhat inexpensive...

2. I'm listening from an apartment. I plan on moving the whip ant. near to or outside the window. Any other suggestions for increasing reception (lowering interference)?

3. I believe the RS2036 is also the BC890XLT. Any truth to that?

4. I'm looking for mods (NOT ONLY CELL) for this scanner. Are there any available? I will be seeking out the schematics / service manual for my scanner, will Radio Shack give me a hard time?

5. I'd like to use my computer too. I found FFTMorse and FFTScan. Both work with the SoundBlaster. Is there any other software available (other than logging software) for decoding digital, etc.?

6. I'd like to identify some of the digital/tones I'm hearing on certain bands. Are there any FAQs or books available?

7. My scanner has 29-30 MHz and 50-54(?) MHz coverage but I don't hear much amateur activity there, is my receiver too weak or aren't these that popular (in the Seattle area)?

8. What direction should I go to play with Satelite (Rx), weather FAX's, etc.? I appreciate your input here especially.

Thanks to anyone who responds.

Chris

The filter works as well through the cigerette lighter as elsewhere in eliminating buzz and humm. You could just use a choke a large electrolectic and a small ceramic capacitor and get something similar to the radio shack filter, but why bother. 73s

A small amorphous solar panel that is built on stainless steel and is in a tough Tefzel flexible frame such as a UniSolar would be a simple solution. A small panel about 3" x 12" should be reasonable. You could add a tiny digital VOM, such as the those sold by Radio Shack to keep and eye on the voltage. Then just run a 12 volt pack wired to the VOM and panel.

Dear Fellow Hams,

Due to the time demands of my part-time business, Radio Devices,
I have decided to sell the business to spend more time with the
family. Many of you (actually over 300) have purchased QRZ from
Radio Devices at least once, many several times. Just shows that
although 2 or 3 people consistently complain about commercial
stuff on the net, a vast majority appreciate the opportunity to
get good things cheap. I havent sounded off in the past, but now
I felt it necessary.

Soon a new ham and good friend will appear (probably not for a few
weeks) and may decide to offer QRZ! and other stuff on rec.radio.swap
occasionally as I did.

I have had the support of many fine individuals on the ham scene
helping me establish Radio Devices. I would personally like to thank

Fred Lloyd AA7BQ QRZ Author and fine gentlman
Dick Witzke KE8KL Oak Hills Research radio designer and Mr. QRP
Jim Stevens KK7C Antennas West Chief Antenna Engineer and innovative
antenna designer.

If you havent checked out the CDs, Kits, or antennas these guys
produce, I urge you to do so. Not the main line ICOM, KENWOOD,
etc big names, just fine Americans producing very high quality
ham products that I have enjoyed selling and using. I have used
these products (built all of Oak Hills Kits except the 4-bander
and will probably do so soon) and use my Antennas West Windom
on 40 & 80 all the time.

If you are in hurry to find out about the new Radio Devices,
call Rhyne Killian (KC1AX) at (508) 692-1653.

One last time before I erase my .sig......

A 1/2 wave antenna should work reasonably well without the
ground plane of the metal body. Numerous 2m mobile antennas
are 1/2 wave designs.

I'm considering a particular model to mount on my house
roof. The goal is to be as invisible as possible. The model
I am considering happens to be a 144 and 220Mhz unit. The
best feature is the element is a simple shaft and does not
have a loading.

I sometimes have a strong RF feedback sound through my
headphones when using my IC-735. I find when using my longwire
antenna (with an artificial ground) the problem is worse than
when I use antennas fed with coax.

Is your problem worse on some bands than others? I find the
higher bands to be worse.

3891. CLARA DXCC Certificate

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-01 00:00:00 UTC
From: wj114@freenet.Victoria.BC.CA
Message-ID: <1995Sep1.030611.16647@freenet.victoria.bc.ca>
Source record: 239345

The Canadian Ladies Amateur Radio Association
CLARA Certificate Program
(Revised August 01, 1995)

All QSL cards dated January 1, 1967 or later may be counted. All bands
and modes qualify, except for 2 meters and VHF Packet. Open to all Amateurs.
Send a complete copy of your log verified by two licensed Amateurs.
All QSL cards MUST be in the possession of the applicant but need not
be submitted. The Custodian reserves the right to request proof of
any contact. The basic certificates are obtained for working and
confirming contacts as listed for each different category.
Endorsements are available for each certificate in increments of 10.
The DXCC-YL plaque is black and gold, approximately 8X10 on a
walnut finished back.

Number 1 - CLARA Certificate.
Canadian and US stations work 10 members in 5 Canadian call areas
(limit 4 VE3/VA3). DX stations work 5 members in 3 Canadian call areas
(limit 2 VE3/VA3).

Number 2 - DXCC-YL Certificate or Engraved Plaque.
Work 100 YLs in 100 different countries. Use approved DX country list.

Number 3 - CLARA Family Certificate.
Work a member plus any licenced family members scoring 1 point for each contact
made. Family members need not reside in Canada nor same address.
A total of 10 points required for certificate. Log to show family relationships.

Number 4 - CLARA 10 DX-YL Certificate.
Work 10 YLs in 10 different DX countries. Use approved DX country list.
When 100 DX YL contacts have been confirmed for the 10 DX certificate, you
may apply for either the special paper certificate or the Engraved plaque
as in number 2 above.

Fee for all basic certificates: VE's $5.00 US and DX stations $5.00 US Dollars.
Endorsements VE's $3.00 each. US and DX stations $3.00 US Dollars.
Engraved plaque: VE's $45.00 US and DX stations $45.00 US Dollars.
Payment to be made to the Custodian. Please enclose SASE if writing for information.
CLARA National Net: Tuesday 1700Z on 14.120 MHz.
Canada East: Tues. 1400Z on 7.055 MHz. Wed. 0030Z on 3.440 MHz.
Canada West: Tues. 0300Z on 3.740 MHz. Fri. 0300Z on 3.740 MHz.

Usually what happens here is one of those grey coaxial cables is left unplugged. Also sit dowm, and make sure you have chosen the correct connections for the EX-205. May be have a friend look over your work for you. You might also send a note to ICOM at 75540.525@compuserve.com to see if there is more they can suggest

>them through a test, but again is rather useless on the air, and thus
>once again renders the value of the testing moot.

I suffer from this and it has made learning the code extremly hard, closer to impossible. I can not distinguish a dot from a dash, they all sound the same. I have tried different tapes, with different settings of base and treble, with no luck. I have tried learning by computer programs with no luck. Everytime I explain it to someone they come back with the response that I can learn the code by seeing flashes of light. What value is that over the air? That is when CW becomes an initiation right, not something of use. I have never tried to have my doctor sign the waiver saying that I can not pass a CW test because of the attitude of many of the hams I have met (i.e., *you could go it, you were just lazy*, or *your not a true HF operator*, etc)

I am happy with VHF/UHF voice. I may try 6m soon. I would love to have HF priviliges, but CW is a true barrier to me.

Rex,

ICOM also has an adaptor which gives you sidetone too.
It is made for the IC-A3, A20 and A21 aviation radios, but will work
on Icom HT thst can source 5 volts like the 02AT does. It is called
the HS-20-SB and costs about $90.00 It was built around the David Clarke
headsets.

Actually, if the ham doesn't smoke, the entire ASHTRAY/storage
assembly can be removed rather neatly, and two radios the
approximate size of a Kenwood TS-50 attached to the two posts
running down in the back. The only problem is that the Radios
might walk away. Remote heads are of course preferable, and
they could be stuck with VELCRO either on the DASH or over the
ASHTRAY/Storage compartment assembly in the Honda Civic.
Routing wiring however is not much fun in the Civic either
way. It's easier to reach the trunk, than to run power cables
through the grommets with the other wiring. 73 de n8blk/1

3908. [?] Radio Shack hand-held frequency counter

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-01 00:00:00 UTC
From: David Chapman <dave@chassis.demon.co.uk>
Message-ID: <809955210snz@chassis.demon.co.uk>
Source record: 239362

I see from a 1994 Radio Shack catalogue that they were offering a Digital Hand-held 1 - 1300MHz Frequency Counter for $99.99 (Cat.No. 22-305).

I will be visiting the U.S. shortly and wonder whether anyone can tell me whether this unit is good value for money - or not. I'm not expecting such a small device to be very accurate, but it could be useful to me when I need to determine the approximate frequency of small transmitters that I encounter from time to time. I'd be interested to know at what range it might be able to pick up and read the frequency of, say, a 100 milliwatt 160MHz hand-held Tx.

Any comments, alternative suggestions (at similar cost) will be much appreciated.

TIA - Dave G3NGK

From: derry@NeXTwork.Rose-Hulman.Edu
Message-ID: <427f8m$lvr@yakko.cs.rose-hulman.edu>
Source record: 239363

Howdy, All:

I don't know what is meant by "exact", but...

I've responded about this before and I'll do it again.

The Rand-McNally Road Atlas book has a map of every state. The Lat and Long are shown along the edge of these maps.

I have an old one that I won't throw away 'cuz I've drawn in the grid squares for the states.

If you're into grids, this works well but it takes a lot of work.

>I can not distinguish a dot from a dash, they all sound the same.

Hi Warren, IMO this characteristic is more wide-spread than a lot of pro-test-coders believe. My dad has this problem. Tones have to be in seconds so he can count to distinguish their length. Some hams on rrap suggested that he find a different hobby. Glad you didn't.

In my dad's case, his tone problem seems to be associated with a complete void in musical ability. No matter what note I hit on the piano, he always hummed one and only one pitch. He has an IQ in the "bright" zone but even at 5wpm, A, I, M, and N all sound alike to him.

Greetings from ARRL headquarters!

The services that the American Radio Relay League provides via the
internet include a World Wide Web page, an FTP file archive site,
an automated email information server (Info-Server), a number of email
mailing lists and direct email to most HQ staff. If you have any
questions about the following information, please send them to me at
mtracy@arrl.org.

Best regards - Michael Tracy, KC1SX, ARRL Technical Information Services.

* World Wide Web (URL http://www.acs.oakland.edu/barc/arrl.html)

The ARRL's Web home page is provided for by the generous folks
at Oakland University in Michigan. This page, maintained by
Scott Ehrlich, WY1Z, of the Boston Amateur Radio Club, features
the following information links:

Access to our FTP archive files
The ARRL and our membership services
Lists of upcoming license exam tests
The complete text of FCC rules Part 97
Contacts for volunteers who assist with emergencies and disasters
ARRL sponsored hamfests and conventions listing
ARRL sponsored contests
The latest ARRL Letter
Links to the web pages of ARRL affiliated clubs
W1AW bulletins
...and more!

* FTP archive site (oak.oakland.edu)

This FTP site (also at the University of Oakland) currently contains
a complete mirror of the files on our Email Information Server. It
also features a growing number of files from the ARRL telephone BBS.

To access this site, FTP to oak.oakland.edu. At the "login:" prompt,
type ANONYMOUS and at the password prompt, type your email address.
Change directory to pub/hamradio/arrl/infoserver and get the file
index.txt for a listing of what files are available (and in what
directories!)

* Email Information Server (info@arrl.org)

The Email Information Server (Info-Server, for short) is an automated
mail server that gives you access to many text files relating

to various facets of Amateur Radio. To obtain more detailed instructions
and a list of available files, send an email message to info@arrl.org
with any subject (it is not used) and the following text in the body
of your message:

HELP
INDEX
QUIT

Each file you request is then mailed to you automatically.

* Email Mailing Lists (listserv@netcom.com)

The following email lists are distributed by Netcom internet services
and are sponsored by Mike Ardai, N1IST, and the Boston Amateur Radio
Club. If you have any questions about these lists, please direct them
to Mike Ardai, N1IST at n1ist@netcom.com. For more information on the
Boston ARC, subscribe to barc-list.

arrl-exam-list: Amateur radio license examinations scheduled in the US
and in some foreign areas.
arrl-nediv-list: Bi-monthly bulletins from the ARRL NE Division director
arrl-special-olympics: Information about amateur radio's involvement in
the
Special Olympics
arrl-ve-list: Announcements to VEs and VE teams.
barc-list: Information, discussion and announcements for the Boston
Amateur Radio Club and hams in Eastern Massachusetts.
barc-races: RACES in Massachusetts and emergency management
ema-arrl: ARRL Eastern Massachusetts section discussions
fieldorg-l: ARRL field organization discussions
fox-list: Fox hunting and Radio Direction Finding
ham-tech: Technical discussions and questions about Amateur Radio
ky1n-list: VE exams in New England
letter-list: Redistribution of the ARRL Letter
newsline-list: Redistribution of Amateur Radio Newsline
w1aw-list: ARRL bulletins, news, and information

These lists are automatically maintained by the Majordomo software. To
sign up or inquire about these lists, send mail to listserv@netcom.com
with the following in the body (subject is ignored) of the message.
<listname> is the name of the list to subscribe to.

To subscribe: subscribe <listname>
To unsubscribe: unsubscribe <listname>
For more information about a list: info <listname>
For more information about Majordomo: help
To post (to the two-way lists), send your message to <listname>@netcom.com

* Headquarters Email for the American Radio Relay League

The complete list of HQ email addresses can be obtained on the
Internet via:

World Wide Web (http://www.acs.oakland.edu/barc/arrl.html) -
Click on the "Contact information" link.

FTP (oak.oakland.edu) - At the "login:" prompt, type ANONYMOUS and
at the password prompt, type your email address. Change directory
to pub/hamradio/arrl/infoserver and get the file hq-email.txt.

Email (info@arrl.org) - Send an email to info@arrl.org with any
subject (it is not used). Put SEND HQ-EMAIL.TXT on a line by itself
in your message. For a set of instructions on using the email server,
add the word HELP on another line by itself.

Best Regards, Michael Tracy, KC1SX, ARRL Technical Information Services

3913. GB2RS News 3rd September 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-01 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <810010163snx@llondel.demon.co.uk>
Source record: 239367
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 3rd of September and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

We start this week with a final reminder that the RSGB's International HF Convention takes place at Old Windsor in Berkshire next weekend, the 9th and 10th of September. The programme of events is as follows:

At 10.15 am on Saturday the 9th is a report on the RSGB's Islands on the Air Awards programme, and a presentation on 'Amateur Radio on Internet'. At 11.30: Activating Islands, the "do's" and "don'ts", and Computers in the Shack. At 2.00 pm on Saturday is a presentation on the Conway Reef DXpedition, and talks on 'Low Band Antennas' and 'HF Data Modes', followed at 3.30 pm by talks on Contesting in the Caribbean, Sunspots and Propagation, and the DXCC Program.

On Sunday the 10th, the Convention starts at 9.45 with talks on RSGB HF Contests, the RSGB Islands on the Air awards, and Equipment Reviews. At 11 o'clock there will be a talk on amateur radio in Bhutan, the presentation of HF Awards and Trophies, and a Novice Forum. At 12.15 the Young Amateur of the Year presentation will take place, and there will be talks on Topband Antennas and the Kermadec Islands DXpedition. Finally, at 2.15pm on the Sunday, there will be a Packet Cluster Forum and presentations on the DXCC Program and CW Techniques.

Further details can be found on pages 21 and 40 of the September RadCom. Some overnight accommodation is still available at the Conference Centre, and bookings may be made by contacting Fay Huxley at RSGB HQ on 01707 659015. Day visitors are also very welcome.

The 23 centimetre repeater at Stoke-on-Trent, GB3SE, which operates on channel RM3, became operational from a new site on the 27th of August. When not in repeater mode, the transmitter carrier remains on and identification takes place every 35 seconds. Reports are welcome and should be sent to the repeater keeper, Geoff Booth, G8DZJ, whose address is correct in the latest RSGB Call Book.

and 2 1 Echo Juliet series.
Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From Spain, ED0DL will be on the air on Tuesday the 5th of September during the visit of the Spanish Royal Family to Lugo.

From Corsica - TK - DF4UW will be active from the 4th to the 15th of September. Check 7060, 14260, 18160, 21260 and 28620 kHz.

And from Jibuti, F5SFD will be active as J28PP from this month for a period of two years.

Now news of some special event stations:

M1OOG, that is "Mike One Oscar Oscar Golf", is on the air now until the 21st of September. The callsign symbolises the 100th anniversary of Guglielmo Marconi's invention of radio, and is only the second time that the Radiocommunications Agency has authorised the use of an "M" callsign for amateur stations.

GB2RAF is on the air this weekend, the 2nd and 3rd of September, from the Shoreham Air Show. The station is being operated by members of the East and West Sussex groups of the Royal Air Force Amateur Radio Society.

The South Derbyshire and Ashby West clubs are operating GB100NT from Calke Abbey this weekend, the 2nd and 3rd of September, in order to celebrate the 100th anniversary of the National Trust. Next weekend, the 9th and 10th, the Poldhu Amateur Radio Club will operate GB100NT from Mullion Cove in Cornwall.

And also celebrating the National Trust centenary, the Yeovil Amateur Radio Club will operate GB0NTM from Montacute House in Somerset next weekend, the 9th and 10th.

On Wednesday the 6th of September GB1ASS will be on the air from the Number One Air Signals School at RAF Swanton Morley in Norfolk, which is being closed down. Special authorisation has been given to operate a GB1 callsign on HF. All enquiries should go to Terry Owen, G4PSH, on 01692 582064.

The Hoddesdon Radio Club will be operating GB2HCD from the Playing Field in High Street, Broxbourne, from 10.00 am on Saturday the 9th of September. Visitors are most welcome.

Next weekend, the 9th and 10th of September, the Medway Amateur Receiving and Transmitting Society will operate GX5MW on HF, and G8MWA on VHF, from the Strood Steam Rally. All visitors are welcome.

GB2OWM will be on the air from the Orkney Wireless Museum on the 9th and 10th of September, during the fifth Orkney Science Festival. The museum is located on the island of South Ronaldsay. Operation will be on the HF bands and further details may be obtained from Bill Wright, GM3IBU, whose address is correct in the current RSGB Call Book.

Also on the 9th and 10th, the Scarborough Special Events Group, in association with English Heritage, will be operating GB0EHS from Scarborough Castle. Look around 3568kHz on CW or 3725 kHz on SSB, plus 2 metres and 70 centimetres. For further information contact Roy Clayton, G4SSH, on 01723 862924.

GB0RAF will be operated by members of the Royal Air Force Amateur Radio Society on 40 and 80 metres at the Lincoln Hamfest on Sunday the 10th of September.

Callsigns GX2AA, GX3LRS and GX6XRS will be on the air from the Leicester Radio Society's Open Day at their club house on Sunday the 10th of September. All visitors are welcome.

And GB0SRA will be active on the 10th of September from the Southend and District Radio Society's rally at Westcliff-on-Sea in Essex.

Next the Rally News:

The Telford Rally takes place at the Telford Exhibition and Racquet Centre today, Sunday the 3rd of September. The event features traders, an RSGB bookstall and membership information stand, special interest groups and a bring and buy stall.

The Vange Amateur Radio Society rally is taking place today, the 3rd, at the Laindon Community Centre, Basildon, in Essex. Morse tests will be available on demand at the rally. The doors open at 10.30 am and talk-in is by GB4VMR on 2 metres channel S22.

The Bristol Radio Rally is also taking place today, Sunday the 3rd of September. The event features more than 100 tables and a large bring and buy stand. Talk-in is on 2 metres channel S22.

On Saturday, the 9th of September, the Ballymena Amateur Radio Club are holding their rally at Ballee High School. There will be an RSGB bookstall and the usual traders. Doors open at 12 noon, and further details may be obtained from Jeff Clarke, GI4HCN, on 01266 659769.

Next Sunday, the 10th of September, the Lincoln Hamfest will take place at the Exhibition Centre, Lincolnshire Showground. In addition to the usual attractions, which include Morse tests on demand, G4NVD is offering a free independent "Functional Confidence Check" on any amateur radio equipment bought at the rally. The doors open at 10.30 am and for further details contact Sue, G8VGF, on 01522 525760.

It's the 75th anniversary year for the Southend and District Radio Society, and this year it will be holding its radio and computer rally at the Cliffs Pavilion, Westcliff-on-Sea, in Essex, on Sunday the 10th of September. The event features traders and an RSGB membership information stand and book stall. The doors open at 10.00 am and further information may be obtained from Ron, G0UAW, on 01702 353676.

The British Amateur Radio Teledata Group - BARTG - are holding a rally at the Sandown Exhibition Centre, Sandown Park Racecourse, at Esher in Surrey on Sunday the 10th of September. The event features many exhibitors and special interest groups; doors open at 10.30 am, and further information may be obtained from Peter Nicol, G8VXY, on 0121 680 5963.

Now for the HF contest news:

And SSB Field Day is taking place this weekend, the 2nd and 3rd of September. This is a 24-hour portable contest which finishes at 1500UTC this afternoon. The full rules are in the June RadCom.

We know of two other HF contests this weekend: the AGCW 'straight key' event and the Bulgarian LZ DX CW contest. Brief rules for both of these contests are on page 22 of the August RadCom.

Tomorrow, Monday the 4th of September, the first session of a Slow Speed CW Cumulative Contest takes place from 1900 to 2030 UTC. The rules are in the August RadCom.

Next weekend, the 9th and 10th, the Worked All Europe SSB Contest takes place with European stations working non-Europeans. A station signing GB5HQ will be competing in this contest from the RSGB HF Convention.

Next some VHF contest news:

A series of 144 MHz contests is taking place this weekend, the 2nd and 3rd of September. These are the RSGB 144 MHz Trophy, the IARU 144 MHz contest, and the RSGB 144 MHz Listener's contest, all of which run for 24 hours from 1400 UTC on Saturday. The rules are in the June RadCom. However, entrants should note that there is a change of address for entries. They should be sent to Steve Thompson, GW8GSQ, at P O Box 29, Bridgend, CF35 5YA.

And the fourth 144 MHz Backpacker contest is taking place today, the 3rd of September, from 1100 to 1500 UTC. The rules are on page 83 of the April RadCom.

The WAB 144MHz QRO Phone contest takes place next Sunday, the 10th of September, between 0900 and 1700 UTC. The rules may be obtained from Kate Wragg, G0FEZ, whose address is in the current RSGB Call Book.

And now the solar factual data:

First this week we start with an "unconfirmed" report that a sunspot group has been observed that belongs to the new sunspot cycle, cycle 23. The group became visible on the 12th of August and lasted for only two days. We are awaiting confirmation of this report from the "Space Environmental Services Center" at Boulder, Colorado. However, even if confirmed, this does not mean that we are now at solar minimum, and that from now on things will get better. The latest forecast from Boulder is for the sunspot minimum to take place during the summer of 1996.

The period from the 21st to the 27th of August saw a small but welcome increase in sunspot numbers, and the geomagnetic field was at quiet to unsettled levels. Sunspot numbers increased from zero on the 21st to peak at 63 on the 26th, with a mean of 32. Solar flux levels also increased from 71 units on the 21st to 80 units by the 27th, with an average of 75 units. The electron fluence declined slightly but remained at a moderate level. The X-Ray flux increased each day from A1.0 units on the 21st, to A7.7 units by the 27th, giving an average of A3.8 units. The 90-day solar flux average on the 27th was 74 units, the same as last week.

Geomagnetic conditions started the period at quiet levels but did increase to unsettled on the 23rd and the 25th, after which they

returned to quiet levels again, with an Ap index of 6 on the 27th. The average for the period was 10 units. The aa indices, as supplied by the British Geological Survey for the period from the 15th to the 21st of August, was mostly quiet, except for the 17th, when levels were unsettled with 25.4 nanoTeslas recorded. The quietest day, with only 7.2 nanoTeslas was the 21st. The average for the period was 16.5 nanoTeslas, about K2.

I'll repeat the figures: spots - 32, flux - 75, Ap index - 10, X-Ray flux - A3.8.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from 18th to the 24th of August, increased from 5.7MHz to 7.8MHz by the 22nd. Levels then declined to 6.4MHz on the 24th. The average for the period was 6.3MHz. Darkness hour lows remained steady, and the average was 2.8MHz. Daytime highs took place between 1800 and 2000 hours every day, with the darkness hour lows between 0100 and 0400 hours.

I'll repeat the figures: highs - 6.3MHz, lows - 2.8MHz.

And lastly the solar forecast.

This week solar activity is still expected to be very low with solar flux figures declining to the low 70s. Geomagnetic activity is expected to be unsettled at the start of the week and again next weekend. The middle of the week should see the levels at their quietest. Ionospheric MUFs for the south during daylight hours could reach 20MHz on the better days. As we approach the equinox later this month we can expect a slight improvement in the daily highs. They will also occur earlier in the day. The darkness hour lows are expected to be about 11MHz. Very little, if any, sporadic E can now be expected.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Kilo and G7 Victor Romeo series, and Novice calls in the 2 0 Alfa Mike

>
>THANKS

I am posting this becuz mail to you bounced:

Finding any transmitter is a matter of radio location technique. Using a
receiver, sweep the area and the frequency range, use an expanding circle
path from the point of suspected bugging. Once you locate the bug, you can
either smash or confiscate it. Jamming involves using a higher power transmitterto
over-load the bug's frequency and capturing the frontend of the listening
receiver. I recommend using a sweep-frequency oscillator to modulate your
jamming transmitter, this is very effective in covering any modulation from
the bug!

/>
/> Why are 800 MHz cellular phones forbidden on air carriers when
/> the same airline offers cell phone service to its passengers using
/> a credit card? Any logic here?

It is illegal to use cell phones in the air period. They were designed
for ground use only. Using one in the air would cause problems with
many cells. A hospital here tried to get approval to use one on a
medical helicopter to connect to a computer but were turned down. They
ended up using some CAP freqs they borrowed in the 133MHZ area.

The phones on airlines are not the same thing as ground cell phones. I
believe they go to a satellite and then to the ground.

3916. Re: THE NEW DX REFLECTOR

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-01 00:00:00 UTC
From: slay@netcom.com
Message-ID: <slayDE8nE5.9Ay@netcom.com>
Source record: 239370

Frank R. Smith (ah0w@primenet.com) wrote:
: Amir 4X6TT has started up a new DX Reflector. This one is unmoderated and
: welcomes Real DXers to join in the lively discussions on DXing. It encourages
: freedom of expression, fresh ideas, exchange of innovative and creative
: thinking - no censorship, no "List Fuhrer" this time.

$5 says that this new "people's reflector" (named since there's apparently
no facist "List Fuhrer" dries up and blows away within a few months for
a few very simple reasons:

1) What real DX and DX-pedition related info will appear on the
the "New DX Reflector" that will NOT appear on the existing one?
What's the "competitive advantage" to use a marketing term?

2) Market-share. The existing DX reflector ... run by that
seemingly facist "List Fuhrer" has over 1000 subscribers
world-wide as opposed to the >100 who signed up to this
"new reflector" within only it's first days. A nice start,
to be sure ... and perhaps a place for those who want to
continue discussions on whether or not DX Nets are a good
or bad thing and other such "stimulating" (snork) topics. ;-)

On the other hand .... if such topics ARE moved to the new
reflector.... then those on the "original" DX reflector won't
have to wade thru the sometimes massive numbers of messages
containing such drivel.

3) I assume that with the exception of a few folks (how many is it
anyway? 5? 10? 30? 100?) who have been either temporarily or
permanently removed from the "original" DX reflector, most
subscribers will likely receive posting from BOTH reflectors.
If that's the case .... how long will it take before subscribers
start seeing lots and lots of duplicate postings for things
like the ARRL and OPDX bulletins (which already show up here
on this USENET newsgroup as well)? That'll be about the time
that folks starting looking for the FAQ to figure out how to
unsubscribe.

So the real "advantage" that the new DX reflector will have over
the pre-existing one is to enable those who have an axe to grind
and/or want to talk about the evils of this or that subject will
have a place to congregate.

Hmmmmmmmm..... on second thought .... I wish the very sincerest
best wishes to the founders and subscribers to the "new" DX
reflector and hope they achieve an overwhelming success! :-)

Frankly, I wouldn't have bothered posting anything here except for the "List Fuhrer" comment ..... Activities founded in a negative prostest to something else rarely succeed as often as those who have a truly positive and innovative idea. Nicht wahr? (oops .... does that make me a lemming for the "List Fuhrer"?). :-)

Cheers
Sandy

SB PROP @ ARL $ARLP037
ARLP037 Propagation de KT7H

ZCZC AP06
QST de W1AW
Propagation Forecast Bulletin 37 ARLP037
From Tad Cook, KT7H
Seattle, WA September 1, 1995
To all radio amateurs

SB PROP ARL ARLP037
ARLP037 Propagation de KT7H

Solar activity was up a bit over the past week, with average Sunspot Numbers increased by about 29 points and Solar Flux up by about 7. Solar flux peaked just above 80 last week, and is now headed slowly down. Flux values should start increasing again after mid-September, reaching current levels by the end of the month.

Near the end of solar cycle 22 we are seeing very little geomagnetic activity, so conditions are stable, but HF propagation is poor. The A index, a 24 hour indicator of geomagnetic stability, was only in the double digits twice during the past week. Many days have had 3 hour K indices of zero, which is as low as it can get. The K index is a short term indicator of geomagnetic conditions.

Look for slightly active geomagnetic conditions around September 5 and 6 and again to a somewhat lesser degree around September 10 and 11. These events will be caused by recurring coronal holes, rotating back into position on the Sun.

In September we have the Fall equinox on September 23. Look for better seasonal HF conditions, although there won't be any help from solar activity.

Sunspot Numbers for August 24 through 30 were 40, 59, 63, 49, 33, 21 and 19, with a mean of 40.6. 10.7 cm flux was 77.1, 77.1, 77.3, 79.9, 81.6, 78.1 and 77.4, with a mean of 78.4.

The path projection for this week is to Turks Caicos Islands (VP5) from Tucson, Arizona, Omaha, Nebraska and Cleveland, Ohio.

From Tucson 80 meters looks good from 0100z to 1100z and 40 meters from 2300z to 1300z. 30 meters could be open around the clock on some days, but the worst time is from 0730z to 1100z and the best is from 2330z to 0500z. 20 meters should be good from 1430z to 0200z.

17 meters should be open most days from 1700z to 0000z. On some days 15 meters may open from 1900z to 2200z.

From Omaha check 80 meters from 0000z to 1100z, 40 meters from 2200z to 0600z and 40 meters again from 1100z to 1300z. 30 meters should be open from 1230z to 0400z. 20 meters should be open most days from 1600z to 0000z.

From Cleveland 80 meters should be open from 2300z to 1100z. 40 meters may be open around the clock, with the best period from 0000z to 1030z and the poorest period from 1500z to 1900z. Check 30 meters from 1030z to 1200z and again from 1400z to 0500z. 20 meters should be open from 1200z to 1430z and also from 1930z to 0200z. 17 meters should be open most days from 1430z to 0000z, with the best time from 1700z to 1800z. On some days 15 meters may open from 1700z to 2230z.

Bob,
For a beam heading program you do not need to know the EXACT lat-lon.
Look in your phone books yellow pages, front part that describes city
government and local attractions, lat 'n lon will be there.
But if you really want it nailed down, point to one of the numerous
web sites that has call sign lookup.

Butch KF5DE

[[EXAMS.TXT : 2342 in EXAMS.TXT]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 7 to 10 days since you took you examination?

If so, Call ARRL at 1-800-326-3942 (8 am to 4 pm weekdays, eastern time)
to find out -- or call the FCC at 1-800-322-1117 during business hours.

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

If your license has not been granted within three weeks, and your test
was coordinated through the ARRL/VEC, call the ARRL/VEC at 203-594-0300.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-594-0200 x282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-594-0200 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via internet at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

AFTER THE EXAM - HOW LONG WILL IT BE BEFORE MY LICENSE ARRIVES?

If you've recently passed your initial examination for an Amateur Radio license, or if you've just upgraded, please accept our warmest congratulations! Now that you've passed the test, receiving your license in the mail is the next step.
If your exam was coordinated through the ARRL/VEC, license turnaround time will be approximately 7-15 days. This includes 1-5 days for the VE team to complete their processing (the team has up to 10 days before they must mail the results), 3-5 days between the VE team and the VEC; 2 business days at the VEC (in some cases only 1 day); and 1-3 business days at the FCC. Allow 5 business days from the date that the VE team estimates the test session results will reach the VEC.

If your license has not been granted within three weeks, and your test was coordinated through the ARRL/VEC, call the ARRL/VEC at 203-594-0200.

We supply ARRL VE teams with postage-paid mailers for returning your test results to us. The VE team can choose from USPS Priority Mail or several types of overnight mailing systems. Nevertheless, we typically receive most test packages within two to three days of the test date--and conduct our processing within two business days (or often less) of the day we receive them. The FCC license usually follows on the next or 2nd business day after we send your application data to them.

You can help keep the processing time as short as possible by ALWAYS bringing all ORIGINAL CSCEs (plus copies of them) and your ORIGINAL FCC license (and a copy), plus your identification documents (photo-ID emphasized), to every test session you attend.

THINGS TO BRING TO THE EXAMINATION

Be prepared to bring the following items with you to VEC examinations: Your original current FCC-issued Amateur Radio license (and a copy of it)--if you are licensed; Any original Written or Code Element credit documents (CSCEs) which are currently valid (and a copy of them); Two forms of identification (e.g., a photo-ID or drivers license and another item indicating your current name and address); A calculator (if necessary); A pen and two pencils; and, the applicable examination test fee.

NEED AN FCC FORM 610?

The ARRL/VEC can supply you with your needed Forms 610, whether they be for the Reciprocal Permit for Alien Amateur Licensee, Form 610-A; Club/Military-Recreation/RACES station, Form 610-B; or Form 610 for Amateur Operator/Primary Station License. FCC Form 610-R is a computer generated renewal form that will be sent from the FCC (beginning September 1995) to licensees whose license is to expire within 90 days. Form 610-V is the special application for persons seeking a Vanity call sign (as of August 11, 1995, that form is not available -- send the ARRL/VEC an SASE if you would like us to supply you with the form once it becomes available).

Several FCC forms, including Form 610, are available through the FCC's fax-on-demand service by calling 202-418-0177 (request form "000610").

TECHNICIAN CLASS GRANDFATHER CREDIT

If you hold a Technician class license which was issued prior to 3/21/87, you are not required to take the Element 3B (General class written) examination if you can provide a copy of your FCC-license dated before that date. If your licensed has since been renewed, and if you don't have a copy of the pre-3/21/87 license, you must seek a verification letter from the FCC.

To do so, write to FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245 and request a letter of "Verification of Technician License Held Prior to 3/21/87"--verifying that you were licensed as a Technician class licensee before that date (the date the Technician Question Pool was split off from the General class Question Pool -- March 21, 1987). After you receive that letter from the FCC, bring it to the test session with you in order to claim your deserved credit.

LOST LICENSES

If you have lost your license, be aware that VECs are not permitted to submit any upgrades to the FCC without a copy of your current license attached to the 610 form. In order to expedite your upgrade, you must write the FCC and request a replacement license. Since that can take several weeks to arrive, we recommend that you also request a Form 1010-B License Verification Letter from the FCC which will arrive in a couple of weeks--and is legally binding license document. You may use that form as a license until your Form-660 license arrives. The original and a copy of your License Verification Letter must be brought to the test session to verify that you are currently licensed--the copy of which will be attached to your upgrade application (in lieu of an actual Form-660 license copy). To request the Form 1010-B License Verification Letter, write to: FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245; indicating that you lost your license and that

you are requesting that a replacement license be issued to you--also be sure to request that they send you a License Verification Letter verifying that you are licensed.

ACCOMMODATIONS FOR THE HANDICAPPED OR DISABLED

The FCC requires that the administering VEs must accommodate an examinee whose physical disabilities require a special examination procedure. To do so, the administering VEs may require a physician's statement indicating the nature of the disability before determining which, if any, special accommodative procedures must be used.

The VEs may accommodate handicapped/disabled examinees by administering the examination at a place convenient and comfortable for the examinee--even at bedside; for the hearing impaired the Morse code may be sent using flashing lights or a vibrating surface; for the visually impaired, VEs may read or write for the examinee; where warranted, the VEs may pause the Morse code message after each sentence/phrase, or each word, or even after each character to allow the examinee additional time to absorb and interpret what was sent--also the VEs may substitute a sending test for a receiving test where the examinee's handicap warrants.

VE Teams may need advanced notice in order to provide the necessary accommodations to examinees who require them. If you will require accommodations, please contact the VE Team in advance to advise them of your needs.

EXEMPTION OF THE 13/20 WPM MORSE CODE REQUIREMENTS

If you are a severely handicapped or disabled individual and have already passed at least a 5 WPM Morse code examination (or hold a license which meets that requirement), you may be eligible for exemption from the 13/20 WPM Morse code examination requirements. For information and applicable forms, send a SASE to the ARRL/VEC, 225 Main St, Newington CT 06111, and request our Handicapped Information Package.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC which is coordinating this examination. This single-character designator denotes the VEC as defined below. An "A" (for example) indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not find any examinations listed for your area, you may contact

any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-594-0300
The 1995 test fee is $5.90.

3924. Yaesu's Internet address?

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-01 00:00:00 UTC
From: tlewis@dfw.net
Message-ID: <42820d$6bm@dfw.net>
Source record: 239378

In the past, I have received some very nice responses from Yaesu via E-Mail. For some reason, all my messages are now bouncing back from Yaesu. I was wondering if anyone knew if Yaesu has discontinued using E-Mail or if they simply changed their Internet address. I was using Yaesuusa.aol.com.

Any information would be appreciated.

73!

>would be listening for bona-fide continuous wave on VHF and up,
>though; then again, I'm new to ham radio, too, so don't take my word
>for it on that last point.

Well, I always make a few CW QSOs in every UHF and VHF contest, and with my peanut-whistle signal on 6 meters I find CW is the best way to get heard during the sporadic-E openings. So CW is certainly not unknown on the high bands! But I wouldn't recommend it as a way of getting "random" code practice -- it's not against the regs, but as Alex points out, it's just not likely there will be anybody listening. Pre-arranged practice, like getting a local group together and doing scheduled on-air practice would be fine, just don't expect to start beeping on the calling frequencies and raise somebody very often. And regularity is important when trying to build code skills. For random, unarranged, on-air code practice your best bet is to get to 5WPM via off-air methods (and copying W1AW), pass element 1(a), and then get on the Novice bands. You usually WILL be able to find somebody on 40 meters! Trying to do a live on-air QSO before you can copy 5WPM would be kind of frustrating, anyway.

3927. Sub-audible tone generator

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-01 00:00:00 UTC
From: butch@apollo.wes.army.mil
Message-ID: <427av7$64n@prop.wes.army.mil>
Source record: 239381
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.equipment

I have a Kenwood tr-7950 that does not have the optional tu-79 tone unit installed. Kenwood says that option is no longer available. does any one know of a way to build one? The local repeaters are all using 100Hz tones, so thats the only one I will need.
Any info about how to make one or how to modify another unit to work in the 7950 would be appreciated.

Thanks,

Butch KF5DE

3928. Re: Drop Code? Yes way!

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-01 00:00:00 UTC
From: awinterb@du.edu
Message-ID: <4272gk$hlr@mercury.cair.du.edu>
Source record: 239382

The CW test really is an initiation rite, in my opinion. After all, I've operated CW for years, and one problem I see that is not addressed by the CW test is poor sending ability. When I was a VE, we did not administer a sending test, only a receiving test. Yet when I get on the air, probably 10% of the stations I try to copy are almost un-copyable due to a bad fist. Better that people be tested (say, every 10 years?) to see if they can handle a key of some kind. Also, I'd be in favor of a change in rules that would allow HF phone privileges to those who have passed the technical exams, allowing them onto CW once they've passed at least a sending test to ensure they can emit a copyable signal.

: Just wondering.

Sure! Depending on what you mean by "can."

If you mean, "where is it legal to send CW," the simple answer is, anywhere you can transmit at all. [97.305a] Probably your best bet above 50 MHz for "real" contacts is the bottom of 2 meters, or maybe 6 if propagation is really good. Satellites are another good place. (146.94 is not a very good place for "real" carrier-on-and-off CW). It's also legal to send M(odulated) CW anywhere on 6 and above except for 50.000-50.100 and 144.000-144.100, where only CW is allowed. This means you can feed the audio of a keyer/oscillator into your FM rig on an FM simplex channel or (with the permission of the licensee/trustee) over a repeater (even .94). Some repeaters have evening MCW nets for practice, which are easy to start with permission and a bit of publicity, since it only takes 2 check-ins to go full speed ahead.

Technicians who have passed their 5 WPM have a number of HF options, of course. For those who haven't, the truth is that the exam tests receiving skills; practice sending if you want (certainly before getting on the air), but the bulk of your time is probably better spent learning the characters if you don't know them all yet. Fortunately, receiving practice is easy: instructors, tapes, W1AW, on-air QSOs and such are always available, and 5 WPM doesn't take too long to master. Two-way conversations are (frankly) a lot more fun, but they're easier when you know all the characters!

Sandy, this issue doesn't relate to "DX and DX-pedition related info"...
If you've been on the internet any length of time, you surely must realize
that there is a ton of DX information available...
What started this sorry affair is Lyndon's PUBLICY belittling AA2DU for
committing the heinous crime of quoting a large block of text from a prior
post, and then adding a one-liner commentary...

After Lyndon implored us poor idiots to read the guidelines relevant to his
reflector (and he of course had to use the "GD expletive") I took the time to
actually READ his FAQ... and found him to be a hypocrite. And I remarked as
much publicy. So he canned me (and a few others for their comments). I knew
he would react that way :)

Butch, It shouldn't be that hard to put in an aftermarket tone board.
The factory board will only let you set it up for three different
frequencies, if I remember correctly. If you only need one frequency,
I would look at one of the miniature tone boards that Communications
Specialists sell. They are available from a lot of the mail order
places. They are very simple to hook up. The original factory tone
board plugged into a small plug on the 7950. My guess it was a B+,
GND and tone into the radio line. Even if it is not, you can call
Communications Spealists and they will tell you where to connect their
boards on most radios. I hope this helps....73's Floyd WD5ENJ

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 01/2330Z SEPTEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 01 SEPTEMBER AND FORECAST FOR 02 SEPTEMBER - 04 SEPTEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 74/11

GOES satellite data for 31 Aug
Daily Proton Fluence >1 MeV: 1.6E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 6.3E+06 (normal)
X-ray background: A3.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
02 Sep 03 Sep 04 Sep
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 02 Sep: 74/11

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 31 Aug
Learmonth 5 2221 1121
Fredericksburg 3 2
Planetary 7 5

Observed Kp for 31 Aug: 1011 2232
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
02 Sep 6 Quiet
03 Sep 10 Quiet to unsettled
04 Sep 18 Quiet to active
COMMENT: Quiet to active levels are expected 4-6 Sep, due to a
recurrent coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
01 Sep normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST

3936. TEKTRONIX 491 SPECTRUM ANALYSER

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-01 00:00:00 UTC
From: P.Dalliessi@massey.ac.nz
Message-ID: <P.Dalliessi.119.304662D3@massey.ac.nz>
Source record: 239390
Cross-posted to: rec.radio.amateur.misc,sci.electronics

Desperately need help with a Tek. 491 spectrum analyser problem.
SA works fine on all bands. Problem is in the "LOG" mode, the on screen dynamic display is far from linear. e.g., a -35dbm signal set on log. ref. at top of screen, shows -25db after 20db of attenuation is switched in, whether by the internal IF attenuator switch, or using an external attenuator. This effect is even more pronounced as the signal is attenuated nearer the base line. The problem does seem to be connected with the log. video detector.

Is there a Tektronix engineer out there, or someone familiar with the 491 who could help?

I would appreciate a direct "EMAIL" reply, initially, and we could then continue on the netnews for the benefit of others who may have a similar problem.

Thanks in anticipation.

Peter Dalliessi, ZL4MS,
FIMS,
Massey University, Palmerston North,
New Zealand.

3937. Crystal Radio Information?

3938. **WW2END Special Event Station**

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-01 00:00:00 UTC
From: treit@seanet.com
Message-ID: <treit.310.00006E8F@seanet.com>
Source record: 239392

Starting today, Sept. 1st, at 1900 UTC, the battleship USS Missouri will have a voice. That voice will be WW2END, the Amateur Radio special event station that will be onboard the ship to commemorate the signing of the Japanese surrender 50 years ago, the event which brought an end to the long, terrible suffering of World War II.

We will be operating on every major amateur band, on both CW and SSB and also on packet, sattelite, 6 meters and VHF/UHF. Look for WW2END up about 25 KHz from the bottom edge of the General portion of each band. Every station that makes contact with WW2END will be eligible for a handsome certificate to commemorate this once in a lifetime event. QSL information will be announced on the air, and will also be posted here in the near future.

It's finally here, so come be a part of history! I'll look for you from onboard!

73's!

-Mike Treit KB7QOP

3939. This Week in Amateur Radio #127 (for air through 9/8/95)

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-01 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <xlEj8S3.sanderman@delphi.com>
Source record: 239393

Here is a summary of news items covered on edition #127 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 9-Sep:
-
1. World Radiosport Team Championship Re-scheduled for 1996
2. ARRL Officials Meet with UN Representatives
3. Amateur Killed, One Injured in Accident on Montserrat
4. German Cosmonaut to Fly Aboard MIR, Upgrades Expected
5. Indiana Balloon Launch Next Week for Educational Facility
6. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
7. "The RAIN Dial-up" from Chicago
8. Upcoming Special Event Stations with George Bowen, N2LQS/126
9. Hiram Percy Maxim 126th Birthday Party Begins Saturday
10. Weekly Propagation Forecast
11. "Amateur Radio Newsline" - Edition #942 from Los Angeles
-
Satellite time and uplink equipment have been provided by SKYVISION
as a service to the amateur radio community. Funding to access
"Newsline" was provided by a grant from the Stoddard family and
users of the KF9MP repeater system in North Webster, Indiana.
-
"This Week in Amateur Radio" is a weekly amateur radio news and
information service, in audio newsmagazine format, which is produced
by Community Video Associates, Inc., a New York State not-for-profit
corporation based in Albany, New York. The program is carried on
the "Tech Talk Network" each Saturday at 8:00 PM (EDT) on the
Telstar 302 commercial communications satellite, transponder 21
(11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees
west longitude in geosynchronous orbit, and can be heard on various
VHF/UHF repeaters throughout the United States and Canada, as well
as on 160 meters at 1860 kHz. Contact your local amateur radio club
or repeater operator if "This Week in Amateur Radio" is not being
heard in your area.
-
Production and transmission expenses are underwritten by
contributions from repeater system operators, amateur radio clubs,
and individuals. For further information, contact George Bowen,
N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at
518/664-6809. You may also reach them via amateur packet @
WA2UMX.FN32AW.ENY.NY.USA.NA or on the Internet to KXKVI@DELPHI.COM
or SANDERMAN@DELPHI.COM.

Not likely...

I am 50 and got my license while in high school; the debate was on then.

The only thing that has changed in the debate over the decades is the current lack of use of morse code outside the ham bands. For example, back when I first joined the Army, everyone was given a morse code ability test in Basic Training and it (morse) was used heavily by the military. This was used as a justification for continued morse testing of hams, i.e. to provide an emergency pool of operators. Since virtually no one but hams use morse anymore, that arguement has gone away.

Nothing else in the arguements has changed over the decades; I've heard it all many times before and 30+ years of the same debate with the same pros and cons is really boring.

Personally, I wish morse testing would be dropped just to end the damn debate.

3943. DJ580T mod question

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-02 00:00:00 UTC
From: travisp@ix.netcom.com
Message-ID: <428a5o$7rb@ixnews6.ix.netcom.com>
Source record: 239395
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.homebrew

I am atempting to do the extended receive mod. on my DJ580T. I know that you are supposed to cut the red wire, but I want to make sure which wire you cut. With the unit's display facing up and the bottom removed you can see a "red" loop wire that is about the same size as the blue one, and then there is a small "orange/red" wire at the top. I believe I cut the larger loop which is red and not the smaller loop that is orange/red. If anyone can clear this up for me I would greatly appreciate it. Thanks and 73.

Seems to me that if it is not in the financial interests of the "pager" or "pagee", it would be permissible. And, only he, she, or they know.

The R&R are not all that hard to understand ... and they are quite clear with regard to permissible communications. The real confusion occurs, I think, when the myriad of interpreters begin.

There's nothing specific in the rules and regs that prohibit you from calling a pager.

Leaving a voicemail message would certainly be clearly OK.

What your friends might be referring to would be Part 97.117 which provides that "All communications regardless of type of emission employed shall be in plain language except that generally recognized abbreviations established by regulation or custom and useage are permissable as are any other abbreviations or signals where the intent is not to obscure the meaning but only to facilitate communications."

In this case, the mode you are operating is the same as any other person operating on the repeater, FM (F3) so there's no question whether your buddies think you're operating something other than an authorized mode.

And, since DTMF tones are generally agreed upon and universally accepted in this country and others for passing digital information, there shouldn't be any question that you're not trying to hide the content of the message by pressing the touchtone buttons, just trying to facilititate the communications by sending data that can be relayed to the intended recipient.

That make sense?

If that's not what your buddies are talking about, ask 'em to explain it to you and have 'em cite the rules they think you're violating.

LO is an abbreviation for LOCAL oscillator. The LO is mixed with the
incoming signal to produce an output at your IF...

What do do about an LO? Gotta build one, or provide an RF signal of the
appropriate level from a test instrument, signal generator, etc.

The problem is that this is SUPPOSED to be an incentive licensing system. I started out as a Tech and moved up to Extra because I wanted more out of the hobby, hence the incentive to upgrade.

I hate to say it but completely dropping the code will trash out HF as it has done to 2m and in some areas 70cm bands.

From: cbrown@thor.lostnet.org
Message-ID: <927cb$4b13.127@news.ak.net>
Source record: 239410

Greeting all, I am looking for data on the final amp sections of an
RCA MCA38AA11B 155 mhz transciever. I am turning it into a 2 meter
amp (give a bit of a boost to the HT) and am trying to find
safe drive levels etc...

The first trasnistor in the string is a

7794-1 7803
then a
7795-1 7815
then a
7796-1 7707
and finally a pair of
7797-1 7815

Would any of you have the specs on these avail?? I have tried to find
locally
but I do not have the books and hte local library is well short on anything
electronic related.

Also there is a small pin on the bottow of the amp near the power inputs
that just runs to the circut board just to one side of the transistors. I
assume this is the bias supply, if so how many volts are needed for proper
operation? I assume bias should be applied only when the amp has input and
the output is connected to the feedl;ine via the relay. Right??

people...
>Like the only use for Morse might just be to keep the thing open enough for
the few willing to go the extra...
>
I have read countless articles on both sides of the issue and really think
that I have managed to keep an open mind. I can state several reason why the
code requirement needs to be retained and have not as yet come up with a good
reason why it should be removed. I'll not rehash all my thoughts as they have
been debated more eloquently by others ...

I am a no-code tech licensed in 1992 and, although I could probably cite many
excuses for not having acquired CW skills, the bottom line is that I have just
not done it. Period. I hardly think that lack of effort - and that is what it
all comes down to - constitutes reason for changing regulations that would
flood the bands with folks who really have no business being there. I would
love to have the priviledges of a higher class license, and one day I will
... but I believe that getting there should be a result of having learned the
necessary skills and not the result of crying 'poor me'!

->Heck even the DX columns are interesting. Keep it coming Wayne!

->Your opinions?

->(excuse me while I climb into the flame proof suit)

->George N7BUI

I don't see a whole lot of difference between the various ham
magazines. Granted CQ is a bit more contest oriented than the others
but to me they all are a rehash of each other. By rehash I mean they
all seem to have very similar if not identical articles, an article by
about VE7PMR's solar powered packet node appeared in the August issue
of 73. The same or very similar article appeared in CQ this summer. I
only occasionally see QST in the book stores but I would hazard a
guess that there was a similar article in it. So write one article and
get paid two or three times.
I prefer QST for equipment reviews and 73 for the columns.
Construction articles seem to be almost always about QRP rigs no
matter what magazine. The antenna issues are a joke. If I read one
more article about how to build a J-pole I'm going to scream!
I don't think any of the magazines are worth the cover price. I go to
the public library to look them over and if there is something that
makes an issue special I'll go out and by it. Just my opinion, that
and a quarter won't even buy you a cup of coffee...

>Heck even the DX columns are interesting. Keep it coming Wayne!

>Your opinions?

QST is for the Ads. The rest of it is mediocre.
CQ is for people who call "CQ CONTEST!"

I've written two articles for 73. The thing I don't like is the small type, and the placement of Ad's in the middle of an article. QST does the articles better, as the article will be complete without Ad's. The reason 73 uses small type is so they can get more pages in. They only have about 80,000 subscribers and can't charge enough to the advertisers for big type pages. The reason 73 has so few subscribers, is there are so few Hams. QST is in a lot of Libraries in the country, while 73 is non existent outside of the rare magazine rack sale.

Magazines are really weird about articles though. You send them an article. They say they want the rights for it, and offer you about $50 a page (payable some time in the future, but usually the month it's published). If you say yes, you are locked in. I had one article rejected by 73 after one year! I got a package in the mail, and it was my submission that I totally forgot about. They said they didn't want it any more. I'm still waiting to get paid for my July article. I wrote a letter asking when they were going to pay it, but I guess my editor has had her arms broken or something. I think with the hostile attempt to put the magazine out of business by their California editor, they are in deep financial trouble.

NA refers to the North American logging program by Dave K8CC.
It is sold for him by LTA, PO BOX 77, New Bedford, PA 16140
Telephone (216) 565-9950

NA is currently at version 9.20

I have used this program since the shareware version 4.23 was
released and find it to be excellent. For smaller computers and laptops
with floppies only it is better that CT by K1EA.

NA will do anything needed in contest logging and from my viewpoint
its ability to user define the color scheme is important.

NA also has "build your own" contest mode where you set the rules
and define the contest. I am using NA 9.20 this week to log the ARRL
Maxim Birthday Celebration with my own defined contest template.

Amir Bazak 4X6TT has started a new DX Reflector. This was
in responce to some heated words between the sponsor of the
DX Reflector out of Canada and several users regarding tense
words regarding strict enforcement of the sponsors rules.

The new 4X6TT DX Reflector was created with the promise of
it being an unmoderated, uncensored forum where everyone may
speak there minds freely on any facet of DX.

To subscribe to the 4X6TT DX Reflector send a message to

ADDRESS : MAJORDOMO@NETVISION.NET.IL
SUBJECT : SUB
TEXT : SUBSCRIBE 4X6TT-DX

Do not put any more in the message than the above it will be
an automatic robot responce.

To send a posting to the 4X6TT DX Reflector send it to

4X6TT-DX@MAIL.NETVISION.NET.IL

During the first day there were over 100 subscribers added
to the mailing list with many more expected as word gets out
of its availablity.

Source record: 239419

Sandy,

In the first 48 hours of the 4X6TT DX Reflector being operational
there were 600 subscribers placed on the mailing listby request.

The fact that this new DX list has grown so rapidly should show the
need that it has met in providing a new forum.

I can't explain the sudden personal problems that developed at the
VE7TCP DX Reflector but it would seem that several people have
decided to follow the group away.

I will contiueto view both mailers but one can only wonder what took
placebehind the scenes to create this division.

I had one but sold it because I needed the money. I found it to be a
good accurate unit for the price. However, you must physically touch
it's antenna to the antenna of the transmitter to get an accurate
reading. I was able to use it to check my 2m HT set on Hi power (5
watts) from about two feet away, but any lower power setting required
physical contact. An o'scope probe can be hooked up to it if there is
no antenna on the transmitter you are testing.

THIS IS A SINCERE REQUEST FOR HELP AND GUIDANCE...PLEASE NO MARKETING FIRMS THAT NEED HUGE SUMS OF MONEY.

I am an individual inventor currently with about 50 ideas/inventions such things as consumer products and household goods as well as some that are automotive related. Some products are only weeks away from release and need a few thousand dollars (US) to get into the marketplace. Others are months or years away from final prototypes and require more money. ALL ARE PRACTICAL, FEASIBLE and I feel SELLABLE. What I am seeking is help in contacting the right people who could help financially or manufacture prototypes of these items at their costs. REWARDS WILL BE PERCENTAGES OF ROYALTIES AND/OR ???? THANKYOU

Please direct all inquiries to cguerra@ix.netcom.com OR cguerra361@AOL.COM

In appreciation of your time & future business dealings.

Chris Guerra

To THE ENFORCER

Curt,

According to the FCC Web server, the FCC rules "are not available online".
Pretty ironic, huh?

I DID find the California Penal Code, though, and you can too if you FTP
to leginfo.public.ca.gov. Look in the pub/code/pen/484-502.8 directory.

AGAIN, Curt this deals with fraud. It is a general code that applies to
all telephone fraud, including theft of long distance service, local
service, cellular service.

So, if it is possible to steal from myself, I've done it. But of course,
if I ever get caught, I'll take the 5th.

Perhaps a few quotes from 502.7 will help you Curt.
"502.7 (a)
Any person who, knowingly, willfully, AND WITH THE INTENT TO DEFRAUD (my
caps here Curt) a person providing telephone and telegraph service,
avoids or attempts to avaoid, or aids, abets, or causes another to avoid
the lawful charge, in whole or in part, for telephone or telegraph
service by any of the following means is guilty of a misdemeanor or a
felony, except as provided in subdivision (g):
(1) By charging the service to an EXISTING TELEPHONE NUMBER or credit
card number without the authority OF THE SUBSCRIBER OR THE LAWFUL HOLDER
THEREOF."

My caps for your edification Curt.

Seems to me it's pretty clear, that I can give permission to myself, and
in fact others, to use my code.

I couldn't find the tariff , perhaps you could cite the relevant text for
us. But recall, that would only apply to CA.

BTW, leginfo shows no 502.6 to exist.

Perhaps the FCC code you cite is the new standards for manufacture of
phones ? I don't see where this would effect our topic.

Heh, Curt, perhaps you should look at those clone phones after all !

Best wishes,
Reddy

How to do it is about a day's work with Radio Snick parts. If you
want me to go into the details, I'll be glad to (RST Engineering does
this sort of thing in its audio panels to interface aircraft headsets
to business band and other FM-type radios). If you just want to buy a
readymade box, Icom as well as (I believe) some other folks I saw in
Trade-A-P make a $100 box. Your choice. $5 and a day's work or $100
and plug-n-play. Lemme know email or here.

```
Amateur Radio Newsline Monthly Information Notice
================================================

Last Revised: 09/02/95

+Amateur Radio Newsline is a weekly audio service produced by Newsline, a
+service of the Westlink Radio Network. Editorial comment, news items and
+all other business should be directed to Bill Pasternak, WA6ITF,
+Newsline's Producer and Editor-In-Chief.
E-Mail - 3241437@mcimail.com or BILLWA6ITF@aol.com
Phone/Fax - +1 805 296-7180
+ Fax senders should wait for voice prompt, then press start.

The transcribed version is produced by Dale Cary, WD0AKO from materials
provided by Newsline. and is jointly distributed to online services and
bulletin board networks by Steve Coletti and Dale Cary.

+All others are asked to not post Newsline to any BBS or network without
+the permission of Steve Coletti. There have been distribution problems
+with many of these networks recently and posting Newsline to an echoed
+conference because you haven't seen it there doesn't mean it hasn't
+already been seen elsewhere. Reposting causes wasted bandwidth and
+additional telephone charges to be incoured by the sysops of these
+volunteer networks.

The copyright owner of The Amateur Radio Newsline is Newsline. Permission
to reuse all or part of either this written, or the audio form requires
that the item be taken in it's entirety, not be subject to any further
editing or commentary, and that full credit is given to Newsline as the
source.

Permission is granted to all amateurs who want to transmit the audio
version in it's entirety over nets or repeaters. The text version may be
used for packet distribution as long as it is sent in its entirety and the
BIN header is kept intact.

NOTICE: When Newsline is transmitted in it's full form over voice or
digital forms of Amateur Radio, it is recommended that the closed circut
advisory be deleted. Audio, Computer, and Packet retransmissions must be
made without the editing or deleting of any other part of the Newsline
content. Unauthorized additional commentary to the original message is
also prohibited. To do so is a violation of copyright and subjects the
initiator to legal action by Newsline.

Newsline may also be excerpted for code practice transmissions, and may be
used as a reference source in bulletin board discussions under acceptable
```

Fair Use practices.

Any other use is not allowed without the expressed permission of Newsline.

So much for the "CW is a lid filter" argument...

There is evidence that would allow a reasonable person to conclude
that many Germans are racists. Witness the increasing neo-Nazi
groups, "Tuerken raus!", and the like. No, I don't believe it is a
true reflection of the society, but I see how people can conclude
otherwise.

"I won't go into specifics, but you're full of crap!" What the hell
kind of argument is this? In other words, you're into the famous
"proof by assertion," apparently; we should believe you just because
you said so

Subject: Re: !!!TWO CELLULAR PHONE

Curtis Wheeler (cwheeler@ccnet.com) wrote:

: Actually there is. See part 22.919 in the FCC's rules. And 18 USC 1029
: for the use of counterfeit access devices. In addition cloning phones in
: California is also enforced with section 502.6 and 502.7 of the penal
: code and CPUC tariff 3T, rule 19-B2. Your mileage may vary in Texas.
: All of these are used to enforce the prohibition of cloning ESN's and
: none offer an exemption for your own, personal phone.

: Curtis Wheeler - Pleasanton, CA

Curt,

I posted the text of 18 USC 1029 but apparently Usenet ate it, since I never saw it reflect back to me. Persons interested in the actual text can download it from www.

This code includes all access devices...your computer password, your ATM card, your Visa card number, your long distance credit card... and for the edification of others, is a general way of handing fraud.

The issue here is, what is fraud ? Can you defraud yourself ?

Each paragraph in this code includes the requirement "with intent to defraud". Perhaps California is different, but here in Texas you cannot defraud yourself. It would be no different from using your internet access password from more than one computer. It's ok to use your own code, but NOT somebody else's.

Fraud would be commited when you used somebody else's ESN with the intent to get free phone service. In our case, we have a valid account, and intend to pay for the service.

Re: FCC rules. I am curious why FCC rules would be interpreted differently by SW Bell than by PacTel/Air Touch. I will look this up, and get back to everyone.

But Curt, your 18 USC 1029reference is bogus. We'll see if the FCC one checks out.

Could you post the relevant text of the CA Penal codes ?

Curt, remember your posts go worldwide. If your state legislators have screwed you, don't extrapolate it to the rest of us.

If you press the CALL key while turning on, you will get a channel scope demonstration.

To expand Rx and/or Tx range on the DR610T
Remove the back of the front panel. (Remove the 2 screws)
Cut the RED jumper wire for Rx expansion only
Cut both RED and BLUE wires for Tx Expansion.
Reset the unit after the MOD by pressing and holding the F key while turning on.
Ranges:
Tx 138-173.995MHz
Rx 108-173,995MHz (AM in the 108-135,995MHz range)
400-511,995MHz
800-998.9MHz (DR610E only!) You also have to close the 'D' solder pad on the RF board.

The DR610E can also be modified by a keyboard sequence while in key-lock mode.

Message-ID: <42b10k$54h@ralph.vnet.net>
Source record: 239239

Christian: a couple of things & I'm sure you will get other replies -

1) Why wait to sudy for your codeless? Learn while you study - get a study guide at Radio Shack or someplace & go to it. You can listen too, but why not do both. Then go for your upgrade when you get used to radioing on 2 meters, 6 or whatever.

2) I'm not sure if your scanner has a BFO or sideband mode, but you will need it to listen to just about all activity on the HF bands. Most scanners will pick up 2 meter fm, but not too many will allow you to listen to sideband.

3) Why put all your money into scanners & receivers. Buy a 2 meter transceiver so you can get on the air as soon as you get your license.

Just some thoughts - Good Luck!.....Terry KD4GBO

3986. Re: Newbie Questions, Just Starting

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-03 00:00:00 UTC
From: Terry McComb <Spackrat@mail.cybernetics.net>
Message-ID: <42b1v2$54h@ralph.vnet.net>
Source record: 239240

One other thing. 29-30 Mhz (10 meter band) is the general & advanced portion of 10M - not as much activity as 28-28.5 Mhz, which is the novice portion (28 - 28.3 is code & packet, 28.3 - 28.5 is voice - sideband). Once again, you scanner or receiver must be able to do sideband to make any sense out of the voice transmissions.

We are about at the low spot in an 11 year sunspot cycle - without getting real technical, sunspots create conditions that allow HF signals to bounce off layers in the atmosphere & get long distance communications. 10 meters is probably the most affected by a lack of sunspots - one reason why you may not hear much on 28 - 30 Mhz. But, this band does open up fairly frequently for "short skip" - communications between stations a few hundred miles apart rather than a few thousand, so keep your ears listening. When the sunspot cycle increases again, 10 meters will give you the longest skips possible - you can literally talk around the world on only a few watts (or evenless) of power!

Obviously the better your antenna, the better you will hear. Start studying! 73 Terry

3987. Indy Balloon Flight Sept 9

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-03 00:00:00 UTC
From: mgarrett@prairienet.org
Message-ID: <42b6ot$fq5@vixen.cso.uiuc.edu>
Source record: 239241

A Reminder:

Windtrax 5-95, a continuing series of Amateur radio balloon flights for fun and education will be having it's first balloon launch at the New Agusta Public Academy in Indianapolis, IN on Saturday, September 9, 1995 at 7:30 AM EST/CDT 12:30UTC.
The balloon will lift aloft to 90,000 feet Amateur Television (ATV) on 439.250 (vertical polarity) at 1.5 watts showing two camera views and a color video Id'er.
GPS/APRS/packet running 1200 baud on 446.000 running 1 watt giving latitude/longitude and altitude information.
And a Cross Band Repeater. Input will be on 144.300 Fm with outputs on 444.850 at 250 mw and on 52.525 using a recrystalled and tweaked baby monitor transmitter at approxmately 80 mw.
A HF net on 3871 khz will be held to provide status and launch coordination to all who check in.
All Amateurs are invited to participate in this balloon flight. Schools that wish to participate in this flight are encouraged to contact Doug Craig at the New Agusta Public School in Indianapolis, IN for more information on how to involve their school in this and future balloon flights from the Academy.

Sponsors of this flight are the New Agusta Public Academy and Chuck Crist, WB9IHS; Paul Bohrer, W9DUU and Terry Hudson, KT9V

Rain Dates will be announced on the 3871 khz net and posted here and on packet as soon as possible.

3988. Re: Scanner Modifications

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-03 00:00:00 UTC
From: rsell87265@aol.com
Message-ID: <42beii$gb8@newsbf02.news.aol.com>
Source record: 239242

I'm interested in any info on modifications to ICOM IC-Z1A hand held ham radio and a Trident TR2400 scanner (haven't seen ANY info on this, they say it can't be done).
Reply to me to this ID or at VVJT06B@prodigy.com

Thanks in advance,

Roger

3989. ACC NOTES

Newsgroup: rec.radio.amateur.misc

Does anyone have the ACC Notes for the following time periods:

MAY 85 to MARCH 86
APRIL 87 to SEPTEMBER 87
APRIL 88 to MARCH 1992
SEPTEMBER 92 to SEPTEMBER 93
MARCH 94 to TODAY

I can send you a SASE and include the cost for photocopying/hassle.

Thanks in advance.

Joel - N7KOJ - jharrin503@aol.com

Roger,

I own the 742, and aside from a glitch in the squelch circuit, I've had
nothing but praises for the radio. Think it works absolutely fine.

As for the amp, look at RF concepts new model. Off hand I dont recall the
exact one, but they've got a high powered Dual Band for sale, but its in the
touchy $700 range you mentioned.

Charlie

* Info-Hams Digest Sat, 2 Sep 95 Volume 95 : Issue 755
* Info-Hams Digest Sat, 2 Sep 95 Volume 95 : Issue 756

Is there a reason I get so many issues from Info-Hams? Both of these are 28K...

And all those goodie files that are attached. Many have errors and don't make it and fewer still have anything of interest... would it be better to just announce the file and give the URL? Certainly we could save the bandwidth...

I may be out of line but I am going to say my piece since everyone else is.
I am a Technician class and am preparing to take my MROP. Even after I get my GROL I wont be able to move up and try to get a career due to the fact that I just can't get code. The sounds sound the same and I have tried for years to get it.
I wouldn't hurt my feelings a bit to see code go out. I saw the posting where one person said that amature radio is incentive based and all of that. Well has it ever occured to anyone that all of these levels and beurocracy is why amature radio has gone dramaticly down in popularity? I say if you want to do packet, have test and training devoted to packet only and tv, etc. If HAMs cling on to the past, amature radio will become a thing of the past.

Also why the devil should we keep code when technology has made it obsolete? Even in third world countries they have voice communications?

If someone has a firm argument for code besides the argument that it is an "initiation right" please tell it to me. Remember this isn't a club, this used to be the way years ago people kept in contact with each other. And why should I pay out my money for an initiation right?

Like it or not, but we in the younger generation will eventually get rid of code.

3994. Ham Radio Test Simulators - Mac

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-03 00:00:00 UTC
From: john@wd1v.mv.com
Message-ID: <john-0309950823390001@wd1v.mv.com>
Source record: 239248

FREE - NEW Macintosh HAM TEST SIMULATORS

Studying for a ham test and have access to an Mac?

Upgrade Fast! Simulate the test and get S T I M U L A T E D!

Scores of 90% or > even get applause!

The new Macintosh Ham Test Simulators are HERE (and there if you can FTP)!

o Novice Ham Test 5.0 SA.sea
o Technician Ham Test 5.0 SA.sea
o General Ham Test 5.0 SA.sea
o Advanced Ham Test 5.1 SA.sea
o Extra Ham Test 5.0 SA.sea

The latest version "5" feature:

HyperCard 2.3 as a stand-alone application (SA) eliminating
your need to have HyperCard. All you need is a Mac with 4
Meg of memory and version System 7 or greater.

Each version "5" Ham Test Simulator has the latest questions
as prepared by the Question Pool Committee.

Each version "5" Ham Test Simulator is FREE OF CHARGE and work the
same way as the originals did (written by Diana, KC1SP).

You may obtain a version "5" Ham Test Simulator by mailing me a *FORMATTED
disk (1 per test) and include a Self Addressed and Stamped disk mailer for
the return.

Each version "5" Ham Test Simulator is also bundled with a shareware CW
program called MacMorse 1.4 written by Doug, WB0EON.

Also included in the version "5" collection are text files that relate an
interesting variety of ideas about the best way to study CW and prepare
for tests.

Or warm your phone line and get JUST the tests:

America On Line - Macintosh Ham Radio Section

or:

ftp://oak.oakland.edu//pub3/hamradio/mac/theory-and-morse/AdvancedHamTest.sea.bin
(Aug 30th)
ftp://oak.oakland.edu//pub3/hamradio/mac/theory-and-morse/ExtraHamTest.sea.bin
ftp://oak.oakland.edu//pub3/hamradio/mac/theory-and-morse/GeneralHamTest.sea.bin

ftp://oak.oakland.edu//pub3/hamradio/mac/theory-and-morse/NoviceHamTest.sea.bin
ftp://oak.oakland.edu//pub3/hamradio/mac/theory-and-morse/TechnicianHamTest.sea.bin

Your comments and suggestions for future versions are always welcome. Stay
in touch
and good luck with YOUR next test!

3995. Hams really suck?

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-03 00:00:00 UTC
From: k1oik@ccsnet.com
Message-ID: <797116592701@ccsnet.com>
Source record: 239249

Recently I wrote a message about a Cape Cod ham where he made comments that were unflattering about Jewish people on the 147.045 repeater. The message was posted and only one comment was received. Other Cape Cod hams just looked the other way and I feel Cape Cod hams are similar to ALL hams. Are hams like the Germans of the 193O's?:

[Written by Martin Niemoeller, the German Lutheran pastor arrested by the Gestapo and sent to Dachau concentration camp in 1938; the Allied forces freed him in 1945:]

In Germany, the Nazis first came for the Communists, and I didn't speak up because I wasn't a Communist. Then they came for the Jews, and I didn't speak up because I wasn't a Jew. Then they came for the trade unionists, and I didn't speak up because I wasn't a trade unionist. Then they came for the Catholics, but I didn't speak up because I was a Protestant. Then they came for me, and by that time there was no one left to speak up for me.

This same ham also made hateful comments about kids and was a regular participant in the wars on 14.313 and I sent yet another comment out about that and zero responses.

Recently I engaged several hams on the air and was very careful NOT to volunteer any information about myself but I asked the hams about them. I asked them about their jobs, their kids, their other hobbies, where they were from etc. NOT ONE HAM gave a God damn about me. Not ONE asked me a thing about my interests, my job, my kids, my life. It is not only me. When I listen it is rare for any ham to show any actual interest in the PERSON they are talking to.

I realize many that know me via ham radio and postings on the internet think I am a nut case (which I will not deny). And call me that if you must but please the only thing worse than calling me a typical ham is to call me a child molester. A ham radio operator usually is a clone of an uncaring cliche filled machine. Hams are not human. They waste valuable radio frequency spectrum with total babble. It is rare for a ham to provide a meaningful public service and almost as rare for a ham to educate himself or others in the world of technology.

The F.C.C. is well aware of this but there are many hams in the F.C.C. and the F.C.C. is controlled by the hams "N.R.A.", the American Radio Relay League. If Congress ever becomes aware of the waste of radio spectrum the hams will have had it (although most of them have had it anyway as their average age has risen from 27 in 1960 to 54 today). It is rare for any young person to be interested in ham radio.

It is easy to see why.

Burt.

The IF10C chipset doesn't involve eproms -- it consists of a serial line driver and a UART. These chips can easily be obtained from electronic parts suppliers. For the serial driver you need a 4040 chip and for the UART, any version of the 8250. They will not be expensive; less than $10 in Canada.

Buona fortuna,
Brian

3999. Help with Ten-Tec model 255 Power supply !!!

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-03 00:00:00 UTC
From: fcarey@direct.ca
Message-ID: <42cj8t$1jm@grid.Direct.CA>
Source record: 239253

I am reparing a model Ten-Tec 255 power supply, for a elderly blind gentleman who has just given up cigars (after a heart attack) and after being told he cannot smoke, found his beloved Omni had given up the ghost! I gladly offered to take a look for him (you can only listen to classical music for so long...) as he is still one of the best CW ops around. I found both power transistors open, (which I replaced, however, I now have a problem with the reg board, a couple resistors, and Q1 are smoked beyond recognition! The manuals have been mis-placed, and I would be for-ever in the debt of someone who could e-mail me the parts list, or better yet attach, a procom fax file of the schematic. (gif, jpg etc.etc.)
Thank you for reading this...

Cwave is a utility for Windows. If you have a shortwave
radio and a Windows compatible sound card, Cwave will
convert Morse Code into readable text, in real-time.
No TNC or de-modulator is required.

Precise sampling and filtering of the incoming signal is
provided, and the converted text is presented in a
convenient text editor.

Cwave is shareware, and is available for file transfer at:
ftp.eskimo.com/u/p/pika/cwave

Thank you.

k1oik@ccsnet.com sed:

[much deleted]
:>It is rare for any young person to be interested in ham radio.

:>It is easy to see why.
:>Burt.

I can agree with much of what you say Burt but to the contrary it's the WAY you say it.

Question:...who is of the pedagogical persuasion here in the first place? Have YOU interested any young people in amateur radio lately? Me? [Yes I have], but I'm not a professional teacher...when I was it was in the military. ;-D

Just a point...I see how those involved in the code/no-code debate act here on the net, I'm deeply concerned about how they'll act when they finally DO obtain HF privileges.

I believe your post reflects how we are today and not just in amateur radio. At least several blocks northwest of you here in Massachusetts and just over the NH stateline people drive as if the road was made for one at a time and them only. My 13 year old son was hit by a car three days ago...whilst he was in a crosswalk. Fortunately he sustained only minor injuries. [Did not hit his head. Sprained his arm, some bruises and a little road-rash on his legs] Scared the hell outta my wife and me when we got the phone call and heard, "Your son was hit by a car!" We raced [drove] down the street [safely mind-you but anxious and out of breath] only to have the ambulance turn onto the street just as we arrived.

The police did not cite the driver of the car. "She was not exceeding the speed limit." and "She did not run a stop sign." So, that leaves me with the conclusion that in Mass. it IS okay to run down "pedestrians" and be negligent when crossing an intersection. [My son was on his bicycle but had stopped and looked before crossing. In Mass. law anyone (except motorists) is considered a pedestrian while in a crosswalk) To hell with those stupid signs that people ignore to begin with. You know, those signs they place in the crosswalks that say, "STOP for pedestrians in Crosswalk. STATE LAW $100 fine." Sheeeeeit!

I feel my son would have be hurt a lot worse had he been walking. His bike took the brunt of the shock.

I went to the police station to obtain a copy of the accident report the next morning. As I was standing there a young woman walked up and asked for a copy of the same accident report. I asked her [I was not angry, at all] "Are you the one who hit the kid on the bicycle?" [I did not see her at the accident

site] She blankly stared straight ahead and stated [a little forcefully] "He wasn't hit!" [I guess he was hugged and kissed by her car] She then said, "I don't want to talk about it! Officer XXXXX XXXXX told me that if anyone has any questions to ask him!" Did she ask how my son was doing? If he was okay? NO! She had that STUPID blank look and stared straight ahead not once looking at me or my way. Now that made me mad (angry)...;) [I bet she had that same blank stare as she was driving. I mean it was hard to tell if anyone was home!]

I was also a little upset by the fact that she followed my son to his friends house, a block away, telling him it was his fault...all the way there. The first thing I did when I got home from the police station was to call an attorney. I learned a few things. Tuesday I will call more attorneys...like James Sokolov...shopping around. ;-D

I was not angry or upset with this woman, at all, until she indicated to me that she could give a spit less about anyone but herself. Her mistake. Before this I was more thankful than anything [I still am] that my son is okay. I hope he'll enjoy the new bicycle she's going to get him.

To get back to the point...your theme is correct. People [in general] could care less about anyone but themselves nowadays. There are still many "good" people out there but out of self-preservation or whatever reasons they avoid speaking up.

Thanks folks on r.r.a.m. for letting me get this off my chest. Now back to our regulary scheduled flame throwing.

I guess it depends on what area of the country you're in Burt. I lived in Mississippi, on the Gulf Coast, when I was first licensed...KA5MWD. The folks there were very friendly. Went to Portsmouth, New Hampshire from there and the folks were okay there. New Mexico they were GREAT! Here in Mass. they're GREAT but only after getting to know them. They're very reserved and it takes some work getting into most of their shells. I'm not that thin skinned myself anymore. ;-D

I've said 'nuff fer now.

Cheers!

I think this whole argument is based on a flawed premise. This is not gestalt. A society is composed of individuals with many diverse opinions. To say germans are racist is like saying white people are crooks; or oriental men beat their wives. This of course is nonsense. It is only correct to say some white people are crooks and some oriental men beat their wives. I realize this is painfully obvious, but it is equally obvious that it is often overlooked.
I personally know many german people - beautiful, warm, and loving folks who abhor racism in all its ugly manifestations !

Easy maybe, but it's really hard to play around with the cat's
whisker using that kind of crystal! What fun is it without that?

SB DX @ ALLBBS $OPDX.220
Ohio/Penn DX Bulletin No. 220

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 220
BID: $OPDX.220
September 4, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, NA2M, WB4LFM, K4CEF & Southeastern Cluster Group, N4VZ, KK6EK, AA8SM, W9SZ, K0EU, 425 DX News, Inside DX, CT1FCE, F6AJA & Les Nouvelles DX (LNDX), JR2BNF, JH1ORA, LA5IIA, PS7AB & PY-DX Bulletin and VE3BW for the following DX information.

3A, MONACO. Luciano, I1YRL, will be back in 3A-land during some weekend in September. There were no specific dates mentioned. He is usually active as 3A/I1YRL and can be found on all bands and modes.

3B8, MAURITIUS. Didier, F5PXQ, will be active as 3B8/F5PXQ from October 26-30th. He will also be active in the CQWW SSB Contest. His operations will be on 20-10 meters including the WARC bands.

3B9, RODRIGUES ISLANDS. 3B9FR has been showing up quite regularly on 30 meters. Look for him around 10103 kHz at 0301z or between 1130 and 1230z.

8R, WAKENNAAM (GUYANA). There has been a report that Ed, 8R1AK, has announced that he will be traveling to IOTA SA-68 (located in the Atlantic Coast Group) for one week. His activity was to begin sometime last week. He will be using the call of 8R1AK/P.

CE0Z, JUAN FERNANDEZ (Update). Randy, K0EU, reports the following: Equipment plans, frequencies, and QSL route have been finalized for the September 1995 Juan Fernandez DXpedition. K0EU, K4UEE, and K0IYF will operate using the callsign "CE0Z" for one week of operation starting September 13 and ending September 20. Cushcraft continues their enthusiastic support of DXing with a generous donation of two of the antennas for this DXpedition. Other donations are encouraged. Please send them via K4UEE.
There should be no overlap between the XR0Z Salas y Gomez (counts as Easter Island for DXCC) DXpedition and the CE0Z DXpedition, since the XR0Z group plans to go QRT on September 11th. Frequencies were

chosen to avoid conflict with the larger XR0Y operation that will be QRV from September 5 to September 21. Emphasis will be placed on low bands, WARC bands, RTTY, and satellite. Planned frequencies for CE0Z are:
CW - 1821.5 (QSX 1830), 3503, 7003, 10103, 14033, 18083, 21033, 24903 and 28003 kHz
SSB - 3790, 7060, 14180, 18130, 21280, 24930 and 28480 kHz
RTTY - 7085, 14085, 18105, 21085 and 28185 kHz

The North American Satellite DX Fund has supplied a compact set of satellite antennas, so there will be activity on AO-10, AO-13, and RS-15. Excellent mutual windows exist for both North America and Europe. Only one short mutual window exists to Japan, though, and non-JA DXers are asked to QRX during the period from 1115Z to 1230z on September 14th so that as many JA operators can get through as possible. Satellite operation will be mainly CW. QSL route is via K0IYF.
On a sad note, Mickey, CE3ESS, recently had to fly his oldest son to the UCLA medical center for treatment of a brain tumor. Mickey has been a godsend in handling many of the logistics for this operation from his Santiago QTH. Our thoughts and prayers are with Mickey and his son during this difficult time..... de Randy Martin K0EU

CQ5, A PORTUGUESE LIGHTHOUSE IS GOING TO BE ACTIVE IN SETEMBER! A special event station will be active at a lighthouse in Lea-Matosinhos-Porto, Portugal. Special callsigns will be used during the following dates: September 23-24th - CQ5H and September 30th-October 1st - CQ5L. Activity will be on CW/SSB, 80-10 meters (160 possible) meters and 2 meters.

EP2AK PIRATE. A. Sadjadian, EP2FM, reports EP2AK is a pirate along with any other station using EP callsigns from 1982 until now. Illegal operators are causing a very harmful effect on their efforts to revive the activity in Iran. EP2FM hopes he will be able to be active again soon. (Read OPDX.219 for more details.)

FR, REUNION ISLAND. Didier, F5PXQ, will be active as FR/F5PXQ from October 18-25th and November 15-31st. His operations will be on 20-10 meters including the WARC bands.

FT5, CROZET. Starting in December until February 1997, Jean Jacques, F5SZK, and Samuel, F5IJT, will be active as FT5WF and FT5WG respectively from Crozet.

KH9, WAKE ISLAND. It is reported that V73O will be active as AB7HB/KH9 from September 15th to October 15th. Activity will be on all bands including the WARC bands. QSL via P.O. Box 358, APO AP 96555.

J2, DJIBOUTI. Patrick, F5SFD, will start his activity in September as J28PP for the next two years. He will be active on SSB and CW. QSL via F5PWH.

P4, ARUBA. Both P40JT and P40BT will be active from Aruba in the time period of September 21-28th. QSL to WV7Y direct. During the CQWW RTTY Contest (September 23-24th) P40JT will be a single operator entry and

active on all bands 80-10 meters. All digital modes will be available including Clover, Amtor, Pactor, after the contest. The operators will be Jay/WS7I and Betsy/WV7Y.

SOUTHEASTERN DX CLUB WEB PAGE. Sam, KB4NJ, reports that the SEDXC will have a web page on-line beginning the first week of September. The URL address for the site is www.peachmall.com. They plan to include the OPDX bulletin as part of the content under the SEDXC home page area, as well as their club newsletter, ARRL DX bulletins, and other material, as of yet undetermined.

TY, BENIN. A group of three Norwegian hams will go on a DXpedition to Benin September 16-26th this year. The operators, who are members of LA-DX Group, are LA9IY/Bjorn, LA4GHA/Roger and LA5IIA/Johnny. They report their licence papers have already been sent to the communication authorities in Cotonou, Benin, and they will receive their licence upon their arrival in Cotonou September 16th. Their expected callsign is to be TY8G. Operations will be on all bands and modes, but with concentration on CW, low bands and the WARC bands. Suggested frequencies will be:
SSB - 1841, 3755, 7055, 14145, 18145, 21185, 24945 and 28455 kHz
CW - 1827, 3515, 7015, 10115, 14005, 18075, 21005, 24895 and 28005
(Split frequencies will be announced on the air.)
RTTY - Mainly 14085 +/- QRM listening up, but watch other bands as well.
OSCAR 13B - 145.895 +/- QRM listening up.
Donation for this operation is welcome and any contributions can be sent to LA-DX Group c/o Ruth Tollefsen, P.O.Box 17 Tveita, N-0617 Oslo. QSL via bureau or direct. QSL route is via LA8G, P.O. Box 5626, N-7002 Trondheim, Norway.

V2, ANTIGUA (UPDATE). Tyler, KF3P, one of the operators of the Frankford Radio Club states he has not received his V2 callsign yet, but he believes it will be V26P. Tyler plans on operating a lot of RTTY and some CW before and after the contest (during October 23rd thru November 1st, excluding the contest weekend). He says he will QSY and/or make skeds for all bands as much as possible. QSL to his home call.

V4, ST. KITTS. Joe, VE3BW, states he will be active in the CQWW SSB Contest (October 28-29th). The callsign he will use is V47BW.

VR2, HONG KONG. The following was relayed to OPDX and was reported in Inside DX: "On June 30, 1997, Hong Kong will return to Chinese sovereignty. Will this be the end of a DXCC country? Apparently not, through negotiations with Chinese officials Hong Kong will remain as a special administrative region of China and Hong Kong's lifestyle will remain intact for the next 50 years, including amateur radio. Those amateurs using VR2 callsigns at this time will keep the same callsign, while VS6 stations will substitute the VR2 prefix."

VU7, ANDAMAN ISLANDS. Information from the Tokyo PacketCluster indicate that Jim, VK9NS, was staying at Port Blair, Andaman Islands, but may

have left now as of September 1st. He was reportedly operating as VU2JPS as a 2nd operator. The report also states Jim was not making a lot of QSOs because of poor propagation and that he planned to build up an antenna for 40 meter. There were no QSNs reported on the Ohio/Penn Network to confirm this activity.

XU, KAMPUCHEA. The 425 DX News reports Franco, XU1FL, a university teacher in the capital city of Kampuchea, is now active. Franco is working at the "New Umanity", a co-operational program between the Sassari University and a Phnom Penh university. Daily skeds are planned on 14319 KHz between 1430 and 1500z, at the end of the technical contacts between the two universities. QSL via I8KUT.

XR0Y/B, EASTER ISLAND BEACON. By the time you read this the Easter DXpeditions may have already started. The DXpedition's beacon (XR0Y/B) has been operational every three minutes on 14100 kHz.

ZL8, KERMADEC. There has been a report that Ron, ZL1AMO, stating that the New Zealand authorities have had a change of mind and are now willing to allow a person to remain on the islands after sunset, which is good news. Ron states that several ZLs including himself are planning an early 1996 operation from there. The main obstacle now appears to be the $45,000 needed for transportation and other DXpedition costs.

ZW8, BRAZIL (ATTENTION PREFIX HUNTERS!). Rony, PS7AB, Editor of the PY-DX Bulletin, reports that during the CQWW SSB DX Contest, look for ZW8DX to be active. QSL via PS8DX, PO Box 096, Teresina/PI, 64001-970, Brazil.

A NEW DX REFLECTOR (InterNet News). As promised, Amir, 4X6TT, has activated a new DX Reflector which will be known as the "4X6TT DX Reflector". This will be an unmoderated reflector, no censorship, no rules, but instead it encourages freedom of expression, welcomes new ideas and fresh insights on DXing, innovative thinking, etc. DXers throughout the world are welcome to join in to what is promised to be lively discussions.

To subscribe, send a message to:
majordomo@netvision.net.il

In the subject line, write: sub

In the text area write: subscribe 4x6tt-dx

To post a message: 4x6tt-dx@netvision.net.il

Congratulations to Amir for taking the time to provide the DX Community with an alternative mailing list to carry on discussions with different prospective ideas and views.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to one of the three following addresses: kb8nw@barf80.nshore.org / aq474@cleveland.freenet.edu / DFJH48A@prodigy.com

- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

Burt,
Forget two meters old man, turn your beams down south to Alabama
and we'll ask you all kinds of good'ole questions. You can even practice
on your drawl! As for Yankee hams, I've talked to them from time to time,
good conversations most of the time. Tell'ya what Burt, they must have a
little cabin fever or something, get on 28.375 when the conditions are
favorable and we'll talk up a storm! We got one local from N. Minn. If
we can break him of his northern ways (eating ludafisk) we can sure fix
you up. Bill, AC4LC, and I mean it!

Terry McComb <Terry McComb <Spackrat@mail.cybernetics.net>>
wrote:
|One other thing. 29-30 Mhz (10 meter band) is the general & advanced
|portion of 10M - not as much activity as 28-28.5 Mhz, which is the novice
|portion (28 - 28.3 is code & packet, 28.3 - 28.5 is voice - sideband).

Minor correction...

28.1 - 28.5 for novices and techs; 28.0 - 28.1 is restricted to
generals and above [and no Extra only portion below 28.025, either].

The 28.3 boundary for voice is correct. And novice/techs are
restricted to SSB, I think - no other voice modes allowed.

Charles is right about RPI. W2SZ is one of the premier college clubs in the nation. One other college club here in the Albany, New York area is that of Union College, W2UC. Union is also an engineering school in Schenectady, NY with close ties to General Electric, Lockheed-Martin, and other corporations. The W2UC club station is currently housed at The Schenectady Museum and The museum club station recently
completed construction of a new HF antenna structure atop the Planetarium rotunda with an 11 element log periodic antenna, which was purchased with monies received as a grant from the Lockheed-Martin "Nova Society".
-
Amateur radio activity should not be a reason to make a decision on a college; consider curriculum for your major, the percentage of recent graduates now working in their chosen field, tuition and other costs, and grant and tuition reimbursement opportunities. But I can understand your need to know...!!
Good luck in your college pursuits!!

Stephan Anderman, WA3RKB
(former Lansdale/Doylestown, PA area resident)

Subject: Reply: DUMB

Hi Burt ... name is Don and the qth is Randolph MA. Read with interest your thoughts and comments on the hobby, and especially with respect to your personal experiences lately. It's unfortunate that those ethnic comments were made on one or more occasions. I'm curious if you broke into the 'qso' at the time and stated your disgust? If you merely continued to monitor in silence, aren't you putting yourself in the same position as those you accuse? It's also possible that the persons involved do not have packet capabilities and would therefore never see your response. In anycase, I certainly do NOT condone the situation as you've described, and never have. Amateur radio is definitely not the platform to discuss racial and ethnic prejudices when they are conveying the hatred views, rather than the issues in general.

Unfortunately, in our permissive society, no subject seems to be taboo, and no medium is off-limits to the biggots out there. I would certainly advise you to speak out the next time such conversation is heard. It's entirely possible that others will join in and take a positive position with you. A comment or two to the control operator of the repeater would certainly be in order!

I will not comment on the rest of that situation, but would like to add a few thoughts on the last part of your bulletin, namely the situation with younger prospective hams (or lack of). I'm 53 years old, and have been licensed since 1977. I was extremely enthusiastic about this hobby for a long time, having had a curiosity on radio in general since a teen-ager. The problem I faced then was not being able to share this enthusiasm with anyone. Back in the 50's, it was difficult to obtain information on things like hobbys, except maybe stamp collecting or baseball cards! OK, that is probably an exaggeration, but I think you get my point. Now, let's look at the situation today. Has it really changed all that much? Pick up a daily newspaper or check out the "news" on any local/national level on the boob tube. It's rare that you see mention made of "us". WHY !!!! I'll suggest that public relations in this hobby is practically non-existent EXCEPT within the amateur community. Check out the League's endless supply of literature and video offerings ... they are many, BUT who knows about it except the amateur community? Hell, you could make yourself known to a crowd and maybe one or two out of a hundred would have even an incling of who you are or what you actually do! Now isn't that a statement in itself?

The last comment I'd like to offer with regards to this hobby ... it's not cheap! How many "kids" have the resources to even consider getting into it. Let's not fool ourselves otherwise. The days of building ones' shack are long gone. The've been that way for years. Todays technology has made that prohibitive, and the newer modes of operation make it impossible to homebrew the hardware. Robots put together the surface-mounted pc boards now, not people. Hell, even the manufacturers of equipment can't really fix the goods they sell; they just replace modules that fail with new ones.

Having said all that Burt, let's look at one final observation. Especially with kids (of ALL ages), there are other alternatives for casual chance meetings and conversation. Internet and other on-line services provide an almost limitless platform for this and offer a multitude of services. Why would a kid (not knowing any local hams) take the time to research our hobby, invest whatever money he/she has in very expensive equipment ?? I sometimes ask myself those same questions, and I'm a "young" 53 !! I monitor the local repeaters about once or twice a week, and then shut the radio off. Just not worth the aggrevation anymore. Sorry, but that's just the way I feel about this hobby now Burt. I'm a trucker by profession, and keep a cb in the truck. It brings me more enjoyment !!! No egos to feed on the 11 meter band .. can anyone say that about amateur radio. The one-upsmanship long turned me off. I could care less about ones' shack, or what antennas one has ... big deal! Tell me something about yourself, and don't tell me about the *&&&&^% weather! Don't thank me for the qso after the rst report either, 'cuz we didn't have one!

Sorry if I filled the screen on this one Burt, but you opened up old wounds here. I have a very casual opinion of amateur radio these past few years and could care less about it. I'll miss it when Uncle Sam finally takes the hobby away from us, but won't lose any sleep over it. The good people down in Newington long missed the boat in dealing with reality. They have always held official status with the FCC in representing the hobby, but take a look at any issue of QST ... look at their paid subscription numbers (which represent membership) ... it's never come close to more than 40% of the total ham population of the U.S.A. Now, isn't that a statement !! In anycase, thanks for giving me the opportunity to express my feelings. Best wishes and good luck!

4020. My response to WB1O (ham molesters)

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-03 00:00:00 UTC
From: k1oik@ccsnet.com
Message-ID: <7971-258939701@ccsnet.com>
Source record: 239274

You said (WB1O):

I'm curious if you broke into the 'qso' at the time and stated your
disgust? If you merely continued to monitor in silence, aren't you
putting yourself in the same position as those you accuse? It's also
possible that the persons involved do not have packet capabilities and
would therefore never see your response.

I replied (K1OIK).

No I did not break in THIS time but several years ago when the same ham
made a remark about Jewish lawyers I did confront him FIRST on 20 meters
(14.313) and then again on the local 147.045 repeater. We really had it
out and he denied he was anti Semitic and went into a tirade about what
the definition of anti Semitism is. I think I should have confronted him
again but he gets off on face offs so I thought the back door approach would
be effective. He did have packet capabilties but has not been on to see
my remarks.

You said:
I would certainly advise you to speak out the next time such
conversation is heard. It's entirely possible that others will join in
and take a positive position with you. A comment or two to the control
operator of the repeater would certainly be in order!

I replied:

You are probably correct, partly, but no others will join in especially
here on Cape Cod. Cape Cod hams have no back bone, ZERO (except of
course the guy smearing Jewish people). The control operator is a great
guy but he does not "get involved."

You said:

Pick up a daily newspaper or check out the "news" on any local/national
level on the boob tube. It's rare that you see mention made of "us".
WHY !!!! I'll suggest that public relations in this hobby is
practically non-existent EXCEPT within the amateur community.

I repled:

Hams no longer matter. They do nothing any longer to advance technology
and they are a disaster in most disasters (but they are great at training
for disasters). Cell phones do the job most often and most hams are good
at getting fat and sitting on their butts. There is nothing for the
public to relate to. Certainly NTS "traffic" is a total waste.

You said:

The last comment I'd like to offer with regards to this hobby ... it's not cheap! How many "kids" have the resources to even consider getting into it. Let's not fool ourselves otherwise. The days of building ones' shack are long gone. The've been that way for years. Todays technology has made that prohibitive, and the newer modes of operation make it impossible to homebrew the hardware. Robots put together the surface-mounted pc boards now, not people. Hell, even the manufacturers of equipment can't really fix the goods they sell; they just replace modules that fail with new ones.

I replied:
Your point is well taken with one big exception. Ham radio is a very cheap. I bought a Swan 240 in 1964 for $420, in today's money that is at least $2000. And that rig was SSB only, three bands and not all of them and no bells and whistles. Think of what you could buy today for $2OOO. My daughter at age 8 bought her own rig for $75 of birthday money and talked to Australia on it. It was an older Heath tube rig.

You said:

I'm a trucker by profession, and keep a cb in the truck. It brings me more enjoyment !!! No egos to feed on the 11 meter band .. can anyone say that about amateur radio. The one-upsmanship long turned me off. I could care less about ones' shack, or what antennas one has ... big deal! Tell me something about yourself, and don't tell me about the *&&&&^% weather! Don't thank me for the qso after the rst report either, 'cuz we didn't have one!

I replied:

CBers are usually stupid but they are very interesting and caring people. Hams are very intelligent but care little of anything other than themselves. Hams measure themselves by points in a contest whereas most real men have a different way to measure their REAL accomplishments. As far as myself I am a teacher of Electronics at Cape Cod Tech (Vocational High School), we also have a broadcast station there (WCCT-FM). Age is an elderly 50 years, and have been a ham for 35 years. My daughter is KA1VBQ, she is fourteen years old. Oh, and I am interested in weather, really!

Thanks for your most thoughtful response.

Burt

4022. LO? what is it?!

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-03 00:00:00 UTC
From: hduff@humnet.humberc.on.ca
Message-ID: <797156889501@humnet.humberc.on.ca>
Source record: 239276

C0>Hello, i am wanting to build a 2.3GHz transverter, yet i have NO idea what t
C0>LO input is or what i connect to it! i have looked at the ARRL handbook and
C0>ARRL uhf/microwave project man. yet they do not explain it at all.
C0>i will be trying to build the 2.3GHz xverter in the arrl book, and useing
C0>either a 2m HT for IF or a 2m mobile.

C0>what do i do about LO?

C0>DAvid
C0>|---|
C0>| David Roseman | c002@lehigh.edu OUTTA ORDER!
C0>| | Saucon Valley Sen. HS | |
C0>| SysOp of NODE 3 BBS | The Flying HAm - BBS | |
C0>| Running OBV/2 Software | Technomage - BBS | |
C0>| | N3SQE/1 - HAm V |
C0>| | N3SQE@Nxxxx.FNxxxx.PA.USA.NA - Packet |

If you don;t know what the LO is then you might consider doing a lot
more reading before trying your hand at the 2.3 Ghz transverter
project. (It's NOT for the novice!)

L.O. is the Local Oscillator. The theory behind the transverter is
basically to mix the I.F (144 Mhz) with the L.O (2160 Mhz) to come up
with the R.F. (2304 Mhz)
I am assuming that you are referring to the WA8NLC 2304 Mhz "No Tune"
transverter design. This board requires an additional Local Oscillator
board (see section 5-1 of the ARRL UHF/Microwave projects manual).
"A Clean, Low-Cost Microwave Local Oscillator". This board provides
a 540 Mhz output which gets quadrupled on the transverter board by
a multiplier stage to 2160 Mhz.
You will need to get the L.O. board from DownEast Microwave if it is
indeed the WA8NLC 2.3 Ghz transverter that you are building. The L.O.
board is universal and can be used as the L.O. for many of the other
"No Tune" designs.

The only "No Tune" transverter that has an on-board L.O. is the 902 Mhz
version...all others requires the additional L.O. board.

Hope this helps...

The following is a QST

The Germans prepare to take a repeater into space, the FCC says
it will be getting smaller and a fifteen year old ham is honored
for his community service during the 1993 midwest floods. These

stories and more on Newsline report number 942 coming your way right now!

(*****
GERMAN REPEATER HEADED TO SPACE

A full blown open UHF FM voice repeater will soon be on the air from space! The Germans are putting it there. It's called Safex Two, and the first section of this repeater will be carried to the Russian MIR space station by German Cosmonaut Thomas Reiter, DF4TR. This, when he arrives on MIR for the European Space Agency's EUROMIR 95 mission that's scheduled to begin as this newscast goes to air. The rest of the system will be carried to MIR in the course of several missions over the next few months. The 70 centimeter space repeater, actually an FM transponder, was built by Thomas Kieselbach, DL2MDE. Initially it will be FM only with downlinks at 437.925, 437.950, and 437.975 MHz, and an uplinks in the lower part of the 435 MHz space communications subband. Safex Two will later be improved adding a 23 centimeter to 13 centimeter transponder, capable of broad bandwidth modes including fast scan ATV.
The German design team has not announced a date when the Safex Two orbital repeater will come on line, but using it will not be the same as using your favorite local machine. While it will give coverage over hundreds if not thousands of miles, you will need the plenty of power and ability to computer track the MIR space station with a beam antenna in order to use it. Alternatively, hams might consider setting up gateway repeaters, FM repeaters on any band tied to other repeaters with the ability to track the MIR. This, so that any ham with a handheld can enjoy the soon to be on the air repeater in space.
In the meantime, regular users of MIR can talk directly to DR4TR who will be on the air using the call sign DP0MIR on the normal 2 meter frequencies of Primary frequencies of 145.800, 145.550, and possibly 145.200 MHz. These frequencies were adopted as standard for MIR and SAREX shuttle activities at the IARU session of this year's AMSAT-UK Colloquium. QSLs for contacts with this mission will be handled via the usual German DARC QSL bureau.

(*****
FCC DOWNSIZES

The federal Communications Commission may downsize and close its monitoring stations. This could have a serious impact on Amateur Radio as we hear from Paul Courson WA3VJB in Washington:

The FCC may automate all nine of its monitoring stations across the country and run them by remote control from its facility near Washington. And personnel layoffs proposed by FCC Commissioner Reed Hunt would be another side affect of budget cutting in congress.

Hunt told the Washington Post, He sees a mandate from lawmakers to make the agency smaller. Hunt would fire 180 workers under the plan and close a dozen regional and field offices by this time next year.
If the downsizing is carried out, it would be the largest payroll reduction in the 51 year history of the FCC. But Hunt says even if the cuts in fact are carried out they might not last.

He said telecommunications rules are changing. And that more people will eventually be needed to oversee those changes. He said as many as 80 additional responsibilities could come from the Telecom Legislation recently past by the House and Senate. The bill has yet to become law. At the same time the House has proposed freezing the commissions budget for next year. No word yet what the Senate might do with the FCC's budget. The issue faces lawmakers when they return from the August recess.
But Hunt is acting on a worst case scenario in the meantime. He would close nine of twenty five local field offices responsible for resolving interference complaints. He would also close half the regional field offices of the FCC. Cutting Atlanta, Boston, and Seattle from the six the agency now has.
As for the monitoring stations, the FCC Commissioner believes all nine can be operated remotely by the agencies main tracking facility at Gilford, Maryland. That is about fifteen miles outside of Washington.
Hunt says he would preserve the enforcement workforce. While cutting jobs in public affairs and administration. The FCC in recent years has shied away from initial direct action on complaints in the amateur service. Directing reports instead to a volunteer core charged with building a case. It's not yet clear wether the FCC might distance further from many intervention disputes on the ham bands. Leaving it up to hams themselves to settle things or put up with problems.

Again, Chairman Hundt is talking about a worse case scenario. Only time will tell how far the downsizing will have to go.

(*****
OKLAHOMA HAMS PRAISED

Ham radio has received words of praise for its part in relief efforts following last springs terrorist bombing of the federal building in Oklahoma City. Oklahoma Senator Don Nickles has entered into the Congressional Record a tribute to volunteers who helped in the aftermath of the April bombing of the Murrah Federal Building in Oklahoma City, including Amateur Radio operators.
In his remarks, Nickles cites an outpouring of love, selfless effort, and resources. He says that the community is indebted to those volunteers who created a silver lining to the dark cloud of the tragedy.
Specifically Nickles says that Amateur Radio operators provided

an essential service to rescue operations. Within minutes of the attack, operators were on the scene providing an emergency communication network that allowed for the organization of supplies as well as firemen, policemen, and rescue crews from countless communities.
Their contribution of 360 hours of service, Nickles was says was made possible by donations from electronics companies such as the Oklahoma Community Communications Center.
Senator Nickles's remarks were published in the August 11th Congressional Record.

(*****
YHOTY '95

A fifteen year old from Alton, Illinois has been honored as the 1995 Newsline Young Ham of the Year. Adam Weyhaupt, N9MEZ, received the honors August 19th at the recent Huntsville Hamfest Banquet.
Adam was chosen for his many contributions to the community through the use of amateur radio. During the midwest floods for 1993, Adam who was thirteen at the time, was in charge of scheduling hams for round the clock emergency communications. He also handled net control duties for a local disaster net.
The following year, Adam served as a key communications organizer for the fifteen day U.S. Olympic Festival in St. Louis. And if that is not enough, Adam acts as a net manager for a local emergency service net. He is active in the local Skywarn Network and edits a regional Skywarn newsletter.

"The hobbies can be an important part of a young persons life. It gives them valuable life experiences and provides them the opportunity to meet a wide variety of people.
Ham radio is certainly a unique hobby, by these standards. It is one of the few hobbies where you can have a good time and yet help so many people. And while you should certainly have a good time, I strongly encourage all of you to use your communications talents to help other people in whatever you can do. Because that is what ham radio is really about.
Whatever you decide to do, just jump in with both feet and do the best job that you can do. And people will remember you, because you have done such a good job and you will be helping many people." Adam Weyhaupt, N9MEZ.

As part of his award, Adam received the Yaesu FT-840 HF rig and FP-800 power supply from corporate sponsor Yaesu, USA. Chip Margelli, K7JA pays tribute to Adams many accomplishments.

"We feel that leadership is important to amateur radio because frankly as we all know in radio clubs leaders are hard to find. Leaders get worn out. Leaders are asked to do too many things. And yet when we have leaders full of enthusiasm, with new ideas we think that is something that is good and should be encouraged."

K7JA

The Newsline Young Ham of the Year Award is sponsored jointly by Newsline, Yaesu USA and CQ Magazine.

By the way, the nominating period for the 1996 10th anniversary Young Ham of the Year award is now open. Nominating forms are available from Newsline for an S.A.S.E. or can be downloaded from the ham radio files area on Genie or America Online.

(*****
NEW ZEALAND YHOTY

The United States is not the only country that is honoring its young hams. New Zealand has a very active awards program for its younger radio amateurs.

For some years now NZART, the society representing radio amateurs in New Zealand has conducted awards recognizing youth achievement in amateur radio.
There are two youth awards made annually. An achievement award for the best amateur radio examination result obtained by a candidate under eighteen years old. And the Young Amateur of the Year Award. Awarded to an amateur under eighteen years of age who has demonstrated service to amateur radio in any one of a range of fields of achievement.
Now this years Young Amateur of the Year Award was made to eleven year old Pamela Blackert, ZL1WPB of North Shore in Auckland City. Recently I asked Pamela how it felt to be Young Amateur of the Year.

"It was very exciting and a big surprise and a great privilege to win the Young Amateur of the Year for 1995 at the annual conference." ZL1WPB

Well Pamela to the examination in September of 1994 while still at primary school and just ten years of age. She completed both her examination papers in just twenty two minutes. Tutored by her father Dave, ZL1AD, Pamela is the third generation of Blackerts to be licensed. Her Granddad was ZL2HD. Pamela attends local radio club meetings and participates in the amateur radio emergency organization. Within minutes of getting her callsign she was active on the New Zealand National HF system.
She was also in regular contact with MIR on voice and packet. She struck up a rapport with cosmonaut saying that she reminded him of his granddaughter.

Newsline congratulates both of these youngsters on their service to Amateur Radio and on their awards.

(*****
NEW VK 10 METER BAND REPEATER

Still in the South Pacific, VK5VB reports that Australia's Adelaide 10 meter repeater on 29.620 / 29.520 MHz is now operational. The repeater is located just South East of Adelaide and was constructed by VK5AH. Any QSL reports can be sent via packet to VK5VB@VK5LZ.

(*****
RSGB TO INAUGURATE SPECIAL MEMBER RATES

The Radio Society of Great Britain says that it has approved measures to reward long-standing members of the Society. When RSGB membership rates rise this fall, continuous members for 50 years or more will receive a 50% discount; 60-year continuous members will get a free ride for the rest of their lives. The RSGB also plans a new "Junior Membership" category. The RSGB, like its counterparts in other countries is raising membership rates as it faces rising costs of both paper and postage.

(*****
RSGB CON

And the RSGB International HF Convention will take place at Old Windsor in Berkshire on the 9th and 10th of September. The event will feature lectures and presentations from some of the world's top HF operators and DXers, including Roger Balister, G3KMA, who will give two presentations on the RSGB's Islands On The Air awards program.

(*****
RICHARD COTTON, W8DX, S.K.

Back in the United States, some sad news to report. Former FCC Detroit Field Office, engineer Richard Cotton, W8DX, has died. Cotton, 89, passed away on July 29th.
Richard Cotton was first licensed in the early 1920's, and held W8LEC before becoming W8DX. An active DXer, he was one of the first amateurs on the Oscar satellites and held satellite DXCC. A career veteran with the FCC he joined the Federal Radio Commission's Detroit office in the early 1930's. He was a government employee of the FRC and then the Federal Communications Commission continuously until retiring in 1971, finishing his career as engineer in charge.

(*****
ZIFF DAVIS AWARDS

Ziff-Davis Publishing has announced the 1995 winners of the Ziff-Davis Shareware Awards. This is an annual competition to recognizes the best in new or significantly upgraded PC shareware programs introduced during the previous year. The winners were honored at an awards ceremony Friday evening, June 23rd, during the Shareware Industry Conference in Scottsdale, Ariz.

(*****
DX-ET

In DX, word that Ethiopian station ET3AA frequents 14.224 MHz around 02:00 UTC. QSL him to Post Office Box 60258, Addis Ababa. On CW, look for ET3YU at the low end of 20 meters around 22:30 UTC. QSL this station via YU1FW.

(*****
HAPPY TOWER

And DXers with antenna problems will be happy to learn that not every tower is unwelcome. In fact, a tower raised to 100 feet over the small town of Wayland, Iowa, will benefit student hams at the town's school. The editor of Popular Communications Magazine has the details:

"The tower erected at the school late last month will support antennas for students who operate the schools amateur radio station, KB0SAL.
The tower was obtained from state surplus two years ago when it was taken out of service. The tower was erected near the Junior-Senior High Building in Wayland, Iowa and joins two other towers supporting antennas currently used by the school ham station.
Fred Haber, the schools Challenge Program coordinator planned and directed the project. Through the efforts of the Waco School District administrators and workers, permission was obtained to move the tower and its associated parts to the farm community of Wayland for use by the school ham station. With the new towers, student hams at the school will be able to broaden the access to the world in allowing them to meet and communicate with persons all over the world. Haber said a number of inter disciplinary projects involving students who are not hams also may be undertaken.
Haber cited that the benefit of having foreign language students communicate with Spanish speaking hams in Central and South America. Or having students enhance their geography lessons real world links to other states and countries. He also sees cooperative class projects in cultural studies, weather, soil and water resources.
The tower project actually became a community project in Wayland as residents with certain expertise helped with various stages of construction and the towns telephone company lent technical support from its staff. Adult hams from surrounding areas in Henry and Washington Counties pitched in as well as a half dozen student amateur operators.
In addition to benefiting the students the new tower will also benefit southeast Iowa hams. Packet will be digipeated off of the tower once the equipment is setup." Chuck Gysi, N2DUP

Chuck will have a complete wrap up on this story in an upcoming edition of Popular Communications Magazine.

ROSALIE WHITE JOINS YHOTY

Word that 1995 Radio Amateur of the Year, Rosalie White, WA1STO has accepted an invitation to help guide Newsline's Young Ham of the Year Awards program into the next century.
As most of you are aware, Rosalie is the manager of the ARRL's Educational Activities Department where one of her duties is to coordinates the leagues' continuing education workshops held at conventions around the country. WA1STO is also a member of the SAREX Working Group and in both positions she works very closely with the educational community.
Rosalie White joins Rich Moseson, NW2L of CQ Magazine, Capt. Larry Zettwoch, KR4IF of US Air, Keith Glispie, WA6TFD, of Fox Television and Bill Pasternak, WA6ITF, of Newsline in serving on the Young Ham of the Year Awards Steering Committee.

4025. New Ham Radio Test Simulators - Mac

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-03 00:00:00 UTC
From: john@wd1v.MV.COM
Message-ID: <john-0309950821480001@wd1v.mv.com>
Source record: 239279
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

FREE - NEW Macintosh HAM TEST SIMULATORS

Studying for a ham test and have access to an Mac?

Upgrade Fast! Simulate the test and get S T I M U L A T E D!

Scores of 90% or > even get applause!

The new Macintosh Ham Test Simulators are HERE (and there if you can FTP)!

o Novice Ham Test 5.0 SA.sea
o Technician Ham Test 5.0 SA.sea
o General Ham Test 5.0 SA.sea
o Advanced Ham Test 5.1 SA.sea
o Extra Ham Test 5.0 SA.sea

The latest version "5" feature:

HyperCard 2.3 as a stand-alone application (SA) eliminating
your need to have HyperCard. All you need is a Mac with 4
Meg of memory and version System 7 or greater.

Each version "5" Ham Test Simulator has the latest questions
as prepared by the Question Pool Committee.

Each version "5" Ham Test Simulator is FREE OF CHARGE and work the
same way as the originals did (written by Diana, KC1SP).

You may obtain a version "5" Ham Test Simulator by mailing me a *FORMATTED
disk (1 per test) and include a Self Addressed and Stamped disk mailer for
the return.

Each version "5" Ham Test Simulator is also bundled with a shareware CW
program called MacMorse 1.4 written by Doug, WB0EON.

Also included in the version "5" collection are text files that relate an
interesting variety of ideas about the best way to study CW and prepare
for tests.

Or warm your phone line and get JUST the tests:

America On Line - Macintosh Ham Radio Section

or:

ftp://oak.oakland.edu//pub3/hamradio/mac/theory-and-morse/AdvancedHamTest.sea.bin
(Aug 30th)
ftp://oak.oakland.edu//pub3/hamradio/mac/theory-and-morse/ExtraHamTest.sea.bin

ftp://oak.oakland.edu//pub3/hamradio/mac/theory-and-morse/GeneralHamTest.sea.bin
ftp://oak.oakland.edu//pub3/hamradio/mac/theory-and-morse/NoviceHamTest.sea.bin
ftp://oak.oakland.edu//pub3/hamradio/mac/theory-and-morse/TechnicianHamTest.sea.bin

Your comments and suggestions for future versions are always welcome. Stay
in touch
and good luck with YOUR next test!

>Ah weel, Zack... in the final analysis, I go by common amateur usage,
>whether the pedants like it or not! The dictionary helps a lot too.
>Variation is in the ear of the beholder!

I know this is useless, but there's nothing "pedantic" about insisting
on correct vocabulary in a technical discipline. Apparently, Brian,
you mistakenly believe that "variation" of a carrier can not include
turning the carrier on and off. This is your technical mistake;
keep in mind *any* variation of a carrier, including switching it
on and off, is indeed modulation.

Your social mistake is your apparent inability to admit a technical
error and learn. Furthermore, you go on to berate anyone who does not
agree with you, declaring them full of "horse poop" and "pedants".

I'm not rude or arrogant to point out your errors; I'm just stating
objective fact: CW, as defined by the ITU and FCC, involves modulating
the amplitude of a carrier with digital information. Please stop
trying to confuse those who are still learning.

4028. Extremely poor behavior (was Re: Does this ham hate Jews or not?)

4029. Airphones

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-04 00:00:00 UTC
From: ibx@Cs.NOtt.AC.UK
Message-ID: <199509040820.BAA28064@UCSD.EDU>
Source record: 239189

Having followed the debate about airlines and cellphones I thought I'd offer the following item that I found in one of the ham radio magazines over here in the UK.

Airphones apparently do not (says this magazine) use the usual terrestrial frequencies. They use 1650MHz and 1800MHz and I guess the reasons for this wil be obvious to anyone who has followed the debate so far.

I assume, of course, that these frequencies are a world-wide standard and not just for Europe - I could be wrong in this assumption.

Regards,
73, Ian G4EAN @ GB7BAD or ibx @ cs.nott.ac.uk

4030. Wayne Green

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-04 00:00:00 UTC
From: broehrig@admin.AUrora.EDU
Message-ID: <Pine.3.89.9509041308.B17121-0100000@admin.aurora.edu>
Source record: 239190

This is in response to ssampson@ICON.net who was talking about 73 magazine and Wayne Green.

I don't know what kind of shape they are in financially. To listen to Wayne, whoever was running the place for a while ran it into the ground.

Last year I wrote a series of three articles that appeared in the Jan-Mar issues. I got the usual standard "contract" that said I would be paid so much for them during the month of publication.

By the time June rolled around I still had not seen any $$ from them so I started making calls. The result was nil so I decided to go to small claims court and sue Wayne Green, inc. Well, I found out that the corporation no longer exsisted (note that the "company" was still being called Wayne Green, inc).

So I sued Wayne personally. The deputy had a real hard time serving the summons. For one reason, Wayne moved to Mass. and the deputy had to try and catch him at work, which she finally did after 10pm one night.

Anyway, the day before court, I get a check from Wayne at 5pm.

I went to court anyway to get a judgement for the court costs, which I was granted. I sent a copy of the judgement with a letter to Wayne and eventually got a check for the court costs, so I finally got all I was due.

I had written for 73 previously and never had a problem. This experience soured me and I have since let my subscription drop even though I did like the magazine.

I guess the thing that really gripes me is that he could have explained what happened and sent an apology or something. Still no excuse for not honoring a contract, however. SO I will no longer support 73 and hope that others that have been burned by Wayne feel the same way. I know there are others that have had problems with 73 - I have talked with them.

So if you have any thoughts about submitting articles to 73, you better think again.

Bob, K9EUI

What interest do you have? It's a specialty here. Small DF units
exist, it's primarily a price-performance issue.

...and the Russians, in WWII, killed, what, 20 million of their own people? How many people has the US killed in its wars? How about China? Japan? The UK? Let's don't forget about the Italians or the French, either.

Your entire premise is idiotic. If the subject is (as the subject line indicates) racist Germans, then "tens of millions" isn't even remotely accurate--the number is closer to 6 million. Still, of course, unexcusable, but a far cry from 20+ million. There were not, before or after that incident, any state-sponsored racial elimination programs.

In this regard, Germany is little different than any other country--all countries have wars (except, perhaps, for the Swiss), and lots of people are killed in all of them. Some of the wars don't even have any real purpose--witness Viet Nam.

One of the express purposes of the Amateur Radio Service is to foster international goodwill. How will your anti-Germanic crap accomplish this?

Hi Dave, In the greater Boston area, you can get helpful
traffic and weather information on the Waltham Repeater, 146.640 MHz
(-), especially during the morning and evening communting hours.
The Boston Repeater, 145.230 MHz (-), has wide area coverage.
On Monday nights at 9:00 PM (2100 Hrs), the Boston Repeater has a
scheduled net for ALL hams within hearing distance. Hope to hear you on
the air.
Wish you a good trip and happy repeater ragchewing while here.

Have you inquired of S-Com if they have a source? I know the owner and one of
the primary engineers, and I'd expect Bob would be happy to point you to a
source.

There are numerous installations in the northern Colorado area, and I believe
they all tend to use remote upload programming capability to update some of
the features - such as ID, macros, etc.

Give Bob a call at S-Com.

4042. Need Windows Propagation Software

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-04 00:00:00 UTC
From: davidj@nauticom.net
Message-ID: <DED2xD.Lq4@pgh.nauticom.net>
Source record: 239289

Does anyone know of any Windows based propagation software out there. I have the DOS based stuff. Looking for Windows specific.

Thanks,

Dave

4043. Re: Best Ham Mag? 73 of course!

Bannold Communications Limited is proud to announce its arrival on INTERNET.

Staff at Bannold can be contacted by mailing "persons name"@bannold.com.
i.e. mick@bannold.com

WHO THE HELL ARE BANNOLD COMMUNICATIONS
and
WHY SHOULD YOU WANT TO CONTACT THEM?

Well, as Trio-Kenwood (UK)'s ONLY OFFICIAL EXPORT DISTRIBUTOR and with a higher turnover of KENWOOD product than any other Kenwood UK dealer, Bannold Communications is in the enviable position of being able to take advantage of volume discounts and offer TRADE PRICES to the General public.

OK Big Deal so you're cheap, but what about support?

Bannold Communications offer the same level of support as any other Kenwood distributor, Bannold
Communications provide full warranty backed by Trio-Kenwood (UK). Warranty claims are handled by
Bannold Communications, on their own premises by fully trained engineering staff with calibrated
test equipment.

Can you pop in for a cup of tea and a chat?

Bannold Communications are Primarily distributors, they move equipment in bulk to destinations
all over the world. The operation is geared to supplying communications solutions to the professional market. There are no Licensed Amateur's on the staff, there are no hospitality facilities.

Bannold Communications are fully authorised to sell and maintain Kenwood Communications equipment, they will advise on official modifications, updates and Official Kenwood engineering
bulletins.

Buying from Bannold means you get what you pay for, No cups of tea, No high street shops, No
hype, lies or exaggerations. You simply get the BEST products at the Keenest prices with FULL
warranty.

We are not trying to entice you away from your local supplier, I doubt that we could !
Its always better to buy from someone you know and trust, especially if they can discuss you
special needs over a hot cuppa.

BUT

If you are thinking of buying that rig on special offer in the mag, or you don't have a good
local dealer then don't think twice and try us were sure you'll get a
better deal.

What do you think of the following message I received?

Date: Sun, 03 Sep 1995 21:55:54 -0400
To: k1oik@ccsnet.com
From: Ruthie Cunliffe <ruthie@eznet.net>
Subject: ham??

Dear Burt,

Your bizzare ramblings in the misc ham newsgroup have been rather entertaining.

I'm curious as to why you bother keeping your ham radio license if you think all hams are rotten to the core?

I'm also wondering if you are the least bit aware that if it hadn't been for Jews in the first place, Hitler wouldn't have had any reason to go on a rampage and possibly that would have spared the lives of many Germans, Italians, Poles, Russians and many other ethnic groups? Should we hate ALL JEWS for even exsisting because if they hadn't possibly my relative would ...have been spared rather than put to death (not a Jew, a German who was ill and was encarcerated and put to death during WWII)?? Thankfully I do not live in the past nor do I carry hate and unforgiveness in my heart and soul. My life is much better because I don't. Try it, you might like it.

A couple points I thought about making in the newsgroup but since I am not one to regularly frequent that newsgroup and also don't wish to embarass you

in public (you're doing that just fine all by yourself) I choose to make these points in email:

YOU did not live through World War II. YOU did not spend time in a concentration camp. YOU haven't a clue what the word NAZI means. YOU don't have much reason to be proud of your heritage as an American now do you??? How many Native Americans were slaughtered by Americans? How many Africans and other ethnic peoples were tortured and died due to being enslaved by AMERICANS??? How many people died due to the AMERICANS using nuclear warfare?? How many Jews, Germans and others died during WWII during the intentional fire bombing of cities such as Dresden???

You should think about some of these things before you open your fat mouth. If you're babbling in the newsgroup is just for entertainment then keep at it and anyone who is not a ham and happens into that newsgroup will possibly think that all hams are like you. But if they stick around awhile they'll realize that you're nothing but a bag of wind with little if no intelligence behind what you say. Oh..and the .gif file idea was a real scream!!

My sympathies, Burt, if you're doing this for more than
entertainment....your life must be really empty and full of hate.

CUL, Ruthie

>have any real purpose--witness Viet Nam.

Germany started two world wars that killed millions, no other country
caused MORE world wide grief in history. America had a very valid purpose in
Vietnam. To stop communism. We screwed it up but our ideal was correct.

> One of the express purposes of the Amateur Radio Service is to foster
>international goodwill. How will your anti-Germanic crap accomplish
>this?

My "crap" is a response to what Germany has wrought upon the world.
I bet if child molesters had their own pacific Island (not a bad idea) you would
want to work them to get another "country."

Guy, I'm not real familiar with the capabilities of the Icom 22S, but
I believe it is a diode matrix programmable radio. This means you
solder a series of diodes in a matrix board to program the frequencies
that you want stored in the radio. This radio later came out as a
22U, which was pushbutton (BCD) programmable. The limitation, if I
remember correctly is that it is not set up for the current 2 meter
band plan. It will work on some repeaters, but not all of them. If
you are wanting to use it on simplex for packet, I would think it
would perform fine, although I am not familiar with its speed to
switch from tx to rx. Since it is an older radio, it may not be too
fast. The diodes needed to program the radio are readily available
and inexpensive. As far as price, I would not value it too high. I
hope this helped a little...73's Floyd WD5ENJ

4051. 900 mhz Repeater

ITU regulations are not writ in stone, any competent WARC can change them, or any administration may take exception to them by adding a footnote, as the Japanese did. The New Zealand administration is committed to deleting that section of Article 32 at the next competent WARC. Whether they will succeed or not is in doubt, but momentum is shifting to their view. It's just a matter of time. Even our new ARRL president says it's likely only a matter of a decade or so. Events often move swiftly once the seed is planted, witness the collapse of the Soviet bloc, or the ARRL turnaround on the code test free Tech. Much can happen in a decade.

>communications, it may also mean that we need to use CW. It is a
>reserve skill that all amateurs that operate on the HF bands must have.
>They must also pass the appropriate CW test to get their license.

Lots of "musts" in that paragraph. Can you justify those "musts",
rather than substituting perhaps the word "should", or inserting
the phrase "or something equivalent or superior"? (There *are*
better methods, you know.)

>I am in favor of a graduated code test as you advance in license class.
>For instance, Novice and Tech Plus - 5 WPM, General - 10 WPM, Advanced
>- 15 WPM and Extra - 20 WPM.

If Morse speed is important, how can you justify allowing people on
the air with less than 20 WPM? If code speed is *vital*, a "must"
as you noted in your first paragraph, then why allow lesser mortals
on the air with a lower speed, or no speed as is the case for Tech?
Either it's something the government should require, or it isn't.
Just as you can't be "a little bit pregnant", a government mandate
should be uniform, or it's not justifiable at all. There's no
qualitative difference in the privileges of a General and an Extra,
just a small quantitative difference in subbands. Which is the
necessary and sufficient test speed? Is it 13 or is it 20? Or
perhaps it's 5, or 0, where do you make the distinction between
"must" and "it would be nice if"? And what's the government doing
involving itself in "it would be nice if" anyway?

From: brian.carling@acenet.com

Samuel, you apparently don't know what you are talking about.
For example:

SS> I wouldn't hurt my feelings a bit to see code go out. I saw the
SS>posting where one person said that amature radio is incentive based and
SS>all of that. Well has it ever occured to anyone that all of these
SS>levels and beurocracy is why amature radio has gone dramaticly down in
SS>popularity?

Oh really? The AMATEUR (note spelling please) population has gone from
250,000 to 750,000 in the last 5 or 6 years and YOU claim that it has
"gone dramatically down!"

I think you better find out more about this matter before you weigh in
with your erroneous opinions!

SS>I say if you want to do packet, have test and training
SS>devoted to packet only and tv, etc. If HAMs cling on to the past,
SS>amature radio will become a thing of the past.

How would you know seeing that you haven't even got started yet?

SS> Also why the devil should we keep code when technology has made it
SS>obsolete? Even in third world countries they have voice
SS>communications?

So what? There are still literally MILLIONS of hams in ALL countries
using the code EVERY day and having a ball! It sounds like you have a
bad case of "sour grapes" to me. You can't reach the grapes yourself,
so you declare them to be sour!

SS> If someone has a firm argument for code besides the argument that
SS>it is an "initiation right" please tell it to me. Remember this isn't
SS>a club, this used to be the way years ago people kept in contact with
SS>each other. And why should I pay out my money for an initiation right?

And why should WE allow you a radio license when you can't even bother
to learn how to use one?

SS> Like it or not, but we in the younger generation will eventually
SS>get rid of code.

Ask a teenager for help while they still know everything!

>80,000 ?!.....80,000 ?!.............closer to 25% of that would be

what's quoted in the circulation figures for the mag that get printed in there every so often? and didn't 73 start being checked by the Audit Bureau of Circulation a while back (don't know if they're lackeys for the mags or not but its an attempt to independantly check circulation figures..).

in any case, the number of hams is much greater than the total circulation of all the major rags (qst, 73, cq) and wannabes (worldradio, qex, comm qtrly, NCJ, etc.) combined. that's what's wrong with this picture.

yeah, i'm tired of seeing the j-pole of the month story in 73, but then again, there's a lot of new guys out there and for them it could be something completely unheard of to them. of course, this month was the antenna issue i think - also the 35th anniversary too...

i dunno if 73 would survive the loss of wayne...and i don't know if wayne's even thought that far ahead.

>controlled. I am interested in making the club an offer on this rig
>based on a few considerations.

Hi Guy, The IC22S is synthesized, covers 146-148 MHz in 15 kHz spacing, and has 22 diode programmable channels. If it's in good working order, it is worth about $50 which is what I paid for three of them at hamfests. They can be turned into 5 kHz spacing and unlocked to cover more of the band. TechnoLogic Concepts, tlcdhconsult@delphi.com, has a kit for this purpose.

The IC22A and IC22U are crystal controlled with 15 kHz spacing. In an area with 20 kHz repeater spacing, this means these rigs will work with only 1/3 of the repeaters between 146 and 148 MHz.

I revive old IC22S's, set them up to cover all except the lower six repeaters, and give them away to struggling young hams. Anybody who has one that doesn't work and would like to contribute it to a worthy cause, let me know.

Don, You said that there is no homebrewing anymore and lament that fact. In the same breath you say you don't care about antennas.....don, don't you feel that antennas and building,designing them is ok subject matter? Homebrewing a rotable rhombic (just a dream of mine) or massive curtain....that is about the last type of homebrewing most hams today know. (if any)
When I get on the air and talk to a unresponsive ham on the air he or she is usually new and it might take some very familar subject like "antennas" to get a decent qso going and to help break the ice. 73 don and don't speed through Cleburne Co. Al. on I-20, they are waiting.

>Vietnam. To stop communism. We screwed it up but our ideal was correct.

No other country? You're stretching a bit there. France under
Napoleon certainly caused plenty of grief. It would be wise to
remember that Germany wasn't alone in starting those wars,
either--Japan gave plenty of help in getting WWII off the ground, and
Austria's where WWI started.

Elementary history will indicate that the French are _at least_ as
much to blame for WWII as the Germans, by insisting on impossible
terms for the Treaty of Versailles (sp?), which directly led to
Hitler's rise to power. Or, you could also blame England, who refused
to act in response to Hitler's invasion of Poland, when doing so would
have ended the war 6 years earlier. The Germans initiated
hostilities, but there's plenty of blame to go around. Let's don't
forget America's love of isolationism...

You're also continuing to ignore the fact that all the people
responsible for WWI, and the vast majority of those responsible for
WWII, are dead.

Have you met any Germans in, say, the last 10 years? My experience
has been that they're far less racist than most Americans.

Got a Motorola Mostar moble radio at yard sale, It is set on 152 mhz simplex.

Would like any info on changing freq to 2 metters and the pin out on the 15 pin plug on back of radio.

Thanks.

>not a true HF operator*, etc)

Warren, even if you do suffer from this, and severe cases are probably
extremely rare, though those with a lousy sense of rhythm are rather
common, you likely can overcome it. You'll never be a virtuoso, but
the metronome ticks for those who can't naturally keep time. Dots and
dashes may seem to sound alike to you, but complete letter patterns
probably do not. Don't try to overthink this. Just listen for the
letter sounds, not the individual elements of the letter. Let the
subconscious do it, don't try to reason it out element by element.
That way just leads to frustration. Drill, drill, drill while trying
to blank your conscious mind to the sound elements. Concentrate on
identifying the overall gestalt sound pattern. The brain is good
at matching patterns, let it do it.

Listen particularly to the inverse patterns, A and N, G and W,
F and L. Try to tell them apart by the total character sound.
Save letters like E and T, O and S, etc, until later when
the subconscious has gotten the hang of listening to the character
patterns. This is backward from the normal order of conditioning
the letter sounds, but it should help in your case.

Don't get discouraged if you backslide from one drill session to
another. This is natural and happens to everyone. Just keep at it.
Don't think about letters you missed, concentrate on the next letter
sound. It takes time to burn the patterns into the neural nets,
and they'll fault from time to time as you introduce more letter
sounds. Don't worry about it. The subconscious will sort it out
eventually. If you're a naturally competitive person, don't keep
score, that'll drive you crazy too. Just copy what you can and

forget about what you miss. Repetition is the key, not score on
any given session.

I'm in the market to get a new car and have been looking at
the 95 Nissan Pathfinder, I have a FT 5100 dual band mobile
which I'm going to install in whatever car I finally get.
You can guess whats a major factor in selecting my new car!

Has anyone suggestions on where the rig can be place for
convienent use by the driver and what to watch for (50Watts
frying the car computer etc) ?

My wife took the passed the Novice written test a week ago and then the Technician written test yesterday. The VE told her that her callsign should already be available by the 800 number since she had passed the earlier element. That doesn't seem right to me, but I'd like to check. Anyone have that number handy? I did check on one of the callsign servers that is updated daily and did not find it there. Was the VE mistaken? Thanks for any help.

>Does your bike have a battery to excite the stator coils of the alternator,
>or does it depend on residual magnetism to get it started?

No battery. With my VOM attached, the needle fluctuates about zero on
the DC setting, while on AC I get a 6V reading. Some day I might just
dismantle one to see how it works.

They're manufactured in France with a trade name of Oubite.

Wonder if anyone can confirm/deny rumors heard on bands regarding the new TS-870 having Digital Signal Processing in the IF stages,rather than simply in the audio section? Also heard that the official announcement will be made by KWD on 9/15. From what I can tell, the new FT100MP does NOT have IF DSP, and this could be a profound innovation by KWD. Also any info on price, availability, etc., would be appreciated.

> Even Kohl recently called Germany the "mother land"---sound familar?

For them, Germany is the "Father Land". For Spaniards, Spain is the
Mother Land. Is a matter of language use, not racism. Citizens of
the US call themselves Americans, but their population is only a
fraction of the population of the Americas, if you are in for a
semantic war.

Your generalizations about Germans being racist are absurd. Only a
segment of the population display racism (remember Mark Fuhrman here).
As an example of german openness, there is nothing like Prop. 187
in Berlin, in spite of having more than 10% of the population made
of foreigners, many illegal.

I was a visiting foreigner in Berlin, and I found 1000 hospitable
Germans for each racist one. I also noticed that they seldom hold
positions of power, unlike people like Pete Wilson do here.

It seems to me that you still hate Germans for WW2. In that case, you
should also feel guilty about how blacks were treated here in those days,
and perhaps boycott japanese goods for the atrocities that they
committed in China during WW2.

Regards,

Message-ID: <42fpah$rv3@blackice.winternet.com>
Source record: 239324

ITS YOUR FAMILY AND YOUR COMMUNITY,
WON'T YOU HELP US TO BETTER SERVE THEM IN A CRISIS.

After a large disaster strikes your community and your family, I am sure you will agree that its a little late to start building a massive rapid response, emergency communications system supported by thousands of people within companies, organizations and serving as volunteers to provide essential support services.

We are The North American Center For Emergency Communications Inc. (NACEC), a Federally registered Non-profit organization serving North America since 1992. We have been developing a system that merges many different technologies to create a unique, high capacity, rapidly deployable solution to the problem of communications outages and shortages that occur following a large disaster. Our volunteer network in using the Internet as its communications backbone, is itself using one of the many technologies employed in NACEC's overall solution.

To help ensure the greatest possible effectiveness in as many communities as possible throughout North America, we are developing a very large volunteer network of community volunteers (Community Ambassadors) who work with our staff and their local communities. If you are community active and are interested in helping, we need your help, NOW. Please, don't wait until disaster strikes, help us to be prepared and be ready to assist your community.

BECOME PART OF THE SOLUTION!

The more communities that are represented by our volunteer network, the more effective we can be in disaster preparedness, emergency operations and in the area of emergency and military family message handling and delivery.

As a NACEC volunteer (Community Ambassador) you will assist with the movement of information that is vital to the continued success and growth of this organization and the survivability of your family and your community following a large disaster.

This project is growing rapidly, as we locate and add new dedicated volunteers from as many communities as possible from across North America. I hope you will join us in making this organization a success.

To find out more about how you can get involved in this project and use your Internet skills to help your community, please review the information that is in our WWW Homepage area which can be found at:

http://www.winternet.com/~nacec/index.html

An electronic volunteer application form can also be found there as well. Should you have any questions, please address them to me at: eaddy@nacec.org

Respectfully,

Mr. Edward Addy
Executive Director

The VE is correct only if your wife sucessfully passed a 5 WPM code test on or before the time she took her novice test. No license is given for passing only a novice written exam. With the passing of the Technician written test she now qualifies for a license and you can start checking with the FCC's call book server within three days after the test session. One examinee I new received his call sign the tuesday following a Saturday test session. Things have changed quite a bit since I received my license, I waited 6 weeks for my Novice and 28 weeks for my Advanced

Salut
well I did not see your infos on the rec.radio.swap
Mayby you are talking about the hamcom30 prg, this is why I send you this message.
The prg is not working on my system, all others prg working with the 741 interface
work find (jvfax)etc.
My system is 486 dx2 66 video ATI Winturbo 4Vram Mach64 with vesa 1.2, it's looking
like there is a problem with the card, but not shure, also I try the ezscan sstv on
the system, and no luke it's not working also.
Those prg are the only 2 prg that not work with my system.
If you have a idea I will be glad to know

My HAM club at work is cleaning out the shack to generate money for new gear. We have an old ICOM IC22S 2 meter transceiver that is crystal controlled. I am interested in making the club an offer on this rig based on a few considerations.

1) Can this old crystal controlled transceiver be used as a dedicated packet radio with my KAM all mode?

2) Are the crystals for this radio easily obtained?

3) What would be a fair price to offer for this radio?

If anyone can answer these questions or is familiar with this radio I would appreciate all responses. Thanks and 73's de KC5CWS Guy Jackson

Of the "total ham population" about half don't have an operating station on
the air. So, of the active hams the ARRL does quite well! The percentages
of ARRL/total hams, is a bit better than just about all of the ham orgs in
G-DL-VK-ZL- etc.

* = New data. T index may have changed.
^ = IPS predicted T index

The IPS Monthly T-index is derived from the observed monthly median values
of foF2 for each hour at up to 40 ionospheric stations worldwide.
These records become available from IPS stations in Australia very soon after
each month, but the majority are received up to one year later.
This means that the exact observed value of the monthly T-index is not
available until some months later.

The predicted smoothed monthly T-indices are computed by using a statistical
analysis of the observed monthly T-indices for all solar cycles since 1938.
The IPS T-indices may not be updated each month but only when sufficient new
data becomes available.

>Since no equipment manufactereres make anything for 900 mhz amateur
>service, would any of the 900 mhz cordless units adapt? Any other
>ideas on using this spectrum?

Be careful making generalities about no ham equipment being made for 900 MHz. ATV transmitters and recievers are being made by PC Electronics here in the US for the 900 MHz (and other) ham bands. I'm sure there are other equip. manufacturers I don't know about. Why the band is slow to catch on is, I think, 3 fold.

1. We are on the band on a secondary basis. Licenced commercial activity can take priority.

2. Even though part 15 users (non-licenced commercial) must not interfere with licenced activity (amateur or commercial), they are becoming more and more plentiful with wireless modems and LAN systems being developed all the time for this band. Try tracking one of them down and letting them know they put a little hash on your picture screen of your buddy's face coming from his shack on the other side of town. Even though you're right, you'll have a tough time convincing the management of a company of that fact.

3. As commercial activity picks up, we could loose the band altogether if enough powers that be decide we are a non-revenue generating nucence there. (Hey, it's happened before.) Then your 900 MHz equipment investment just got REAL expensive as the usefull life of it gets cut short with no market to re-sell it into.

I'll probably get some flak on the above statements, but it is MY opinion why 900 MHz is not supported better by either hams or manufacturers. --Mike KD6PKJ

>Any and all suggestions will be greatly appreciated.

Ok, you've got two issues here. The "leaky ground" PTT of the
headset requires you to isolate mic audio from PTT for the HF
rig. So whatever sensing circuit you use shouldn't load the
mic audio. A couple of ideas come to mind immediately. I'd
wire the mic tip to be part of a voltage divider, IE use a
4k to the 8 volts supplied by the radio and join that to the
mic tip. Now the leaky PTT is going to change from 4k to ground
to 1k to ground when PTT is active, and the voltage at the tip
is going to go from 4 volts to about 2 volts when PTT is active.

Let that drive a cascade of two Schmidt trigger CMOS open
collector inverters (4 to a package so no space penalty)
through a series 10k resistor and use the output of the
second inverter to drive the HF rig PTT. The series resistor
will prevent loading of the mic audio, which you can take
off the plug tip with a 2 uf capacitor. The open collector
inverter should be able to key the HF rig directly.

The second idea is similar to the first except using an opamp wired as a voltage comparator in place of the two Schmidt trigger inverters. A third approach would use a darlington transistor pair bridged across the 4k mentioned above, biased so that the increased current draw during PTT active would turn on the darlington, similar to an overcurrent detector in a power supply. You could wire up the opamp the same way if you preferred. In fact it would be a less finicky circuit. Since the opamp would be running open loop, it should easily be able to drive the PTT directly, or you could drive a reed relay with the opamp output if you felt the need to isolate the HF rig PTT and just supply a dry pair closure.

The only problem will be keeping stray RF from getting to your sense amplifier and latching up the HF rig in transmit. Good shielding and some ferrite beads should handle that.

Of course you *could* just go into the RS VOX and break out PTT separately before the internal pullup resistor, and wire it to a stereo plug, but that would keep it from also working on your HT without an adaptor. That might be acceptable, however, and would make the problem really simple.

Gary

Yeah, I understand what you say. Back in the late '60s, early '70s, I authored a microwave column for Wayne. Six months without payment and I said to hell with it. But over the years I've authored two or three feature articles and got paid right on time. It seems you get paid by the phase of the moon, alphabetically by height, or who is leading the National League West. Can't explain it, don't understand it, and it seems the construction articles worth a damn have become few and far between. Maybe some of the better authors have said what you said -- dunno what the truth is.

Best wishes and all that

5 september 1995

there are some commercial sellers of wireless telephones in the philippines (my home country) who claim that their phones can go as far as 60 miles from the base station.

one name brand is "senao" and it is made in taiwan.

the frequencies it operates on varies on the model, among them are:

49-54 mhz, 75-115 mhz, 212-330 mhz, 800-900mhz.

i would like to know if anyone in the us is selling these. i would like to bring them back to my home country. i am almost sure that the price is much lower here.

tnx and 73's.

The following is a QST

The Germans prepare to take a repeater into space, the FCC says it will be getting smaller and a fifteen year old ham is honored for his community service during the 1993 midwest floods. These stories and more on Newsline report number 942 coming your way right now!

(*****
GERMAN REPEATER HEADED TO SPACE

A full blown open UHF FM voice repeater will soon be on the air from space! The Germans are putting it there. It's called Safex Two, and the first section of this repeater will be carried to the Russian MIR space station by German Cosmonaut Thomas Reiter, DF4TR. This, when he arrives on MIR for the European Space Agency's EUROMIR 95 mission that's scheduled to begin as this newscast goes to air. The rest of the system will be carried to MIR in the course of several missions over the next few months. The 70 centimeter space repeater, actually an FM transponder, was built by Thomas Kieselbach, DL2MDE. Initially it will be FM only with downlinks at 437.925, 437.950, and 437.975 MHz, and an uplinks in the lower part of the 435 MHz space communications subband. Safex Two will later be improved adding a 23 centimeter to 13 centimeter transponder, capable of broad bandwidth modes including fast scan ATV.
The German design team has not announced a date when the Safex Two orbital repeater will come on line, but using it will not be the same as using your favorite local machine. While it will give coverage over hundreds if not thousands of miles, you will need the plenty of power and ability to computer track the MIR space station with a beam antenna in order to use it. Alternatively, hams might consider setting up gateway repeaters, FM repeaters on any band tied to other repeaters with the ability to track the MIR. This, so that any ham with a handheld can enjoy the soon to be on the air repeater in space.
In the meantime, regular users of MIR can talk directly to DR4TR who will be on the air using the call sign DP0MIR on the normal 2 meter frequencies of Primary frequencies of 145.800, 145.550, and possibly 145.200 MHz. These frequencies were adopted as standard for MIR and SAREX shuttle activities at the IARU session of this year's AMSAT-UK Colloquium. QSLs for contacts with this mission will be handled via the usual German DARC QSL bureau.

(*****
FCC DOWNSIZES

The federal Communications Commission may downsize and close its monitoring stations. This could have a serious impact on Amateur Radio as we hear from Paul Courson WA3VJB in Washington:

The FCC may automate all nine of its monitoring stations across the country and run them by remote control from its facility near Washington. And personnel layoffs proposed by FCC Commissioner Reed Hunt would be another side affect of budget cutting in congress.
Hunt told the Washington Post, He sees a mandate from lawmakers to make the agency smaller. Hunt would fire 180 workers under the plan and close a dozen regional and field offices by this time next year.
If the downsizing is carried out, it would be the largest payroll reduction in the 51 year history of the FCC. But Hunt says even if the cuts in fact are carried out they might not last.

He said telecommunications rules are changing. And that more people will eventually be needed to oversee those changes. He said as many as 80 additional responsibilities could come from the Telecom Legislation recently past by the House and Senate. The bill has yet to become law. At the same time the House has proposed freezing the commissions budget for next year. No word yet what the Senate might do with the FCC's budget. The issue faces lawmakers when they return from the August recess.
But Hunt is acting on a worst case scenario in the meantime. He would close nine of twenty five local field offices responsible for resolving interference complaints. He would also close half the regional field offices of the FCC. Cutting Atlanta, Boston, and Seattle from the six the agency now has.
As for the monitoring stations, the FCC Commissioner believes all nine can be operated remotely by the agencies main tracking facility at Gilford, Maryland. That is about fifteen miles outside of Washington.
Hunt says he would preserve the enforcement workforce. While cutting jobs in public affairs and administration. The FCC in recent years has shied away from initial direct action on complaints in the amateur service. Directing reports instead to a volunteer core charged with building a case. It's not yet clear wether the FCC might distance further from many intervention disputes on the ham bands. Leaving it up to hams themselves to settle things or put up with problems.

Again, Chairman Hundt is talking about a worse case scenario. Only time will tell how far the downsizing will have to go.

(*****
OKLAHOMA HAMS PRAISED

Ham radio has received words of praise for its part in relief efforts following last springs terrorist bombing of the federal building in Oklahoma City. Oklahoma Senator Don Nickles has entered into the Congressional Record a tribute to volunteers who helped in the aftermath of the April bombing of the Murrah Federal Building in Oklahoma City, including Amateur Radio operators.
In his remarks, Nickles cites an outpouring of love, selfless effort, and resources. He says that the community is indebted to those volunteers who created a silver lining to the dark cloud of the tragedy.
Specifically Nickles says that Amateur Radio operators provided an essential service to rescue operations. Within minutes of the attack, operators were on the scene providing an emergency communication network that allowed for the organization of supplies as well as firemen, policemen, and rescue crews from countless communities.
Their contribution of 360 hours of service, Nickles was says was made possible by donations from electronics companies such as the Oklahoma Community Communications Center.
Senator Nickles's remarks were published in the August 11th Congressional Record.

(*****
YHOTY '95

A fifteen year old from Alton, Illinois has been honored as the 1995 Newsline Young Ham of the Year. Adam Weyhaupt, N9MEZ, received the honors August 19th at the recent Huntsville Hamfest Banquet.
Adam was chosen for his many contributions to the community through the use of amateur radio. During the midwest floods for 1993, Adam who was thirteen at the time, was in charge of scheduling hams for round the clock emergency communications. He also handled net control duties for a local disaster net.
The following year, Adam served as a key communications organizer for the fifteen day U.S. Olympic Festival in St. Louis. And if that is not enough, Adam acts as a net manager for a local emergency service net. He is active in the local Skywarn Network and edits a regional Skywarn newsletter.

"The hobbies can be an important part of a young persons life. It gives them valuable life experiences and provides them the opportunity to meet a wide variety of people.
Ham radio is certainly a unique hobby, by these standards. It is one of the few hobbies where you can have a good time and yet help so many people. And while you should certainly have a good time, I strongly encourage all of you to use your communications talents to help other people in whatever you can do. Because that is what ham radio is really about.
Whatever you decide to do, just jump in with both feet and do the best job that you can do. And people will remember you, because you have done such a good job and you will be helping many

people." Adam Weyhaupt, N9MEZ.

As part of his award, Adam received the Yaesu FT-840 HF rig and FP-800 power supply from corporate sponsor Yaesu, USA. Chip Margelli, K7JA pays tribute to Adams many accomplishments.

"We feel that leadership is important to amateur radio because frankly as we all know in radio clubs leaders are hard to find. Leaders get worn out. Leaders are asked to do too many things. And yet when we have leaders full of enthusiasm, with new ideas we think that is something that is good and should be encouraged." K7JA

The Newsline Young Ham of the Year Award is sponsored jointly by Newsline, Yaesu USA and CQ Magazine.

By the way, the nominating period for the 1996 10th anniversary Young Ham of the Year award is now open. Nominating forms are available from Newsline for an S.A.S.E. or can be downloaded from the ham radio files area on Genie or America Online.

(*****
NEW ZEALAND YHOTY

The United States is not the only country that is honoring its young hams. New Zealand has a very active awards program for its younger radio amateurs.

For some years now NZART, the society representing radio amateurs in New Zealand has conducted awards recognizing youth achievement in amateur radio.
There are two youth awards made annually. An achievement award for the best amateur radio examination result obtained by a candidate under eighteen years old. And the Young Amateur of the Year Award. Awarded to an amateur under eighteen years of age who has demonstrated service to amateur radio in any one of a range of fields of achievement.
Now this years Young Amateur of the Year Award was made to eleven year old Pamela Blackert, ZL1WPB of North Shore in Auckland City. Recently I asked Pamela how it felt to be Young Amateur of the Year.

"It was very exciting and a big surprise and a great privilege to win the Young Amateur of the Year for 1995 at the annual conference." ZL1WPB

Well Pamela to the examination in September of 1994 while still at primary school and just ten years of age. She completed both her examination papers in just twenty two minutes. Tutored by her father Dave, ZL1AD, Pamela is the third generation of Blackerts to be licensed. Her Granddad was ZL2HD. Pamela attends local radio club meetings and participates in the amateur radio emergency organization. Within minutes of getting her callsign she was

active on the New Zealand National HF system.
She was also in regular contact with MIR on voice and packet.
She struck up a rapport with cosmonaut saying that she reminded
him of his granddaughter.

Newsline congratulates both of these youngsters on their
service to Amateur Radio and on their awards.

(*****
NEW VK 10 METER BAND REPEATER

Still in the South Pacific, VK5VB reports that Australia's
Adelaide 10 meter repeater on 29.620 / 29.520 MHz is now
operational. The repeater is located just South East of
Adelaide and was constructed by VK5AH. Any QSL reports can be
sent via packet to VK5VB@VK5LZ.

(*****
RSGB TO INAUGURATE SPECIAL MEMBER RATES

The Radio Society of Great Britain says that it has approved
measures to reward long-standing members of the Society. When
RSGB membership rates rise this fall, continuous members for 50
years or more will receive a 50% discount; 60-year continuous
members will get a free ride for the rest of their lives. The
RSGB also plans a new "Junior Membership" category. The RSGB,
like its counterparts in other countries is raising membership
rates as it faces rising costs of both paper and postage.

(*****
RSGB CON

And the RSGB International HF Convention will take place at Old
Windsor in Berkshire on the 9th and 10th of September. The event
will feature lectures and presentations from some of the world's
top HF operators and DXers, including Roger Balister, G3KMA, who
will give two presentations on the RSGB's Islands On The Air
awards program.

(*****
RICHARD COTTON, W8DX, S.K.

Back in the United States, some sad news to report. Former FCC
Detroit Field Office, engineer Richard Cotton, W8DX, has died.
Cotton, 89, passed away on July 29th.
Richard Cotton was first licensed in the early 1920's, and held
W8LEC before becoming W8DX. An active DXer, he was one of the
first amateurs on the Oscar satellites and held satellite DXCC.
A career veteran with the FCC he joined the Federal Radio
Commission's Detroit office in the early 1930's. He was a
government employee of the FRC and then the Federal Communications
Commission continuously until retiring in 1971, finishing his
career as engineer in charge.

(*****
ZIFF DAVIS AWARDS

Ziff-Davis Publishing has announced the 1995 winners of the Ziff-Davis Shareware Awards. This is an annual competition to recognizes the best in new or significantly upgraded PC shareware programs introduced during the previous year. The winners were honored at an awards ceremony Friday evening, June 23rd, during the Shareware Industry Conference in Scottsdale, Ariz.

(*****
DX-ET

In DX, word that Ethiopian station ET3AA frequents 14.224 MHz around 02:00 UTC. QSL him to Post Office Box 60258, Addis Ababa. On CW, look for ET3YU at the low end of 20 meters around 22:30 UTC. QSL this station via YU1FW.

(*****
HAPPY TOWER

And DXers with antenna problems will be happy to learn that not every tower is unwelcome. In fact, a tower raised to 100 feet over the small town of Wayland, Iowa, will benefit student hams at the town's school. The editor of Popular Communications Magazine has the details:

"The tower erected at the school late last month will support antennas for students who operate the schools amateur radio station, KB0SAL.
The tower was obtained from state surplus two years ago when it was taken out of service. The tower was erected near the Junior-Senior High Building in Wayland, Iowa and joins two other towers supporting antennas currently used by the school ham station.
Fred Haber, the schools Challenge Program coordinator planned and directed the project. Through the efforts of the Waco School District administrators and workers, permission was obtained to move the tower and its associated parts to the farm community of Wayland for use by the school ham station. With the new towers, student hams at the school will be able to broaden the access to the world in allowing them to meet and communicate with persons all over the world. Haber said a number of inter disciplinary projects involving students who are not hams also may be undertaken.
Haber cited that the benefit of having foreign language students communicate with Spanish speaking hams in Central and South America. Or having students enhance their geography lessons real world links to other states and countries. He also sees cooperative class projects in cultural studies, weather, soil and water resources.
The tower project actually became a community project in Wayland as residents with certain expertise helped with various stages of construction and the towns telephone company lent

technical support from its staff. Adult hams from surrounding areas in Henry and Washington Counties pitched in as well as a half dozen student amateur operators.
In addition to benefiting the students the new tower will also benefit southeast Iowa hams. Packet will be digipeated off of the tower once the equipment is setup." Chuck Gysi, N2DUP

Chuck will have a complete wrap up on this story in an upcoming edition of Popular Communications Magazine.

(*****
ROSALIE WHITE JOINS YHOTY

Word that 1995 Radio Amateur of the Year, Rosalie White, WA1STO has accepted an invitation to help guide Newsline's Young Ham of the Year Awards program into the next century.
As most of you are aware, Rosalie is the manager of the ARRL's Educational Activities Department where one of her duties is to coordinates the leagues' continuing education workshops held at conventions around the country. WA1STO is also a member of the SAREX Working Group and in both positions she works very closely with the educational community.
Rosalie White joins Rich Moseson, NW2L of CQ Magazine, Capt. Larry Zettwoch, KR4IF of US Air, Keith Glispie, WA6TFD, of Fox Television and Bill Pasternak, WA6ITF, of Newsline in serving on the Young Ham of the Year Awards Steering Committee.

>If it works for you why did you respond?
>(thanks for your support in PRIVATE messages)>

I don't call that responding - it wasn't meant for you anyway.

Hmmm, as for private messages supporting you... I recall that
some months ago I sent you some mail asking what your interests
are in ham radio, and why you kept your license, if you have such
a low opinion of hams in general. I don't remember the details
of your reply, but I think my response was to suggest that you
grow up, and I do know that your reply to me was one that made
me decide to terminate the correspondence.

I find some hams boring, they probably find me equally boring.
I just don't feel like making an issue of it every day on this
newsgroup. If you call that support, fine - I certainly don't
support anything that you have posted in recent weeks, although
I admit that I have not read most of it.

Have a nice life!

4112. Re: CW, is it modulation?

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-05 00:00:00 UTC
From: brian.carling@acenet.com
Message-ID: <2a6.21412.545@acenet.com>
Source record: 239159

Dana Myers pontificated thusly:

DM>I know this is useless, but there's nothing "pedantic" about insisting
DM>on correct vocabulary in a technical discipline.

Sorry Dana, for most of us mortal hams, this is not a "Technical
Discipline", even if the FCC words it that way. It is a hobby!
Get a life!

DM>Apparently, Brian,
DM>you mistakenly believe that "variation" of a carrier can not include
DM>turning the carrier on and off.

In common parlance, Dana, we do not say "VARIATION" for things that go
on and off, for example, "Honey would you go VARY that lamp?"!

"I got in my car and VARIED The engine!"

Riiiight Dana!

DM>This is your technical mistake;
DM>keep in mind *any* variation of a carrier, including switching it
DM>on and off, is indeed modulation.

I personally don't gove a rat's behind what pedantic discussion you can
generate about this nonsense. CW is not referred to as "amplitude
Modulation" by the vast vast majority of my fellow amateurs in their day
to day technical discussions, so I do not bend toward this silliness.

DM>Your social mistake is your apparent inability to admit a technical
DM>error and learn.

And yours is to go on and on and on and on and on endlessly hoping
to ram your point home by mindless repetition of the same drivel!
I admitted eary on that there is a change in amplitude between
zero and max, and I am fully aware that there is a rise and fall:
an envelope if you will. That does not pertain to my point which is
simply that we hams do not refer to it as AM nor think of binary
digital coding as AM. Simple enough. So quit chipping away!

DM>Furthermore, you go on to berate anyone who does not
DM>agree with you, declaring them full of "horse poop" and "pedants".

No, you lie. I did NOT call any individual either on of those names.
If you can supply the quote where I did, please put up or shut up!

DM>I'm not rude or arrogant to point out your errors;

Oh nooooooooooo! I know you wouldn't dream of that!

DM>I'm just stating
DM>objective fact: CW, as defined by the ITU and FCC, involves modulating
DM>the amplitude of a carrier with digital information. Please stop
DM>trying to confuse those who are still learning.

No. Now go talk about something useful that has meaning and a real
point! You are wasting your keyboard time on this garbage!

>Just a few things:

>1. Isn't it racism to say that german hams are racists?

Karl-Heinz,

You are quite correct, of course. There are those, however, who enjoy baiting others and tarring all of certain nationalities with the same brush. they delight in making overtly racist or ethnic slurs and then cloak themselves in some inagined sanctity by proclaiming that the did so to protest against racism! How absurd. This phenomenon does, however, go a L-O-N-G way toward explaining why we have the current situation in Bosnia and have allowed the victimization of the Palestinians for almost 50 years. This sneaky kind of racist hate mongering is disgusting.

>>much to blame for WWII as the Germans, by insisting on impossible

>Blaming the victim?
>And girls are responsible for rapes by wearing short skirts?

You are truly the master of the irrelevancy... OK, here's a brief history lesson. At the end of WWI, the French were pissed. Rather than just ending the war and carrying on, they insisted on making the Germans pay for every penny of damage that they caused, and more besides. Germany couldn't afford these payments, which led to a severe depression (somewhere along the lines of a Billion marks for a loaf of bread), which in turn caused a lot of political upheaval. Along comes a "savior" who promises to help the economy--Hitler.

To blame Hitler for the sum total of the war's devestation wouldn't, perhaps, be completely accurate, but he had a hand in a lot of it. To blame the French for all of it wouldn't be reasonable--they couldn't reasonably forsee the results of their actions. However, were it not for the Versailles treaty, WWII would not have happened. Were it not for Chamberlain's (sp?) selling out Poland for "peace in our time," Hitler would have been stopped much earlier.

>> Have you met any Germans in, say, the last 10 years? My experience
>>has been that they're far less racist than most Americans.

>And how many minorites are there in Germany?
>Not many Jews wether there, wonder why?

To answer your first question, lots. Not, perhaps, as many as in the USA, but Germany's immigration policies are a lot looser than America's, and there are plenty of Greeks and Turks there, as well as lots of Eastern Europeans. I've met a good number of Jews there as well, particularly around Dachau.

SB SPCL @ ARL $ARLX049
ARLX049 Hurricane Luis 1

ZCZC AX19
QST de W1AW
Special Bulletin 49 ARLX049
From ARRL Headquarters
Newington CT September 5, 1995
To all radio amateurs

SB SPCL ARL ARLX049
ARLX049 Hurricane Luis 1

As of 1800Z or 2:00 PM EDT/AST this afternoon, the center of Hurricane Luis is located at 18.0 degrees North latitude, 62.3 degrees West longitude, or 50 miles east of Saint-Martin. Maximum sustained winds are reduced to 130 mph. Consequently, Luis is reduced to a Category Three (on the Saffir/Simpson Scale) storm, traveling WNW at 9 mph. A 9 to 12 foot storm surge can be expected. Damage in its path is expected to be extensive: Large trees blown down; some structural damage to small buildings; mobile homes destroyed; serious coastal flooding; many small structures near coast destroyed by wind and waves; almost all small boats torn from moorings.

Reports gleaned from on-the-air monitoring at ARRL HQ at 1800-1830Z on 14.268 MHz indicate that Dominica suffered damage along its North coast: some roads damaged and trees down; minor damage to residences; power is out. Stations in St. Maarten report extensive damage along the waterfront at Simson Bay. No reports of deaths or injuries have been received by the net.

In anticipation of a possible swell of health and welfare traffic, National Traffic System (NTS) Eastern Area Digital Coordinator Nick Zorn, N4SS, reports that the NTS Digital Net is preparing to handle Luis-related messages: the Eastern Area Digital staff will be recommending that messages addressed to affected areas be routed via an Eastern Area Digital network representative for handling when stations in the affected areas are prepared to receive and process them. The Eastern Area mailbox operators to be involved are: N2JAW, W1FYR, KQ4ET, WX4J.

The Hurricane Watch Net is active on or near 14.325 MHz, and is currently soliciting reports from stations in the affected areas.

Amateurs are advised to monitor storm-related net frequencies, but
to not transmit unless directed to do so by net control stations.

: Why are 800 MHz cellular phones forbidden on air carriers when
: the same airline offers cell phone service to its passengers using
: a credit card? Any logic here?

Two things come to mind:
1) The airline may or may not get to keep part of the money charged
to your credit card.

2) Your personal cellphone's antenna is inside the plane, where it
does a lousy job or getting a signal out to the cell site, but
quite possibly a good job of screwing up the aircraft electronics.
The airline can mount antennas on the outside of the plane.

3) at 30,000+ feet, your cellphone would have a good line of sight to
a very large area, thus possibly tying up a channel on many cell
sites instead of the one you had intended. The airlines can operate
a "private" cell system on a different set of frequencies to avoid
this.

>Any help would be appreciated.

The easiest way to detect and jam such a bug is to tune an FM
broadcast receiver (with the volume turned up high) across the
FM band while near the bug. When you hit the bug's frequency,
a loud feedback howl will result. Not only does this locate
the bug, but effectively jams it as well.

Correct (for now anyway).

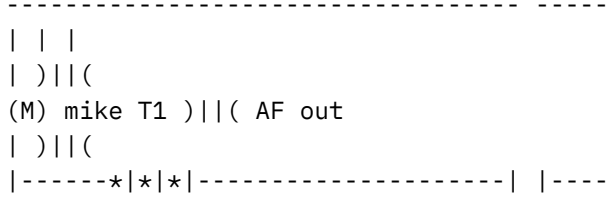
>P.S. Err, just how do you build a FM transmitter using a carbon mike
>directly? I'm aware that you can build an AM transmitter by amplitude
>modulating a carrier directly via absorption modulation using a carbon
>mike (and you can get some real nasty RF burns on your lips this way, too!).

Gad! You don't want to do that. Use the carbon mike in the *cathode*
circuit. Use RF bypass capacitors at the cathode to keep RF off the
mike. You can also do conventional plate modulation with a modulation
transformer and a battery loop for the carbon mike. (Of course if you're
into high power, parallel a bunch of carbon elements to keep the current
below the clumping level, or get modern and use an active device to
amplify the output of the carbon loop.)

>However, I'm not sure how you would change the frequency (at least, in any
>predictable way) by using a carbon mike. Hmmm, you might be able to
>directly modulate an FM signal using a capacitive microphone.

You can use a capacitive mike directly, but it tends to be microphonic,
IE it's hard to avoid lots of handling noise. The way our friends at
Motorola used a carbon mike in FM gear like the 5V and 40D was to feed
the carbon loop to an audio amplifier which then drove a reactance
modulator (or today a varactor). To drive a varactor, you can skip
the audio amplifier and just take the output across a loop choke
(or an audio transformer) to drive the varactor.

Here's a more or less typical carbon mike circuit.



Battery

A carbon mike is just a variable resistor whose resistance is proportionate to the sound waves striking it. It modulates the DC in the battery loop and expresses the audio across the audio transformer (or a choke, or the mike element itself, with capacitor audio pickoff). Carbon mikes can easily handle currents up to around 100 ma, so fairly high level audio output is possible. Battery is typically 45 to 90 volts (a real battery isn't needed, any DC source will do, including that found in a tube's cathode circuit).

You *could* use a carbon mike directly to control the frequency of an oscillator, like a 555 astable for example, by using its "R" as the "R" in the oscillator time constant. Or you could use the varying DC from the loop to vary the junction capacitance of a bipolar transistor oscillator.

A crude, but servicable, carbon microphone can be made with two double edge razor blades and a pencil "lead" (from a mechanical pencil). Just stick the razor blades in the lid of a cardboard box, a cigar box works great, and lay the pencil lead across the two blades. Hook your wires to the blades, add battery, and you're in business. Of course it's easier to just grab a good carbon mike out of a telephone handset.

Continuing along the line of improvised microphones, a small speaker, or a headset element, make very servicable dynamic microphones. A crystal earphone, or a ceramic phono cartridge, can be used as piezo microphones as well. The earphone needs a bit of rubber tubing and a household funnel to get best output, and the ceramic cartridge can have its needle placed on a sounding board (again the faithful cigar box works well). These microphones *will* need an audio amplifier of some sort. Unlike a carbon mike, their output is low, though the ceramic cartridge can put out half a volt of audio or so if you shout at the box. At normal conversational levels, you'll only get a few tens of millivolts out of these improvised mikes, and will need an audio amplifier. A carbon mike can produce up to about 5 watts of audio without an amplifier. (You normally wouldn't run the loop that hot, but you can.)

The fidelity of these improvised mikes can surprise you. All of them are of adequate "communications" quality, and some are better than that. I've used both the razor blade carbon mike and the crystal earphone piezo mike with AM transmitters, and got *compliments* on the audio quality. Whether that says something about the quality of typical amateur microphones (and over-cranked speech processors) or not I'll leave you to judge.

This is, somewhat surprisingly, a very well made little counter.
One of its better features is that it isn't overly sensitive,
unlike some of its competitors, so it'll work properly even in
a high RF environment. Recomended.

(If you want a "snooper", this isn't the counter for you. But
if you want a good piece of test equipment, this is a bargain.)

>necessary skills and not the result of crying 'poor me'!

It's not about crying "poor me". Rather it is about whether a code
speed test is a "necessary" skill for HF access any longer. The FCC
has already spoken about whether a code speed test is "necessary"
for VHF+ access. I think the answer is the same for HF, but the
FCC can't act as long as Article 32 of the ITU regs requires it.
After the next competent WARC, that may change. The original
rationale for a code speed test is gone with the passing of
life safety service use of Morse. It's now just one of many
modes amateurs can choose to use, or not, on HF. Survey says
78% of presently code speed tested amateurs choose not. That
puts Morse usage squarely in the specialty mode category along
with other minor modes (which do *not* have separate test elements).

Not to be uncharitable, but you may have been trying for years *the wrong way*. It took me 13 months to get to 13 WPM, and no it didn't come 1 WPM per month. I had to try several *different* conditioning strategies before I found something that worked for me. The way I discovered may not work for you, but the odds are that there is *some* strategy that will work. Just banging your head against the same wall, probably *isn't* the correct strategy for you. Try several different methods, and give each a fair chance. Human variability in this sort of conditioning is huge. One method does not fit all, just like one size does not fit all.

>devoted to packet only and tv, etc. If HAMs cling on to the past,
>amature radio will become a thing of the past.

Your points would carry more weight if you could spell "amateur", but be that as it may, I agree that the present baroque and bureaucratic licensing structure has done harm to the amateur service over what is now three decades. But adding *more* layers to the baroque cake *isn't* the answer. Instead we should be attempting to rationalize the testing and licensing system to meet the legitimate interests of government in regulating our access to the airwaves, *and stop there*. Beyond those legitimate interests, what modes amateurs choose to use, or what equipment and methods they choose to build or operate should be part of the lifelong self-learning aspect of amateur radio, as free from arbitrary bureaucratic interference as possible as long as good engineering practice is observed.

> Also why the devil should we keep code when technology has made it
>obsolete? Even in third world countries they have voice
>communications?

(Oh, the devil is making me do this.) Voice is the least efficient mode under severe interference or high noise levels. Poor as it is, Morse can be better. Of course there are much better methods than Morse too, but just saying the third world has access to voice technology isn't a good argument. A better argument would be to say the third world has access to better techniques than Morse, which is true. But even that doesn't cut to the heart of matters. Perhaps much of the third world has to carry water from a stream in buckets, but that doesn't mean first or second world people shouldn't use the tap over the sink until they've demonstrated that they too can carry buckets from the stream. Limitations on the third world simply aren't relevant to conditions in the first or second worlds. Universal interoperability is a laudable goal to some, mostly DXers I suspect, but Morse interoperability doesn't require manual methods on *both* ends of the circuit.

Yes, there is incentive to upgrade, but incentive to do *what*? Mainly it is incentive to condition wetware to be a mediocre modem, a rote process. Is that really something we *want* to encourage? Wouldn't it be better if the incentive system were to have as a goal encouraging something more useful and relevant to modern communications? For example, a grasp of the idea of lifelong learning and experimentation with various communications techniques. That's what amateur radio is supposed to be, a living classroom, not a rote conditioning exercise in the most primitive of techniques. A system that encourages people to turn off their thinking processes in favor of reflex seems more harmful than beneficial to me.

The 850 DSP100 and the 950 both have dsp in the if. The 950 is the most flexible as to controling the bw, etc. They however do not do any tone or noise removal. Maybe the 970 is the next generation.

In <1995Sep4.125617.26423@ke4zv.atl.ga.us> gary@ke4zv.atl.ga.us (Gary Coffman) writes:
>
>If Morse speed is important, how can you justify allowing people on
>the air with less than 20 WPM?

Gary, it is just like business, the better you are or the more proficient, the higher you advance in the organization. In the case of Amateur Radio, the more privaleges that you receive.

>If code speed is *vital*, a "must"
>as you noted in your first paragraph, then why allow lesser mortals
>on the air with a lower speed, or no speed as is the case for Tech?

I never meant to imply that code speed was vital or a must, but I believe knowing the code is a must.

>Either it's something the government should require, or it isn't.

No, I disagree. That kind of opinion implys that everything should be completely equal and it is not. For instance, does the government require that all civil servants know how to type? You are required to know what you need to know or MAY need to know.

>Just as you can't be "a little bit pregnant", a government mandate
>should be uniform, or it's not justifiable at all. There's no
>qualitative difference in the privileges of a General and an Extra,
>just a small quantitative difference in subbands.

That is a quantitative difference. You have more radio specturm avaliable for your use. Also, does that mean that every driver needs to pass a test to receive a CDL just to drive a car? We have different driver's licenses with different tests. We could go on and on with examples. In this case, the HF bands are the equivalent of the CDL. If you only want to drive a car, you can take the passenger car driver's test. But if you only have this class of license, you do not get to drive a car. Should someone that passes his or hers FAA test be automatically entitled to fly any kind of plane? The more training, the more skills, the more benefits - just like ham radio.

>Which is the necessary and sufficient test speed? Is it 13 or is it
>20? Or perhaps it's 5, or 0, where do you make the distinction between
>"must" and "it would be nice if"? And what's the government doing
>involving itself in "it would be nice if" anyway?

Just like your job, someone determined what your skills should be for the job. Should it be this or that or this and that? Someone had to

make a deicision on what was reasonable. Someone made the decision when it came to the code. I'm tired of too many lazy people whining about the code. Lazy in that they will not spend the time and work hard to learn it. I think it is a symptom of today; nobody wants to work to achieve. They just want everyting handed to them.

I must commend you on the fairness you have and I do not.
You are a better person than I.
Frankly if I were in a position to hire people I would hire on merit
across all races except Germans. I am in that way prejudice.
I just keep reading about them in WWII, and the citizens ALLOWED
it to happen.

Actually they were much like hams, they looked the other way.
And actually I yet respect Germans MORE than the ham community.
If hams were in Nazi Germany in the 1940s it would have been worse.

>want to work them to get another "country."

Ah yes, nothing like a nice ad hominem attack... I don't work HF, and
I really don't give a rat's ass about contesting/awards, so you're
wrong on that count, if no other.

Second, your analogy is more than a little silly. By refusing to
answer any CQs from Germany, you're "punishing" _all_ the residents of
a country which started a war 50 years ago. These people have
nothing to do with what happened then, and they're _constantly_
reminded of it. It's not likely to ever happen again--"Never again"
is burned _much_ more strongly into their minds than it is in yours,
I'm sure.

If Germany were entirely peopled, today, with the likes of Hitler,
Goering, Goebbels, etc., your analogy might make a little sense. Not
much, maybe, but just a little.

There's one word that you seem to be completely unfamiliar with, which
might just help out a bit. "forgive." It shouldn't be too hard in a
case where none of the people you're blaming had anything to do with
the atrocities you're blaming them for.

> What's the "competitive advantage" to use a marketing term?

Although I'll probably get torched for even suggesting it, but why doesn't some energetic soul post an RFD for "rec.radio.amateur.dx"? Personally, I'm not fond of mailing lists, and prefer to participate in open forums here on Usenet. Due to the volume (not to mention the S/N ratio) here in "rec.radio.amateur.misc", it's not unusual for articles to expire on my ISP's NNTP server before I get around to reading them. And for those who can't read news, such a group could always be digested and reflected to any number of mailing lists.

I, for one, would read a DX group with some regularity. Anybody else? If the response is positive, I *may* even volunteer to post the RFD -- I've always been kinda curious about the process anyway. (Okay, call me a masochist. But then who else would chase DX with 150 watts to a vertical when old Sol is in the dumper? ;-)

4166. Protect 14.100 MHz DX Beacon Subband

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-05 00:00:00 UTC
From: Pierre Thomson <mmommsen@mhv.net>
Message-ID: <42hecp$pv@over.mhv.net>
Source record: 239225

Many hams seem to be unaware of the NCDXF / IARU beacon network
that operates on 14.100 MHz. This system consists of ten or more
transmitters located around the world, which transmit periodically
at power levels of 100, 10, 1, and 0.1 watts. These signals give
a good indication of CURRENT propagation conditions to thousands
of hams around the globe. (See QST, Oct. 1994 pp. 31-33)

Much of the time, however, QRM masks these faint but useful signals.
The bulk of it is caused by digital transmissions on or close to
the beacon frequency.

The IARU has endorsed a recommendation for a quiet spot 2 KHz wide,
centered on 14.100 MHz. This would mean that no signals or sidebands
should fall between 14.099 and 14.101 MHz.

*** ALL AMATEURS ARE ENCOURAGED TO RESPECT THIS RECOMMENDATION! ***

Listen for the beacons yourself, and improve your DX ability!

: Actually, in the case of cellular phones there's nore to it than that.
: The FAA doesn't like unapproved electronic devices as you note, but in
: the case of cellular the FCC specifically forbids their use because
: at the altitude of an aircraft the phone would occupy *many* cells
: at once and adversely affect the cellular network. The airphones operate
: on different frequencies from cellular, and with a ground network
: designed for aircraft sources, so they don't have that problem.
: (Newer airphone systems are satellite anyway.)

: >Same goes with flammable liquids, wet batteries, flare guns, compressed
: >gas bottles, and so on. Forbidden as cargo, but aboard every flight!

: Hazardous materials can be shipped air freight in certain cases. Guns
: and ammo can be shipped on any flight where they are declared, and
: compressed, and even cryogenic, gases can be shipped in FAA approved
: containers. Acid can be shipped too, but wet batteries generally
: aren't approved containers for it. They are shipped as part of a
: larger cargo, however, such as when included with a generator set or
: as part of a vehicle being shipped. Those latter items generally
: aren't shipped on a *passenger* aircraft, however.

GSM phones are not forbiden in European flights, they only forbid
the use of *any* electronic device during take off, and landing !

>
>Looking forward to operating as a VK.

Alex

We can operate 144-148MHz. Presumably you wish to work the 2m
repeaters here. They have inputs from 146.625 through to 147.375,
with inputs -600 up to an including 147.000, and +600 above that.

There are a couple of repeaters in Australia that are slightly outside
these guidelines, but can be safely forgotten about.

When in Australia, you can by "The 199x Australian Call Book" which
includes band plans and a full list of repeaters.

I hope that's of some help.

Regards,
Craig VK3CRA

Source record: 239229

For Sale: Standard Dual Mobile Rig Model C5718a.
2m/440Mhz 50W 2m/40W 440Mhz
200 memory channel chip (CMU 182)
CTCSS encode/decode w/DTMF paging
4 meter speaker/mic control extension (CAW572)
Super extended receive on both bands AND 850-950 Mhz receive
full duplex/cross band repeater
DTMF auto dialer
8 different scanning functions w/block scan
9600 baud packet ready

In almost new condition--less than a year old--in fact it's still under
warranty. With all receipts, boxes, and manuals.

Paid $784 for radio and all accessories (current price is very similiar.)
Selling for $599.

If interested, please e-mail to Eugene.Watanabe@m.cc.utah.edu
or call (801)-266-8741 (Utah)

Thanks!

4171. Re: Calling pagers with autopatch?

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-05 00:00:00 UTC
From: mmusick@talx.com
Message-ID: <mmusick-0509951013020001@198.102.74.50>
Source record: 239230

> Another ham told me the other day that calling a pager using autopatch is
> illegal. Is this true?

Jerry -

No. There is nothing inherently illegal about calling a pager access port.
But whether it's practical depends on the circumstances.

Your main problem is that the repeater will likely have DTMF suppression
of some sort, and won't pass the tones down the phone line. Some
controllers have a bypass code to do this, but then it becomes a question
of whether the owner/trustee is going to share that information
(frequently this is regarded as a special function for control op use
because of its potential for abuse).

Another problem is that if there is a "voice mail" associated with the
pager, if the outgoing message clearly relates to the paged party's
business, then it becomes difficult (from an enforcement/monitoring
standpoint) to determine if the traffic was of "pecuniary interest" to the
initiating station. (Real scenario - two members of our club work for the
same company, and one reports to the other. It is conceivable that the
supervisor could access the other's pager via the autopatch and load the
phone number for the next assignment. Since the control operators heard no
traffic other than the supervisor's ID and a few DTMF tones, they have no
idea that a pretty flagrant rules violation just occured.)

The short answer is that dialing a pager access number is *not* illegal,
but whether it's going to be *allowed* by the repeater/autopatch operators
is something you'll have to take up with them.

4174. Re: Change WBFM to NBFM????

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-05 00:00:00 UTC
From: Jim Strohm <jstrohm@blazer>
Message-ID: <42ht1a$hap@unisql.unisql.com>
Source record: 239233
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.amateur.misc

Most of these miliary rigs can be "converted" to NBFM by placing a series resistor in the mic audio line. This provides a lower amplitude to the modulator, and hence reduced deviation. Start with a 5K pot and a deviation meter, and see if this works for you. If all is well, install a fixed-value resistor in the mic.

From an *old* joke about politics in Middle East;
All of the major players in the ongoing crisis are discussing the situation
and one of them ask, "Do you thin there will ever be a solution?" The others
think about this and one of them says, "Yes, but not in my lifetime."
After many many years, they are in heaven. They get together and ask God
if there will ever be a solution. God answers, "Yes, but not in my lifetime."

Yup, this CW thing is going to go on forever. Probably just as long as the
good old boys still sport the stars and bars down south too. It's a religious
thang.

>this group, or are you just here to make stupid insults?

no, that's a real case -- "J. K." believed that amateur radio operators were
not and could not be good engineers even tho there were 45 working for him.
he was vocal about this on more than one occasion -- fortunately, he's
retired but still there are those that point to things like your saying that
"traditional amateur definitions" are "right" even when they are proveably
wrong as what's "bad" about amateur radio.

and maybe they have a point. part of the reason for being of the amateur
service is for improvement of the operator's knowledge...

do i make a lot of mistakes? sure...

Burt:

You are very willing to criticize "all ham radio operators", yet we hear nothing from you about the positive things you have done... like elmering kids, operating public service events, spreading international goodwill, increasing your own technical expertise and sharing it with others, etc. Please tell us what sets you apart from your incredibly pejoritive definition of "all hams". You can start with:

1) If ham radio and ham operators are the dregs of the earth, why did you encourage, or even allow, your 14 year old daughter to become a ham?

2) When she was 8 years old and "contacted Australia on her own rig", was she licensed?

3) Why didn't you say "she made friends with an Australian" instead? Sounds like the fact that she "contacted Australia" was more important than meeting the person. I thought you didn't condone this kind of operating?

4) If you are so concerned with youth not being interested in ham radio, why haven't you been more active elmering them? You're a teacher...what better opportunity? Why is it that of the 23 hams in your home town, South Dennis, Mass., 19 or them are over age 62, and only one, your daughter, is younger than 35?

5) And finally:
Burt Fisher (k1oik@ccsnet.com) wrote:

: QSL QSL, CQ DX, CQ Contest, QSL via buro, I have traffic,
: Those topics make my Rohn go erect.

(among many other distastefull comments)

Do you talk this way around your daughter, or do you just expose other people's children to such talk on Internet?

Nobody cares about your Rohn, your opinions about Germans, or your fixation with other hams' bedroom activities. Tell us what you have done for ham radio lately...your public service, your goodwill activities, your technical prowess. So far, you haven't given anyone even one good reason to think you might be interesting to know or even talk to.

By the way, happy birthday (28 August). And you said hams don't care...

Greg

What others say about ham radio and hams:

Date: Wed, 30 Aug 1995 10:15:05 UNDEFINED
From: kevin.jessup@mail.mei.com (Kevin Jessup)
Subject: Re: Why "hi hi" is really used.
To: k1oik@ccsnet.com

Because radio amateurs are so enamored with an archaic mode of
communication (Morse) that they cannot even talk in PHONE mode
without resorting to the Morse code signal used to indicate laughter
or a wry comment.

It's as if I were to hold up a sideways smiley face :-) on a post card after
having made a joke while we were actually talking face-to-face.
...The concept of a HIHI in phone is THAT ridiculous.

Radio amateurs are truly "full of" themselves.

>In common parlance, Dana, we do not say "VARIATION" for things that go
>on and off, for example, "Honey would you go VARY that lamp?"!

[...]

I can understand your point that in most discussions we don't refer to OOK
as modulation, but (from my perspective, at least) it is because it is
understood already and does not add to the discussion to point it out.

However, when the question specifically asks: "Is it modulation?" You should
be able to just answer "Yes", and leave it at that.

In your example, typical usage would not be to say "Honey would you go VARY
that lamp?", but if someone asked you if you were varying it by turning it
off and on, I would hope you could simply say "Well, yes, I suppose I am."

[...]

>generate about this nonsense. CW is not referred to as "amplitude
>Modulation" by the vast vast majority of my fellow amateurs in their day
>to day technical discussions, so I do not bend toward this silliness.
>

That is because their day to day technical discussion usually do not need
to specify whether it is modulation or not, but when the discussion turns
to a subject involving the consequences of modulation, it is certainly
germain to point out the fact that OOK is a form of modulation.

[...]

>DM>Furthermore, you go on to berate anyone who does not

4188. Looking for old QST articles

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-06 00:00:00 UTC
From: VE4KLM <slmusr03@MBnet.MB.CA>
Message-ID: <Pine.SUN.3.91.950906152129.23218A-100000@access.mbnet.mb.ca>
Source record: 239047

I am looking for several articles in old QST magazines that are no longer available at any of the local libraries here. Most of the libraries only catalogue articles back to 5 years ago on micro film. After that you are on your own.

If any one can help me, I would like the following articles :

QST Apr 1959, "An inside picture of Directional Wattmeters", W. Bruene

QST Jul 1973, "A simple computing SWR meter", D. Fayman

QST Oct 1956, "The Monimatch", L. McCoy

Ham Radio Aug 1979, "Broadband Power Tracking VSWR Bridge", H. Perras

Ham Radio May 1980, "Automatic VSWR and Power Meter", V. Leenerts

Also, I find that alot of schematics and articles only deal with HF, how about anything regarding VHF VSWR measurments ?

You can fax (if you don't mind) any articles to the following fax number where I work :

204 783 8286

If you can scan the article (GIF or JPG) that would be even better since we have the UNIX version of XV at our disposal.

I hope some one can help me here. Thanks.

I didn't write my article for money, so I'm not real mad about 73 not paying authors. I picked their magazine because I wanted to get my idea published, orto document my fun. The fact that they were offering me cash was only a benefit.

Now that they don't pay authors the amount they themselves agreed to, I find as only a poor business practice. It's not just one person either. Every name on the inside cover is responsible. They aren't ruled in their personal business practice by Wayne, they had to decide to participate in his article scam.

If you were ripped off by 73, please tell us your story. Let's get a list of editors and distribute the list to the industry :-)

My advise is to stay clear, and subscribe to the newsletters and main stream publications.

>this year's recipient of the Newsline Young Ham of the Year award???

You think a 70 year old would win it?
There are a few young hams but almost EVERYONE gives it
up in two years, most 6 months.

>I rest my case...

You lose.

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 7 to 10 days since you took you examination?

If so, Call ARRL at 1-800-326-3942 (8 am to 4 pm weekdays, eastern time)
to find out -- or call the FCC at 1-800-322-1117 during business hours.

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

If your license has not been granted within three weeks, and your test
was coordinated through the ARRL/VEC, call the ARRL/VEC at 860-594-0300.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 860-594-0300 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "VEC@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number

provided so that the VE Team is aware that you be attending
the test session.

NEED AN FCC FORM 610?

The ARRL/VEC can supply you with your needed Forms 610, whether
they be for the Reciprocal Permit for Alien Amateur Licensee,
Form 610-A; Club/Military-Recreation/RACES station, Form 610-B;
or Form 610 for Amateur Operator/Primary Station License. FCC
Form 610-R is a computer generated renewal form that will be
sent from the FCC (beginning September 1995) to licensees whose
license is to expire within 90 days. Form 610-V is the special
application for persons seeking a Vanity call sign (as of
September 6, 1995, that form is not available -- send the ARRL/VEC
an SASE if you would like us to supply you with the form once it
becomes available).

Several FCC forms, including Form 610, are available through the
FCC's fax-on-demand service by calling 202-418-0177
(request form "000610").

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact
the ARRL Educational Activities Department (EAD) at
860-594-0301. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "ead@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 860-594-0300
The 1995 test fee is $5.90.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC - HAS TERMINATED OPERATIONS

D = Great Lakes ARC VEC Inc. - STATUS UNKNOWN

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;
414-774-6999.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;
408-255-9000

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27265;
919-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2500; 615-688-7771.
The 1995 test fee is $5.90.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1995 test fee is $5.90.

[[EXAMNT9.06W : 4113 in EXAMNT9.06W]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 7 to 10 days since you took you examination?

If so, Call ARRL at 1-800-326-3942 (8 am to 4 pm weekdays, eastern time)
to find out -- or call the FCC at 1-800-322-1117 during business hours.

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

If your license has not been granted within three weeks, and your test
was coordinated through the ARRL/VEC, call the ARRL/VEC at 860-594-0300.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 860-594-0300 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "VEC@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number

provided so that the VE Team is aware that you be attending
the test session.

NEED AN FCC FORM 610?

The ARRL/VEC can supply you with your needed Forms 610, whether
they be for the Reciprocal Permit for Alien Amateur Licensee,
Form 610-A; Club/Military-Recreation/RACES station, Form 610-B;
or Form 610 for Amateur Operator/Primary Station License. FCC
Form 610-R is a computer generated renewal form that will be
sent from the FCC (beginning September 1995) to licensees whose
license is to expire within 90 days. Form 610-V is the special
application for persons seeking a Vanity call sign (as of
September 6, 1995, that form is not available -- send the ARRL/VEC
an SASE if you would like us to supply you with the form once it
becomes available).

Several FCC forms, including Form 610, are available through the
FCC's fax-on-demand service by calling 202-418-0177
(request form "000610").

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact
the ARRL Educational Activities Department (EAD) at
860-594-0301. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "ead@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 860-594-0300
The 1995 test fee is $5.90.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;

Hi !

i passed my licence tests in spring '95. At this time i was sure to drop CW entirely after having passed the tests needed for our class 'B' licence, the 'highest' one here in Germany.
However, on a fieldday, 2 weeks ago, i watched fellow hams doing CW and was fascinated by the distances covered with small power and tiny rigs/antennas.

Back home i plugged my straight key, a german 'junker', into my IC 728 transceiver and started again. Two days later i wkd JD1BIZ with 50 watts into my cushcraft R7 vertical here from Hamburg, my hometown.

Now i am beginning to practice with an 'elbug' and try to do 1 - 3 qso's in CW every day at least. Since there are almost no condx on 10 meters it's a very popular 'CW-training area' here and there are OM's, local residents, to have a CW 'chat' almost every day.

Just 'two cents' from a newcomer, being happy with CW.

You are the very first person that I know of that actually knew what the
word meant. You can call me a schmuck anytime because at least you
know what you are saying. Unlike almost everyone else.

Now the next time you hear someone say "For ID", ask them WHY
they said it.

>fixed-value resistor in the mic.

>Jim N6OTQ

While you can "get by" with this method, it is a very poor one. Two
things are being ignored. By dropping the audio input, you will never
reach the level where clipping or compression begins and will lose
considerable average level. Second, you are doing nothing to narrow
the receiver to the expected signal. Adjacent channel problems
can/will come up, as well as poor audio recovery from the received
signal.

Installing narrow IF filters and changing a few components in the
detector circuit, can improve the situation considerably. In some
cases, you might be able to just turn the deviation pot down on the
transmitter and get by with it.

Gary

Amateur Radio Elmers Resource Directory (as of 09/01/95)

- A -

John Ackermann AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a
result, the TAPR net-sig mailing list was born, and is now ready for
operation.

This list is <not> intended to replace any of the existing
packet-related mailing lists. Its purpose is provide a medium for
communications among those interested in packet radio networking, both
dealing with technical issues and political/regulatory ones. We'll
discuss things like how the potential 219MHz band will fit into the
networking picture, how to link areas using different networking
schemes, how to set network parameters, etc. The list's charter will
be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by
sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further
details about the Net-SIG (including upcoming conferences).

JOINT AMPR.ORG IP COORDINATOR FOR OHIO SUBNET (44.070.XXX.XXX)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@ag9v.ampr.org

which is a mailing list read by a team of coordinators.

(see also Tony Schliesser)

[Editor's note: All ampr.org coordinators are listed in the document at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/ampr_coordinators

]

adams@sgi.com

MAINTAINER OF STANDARDIZED INFO SHEETS ON QRP RIGS

They are available from the QRP-L WWW Pages at:

* http://ncc1701-d.cc.nd.edu/qrp-l/index.html
* http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

OWNER OF QRP-L MAILING LIST

The QRP mailing list is open for discussion of any subjects relating to low-power amateur radio operation. Example topics: portable operation, equipment design and construction, solar and battery power, QRPp, contesting, kit building, etc.

This list was started by me with an announcement on the rec.radio.amateur.misc USENET group in early 1993. Bruce Walker, WT1M, maintained the mailing lists and FTP area from then through August 1994 on a system at Thinking Machines Inc., think.com. Then it was moved to qrp-l@netcom.com until May 14th, 1995. Thanks to Mike Ardai, N1IST, for all his hard work during the time that QRP-L was on netcom.com.

I am still the keeper of the non-electronic archives, including copies of some schematics, etc. Contact me directly or watch this list for more info.

To subscribe, send E-mail to:

listserv@lehigh.edu

and in the body of the message, write:

SUBSCRIBE QRP-L your_name your_call

where "your_name" is your real name, and "your_call" is your callsign,
if any. For example:

SUBSCRIBE QRP-L John Doe K5FJZ

A welcome message with more detailed help will follow shortly.

To unsubscribe, type:

UNSUBSCRIBE QRP-L

"""

* VHF packet (AX.25 and TCP/IP)
* HF SSB and RTTY
* FM/repeaters
* Clubs/activities
* Public relations
* Writing (for newsletters and ARRL publications)

My job at as QST Features Editor at ARRL HQ includes (among other things) writing and editing general-interest feature articles for QST,

and writing the FM column, Up Front in QST and Strays.

I'm the "handling editor" (copy editor+) for other regular columns conducted by other contributors, including Packet Perspective by Stan Horzepa, WA1LOU; Public Service by Rick Palm, K1CE; Club Spectrum and Section News by Steve Ewald, WV1X; How's DX? by Bill Kennamer, K5FUV; Happenings by Jim Cain, K1TN; Contest Corral and Special Events by Warren Stankiewicz, NF1J; Hamfest Calendar and Coming Conventions by Gail Iannone; most of the contest rules announcements and results articles; and I compile the Annual Index in the December issue.

I coordinate and often contribute to the New Books reviews and New Products listings scattered throughout the magazine, and often contribute to QST Product Reviews. I also wrote the "Modes" chapter in the 1995 ARRL Handbook and chapters in the ARRL Operating Manual, and I've contributed to several other publications, including W1FB's Help for New Hams (ARRL) and Ham Radio Horizons (CQ Communications).

I started working at ARRL HQ as QST Copy Editor in December 1989.

I'm 37 years old, I've been a ham since 1976 and I hold an Amateur Extra Class license. I'm a member of the ARRL, the ARRL A-1 Operator Club, Ten-Ten International Net (53313), and the Middlesex Amateur Radio Society/Connecticut Amateur Radio Emergency Service (MARS/CARES, an ARRL Special Service Club, in which I served two terms as president and a couple of years as newsletter editor). I'm also an ARRL Public Information Officer for the Connecticut Section. These days, most of my on-air time is limited to 2-meter and 440-MHz FM and 2-meter TCP/IP packet radio, although I crank up the HF rig when I can spare some time and try to join in VHF/UHF contests when I have the time and access to equipment. My favorite Amateur Radio activity is Field Day; the MARS/CARES club has a terrific time with that event every year.

I have about 10 years' experience with personal computers, including MS-DOS, Windows and IBM OS/2. I was a full-time professional commercial broadcaster for 12 years.

AUTHOR OF THE FOLLOWING MS-DOS HAM PROGRAMS:

* AutoExam - Examination simulator and study aid
* AutoCW - Morse Code practice program
* DOSGATE - allows users to run programs on your PC remotely (AutoExam compatible)
* AutoCall - Allows use of the Buckmaster HAMCALL CDROM online callbook with DOSGATE
* AutoFax - Allows reception of weather fax using Kantronics TNC's
* SeeSats - Real time satellite tracking (text only), DOSGATE compatible

Most of these programs are available via anonymous FTP from:

* ftp://oak.oakland.edu/SimTel/msdos/hamradio/
* ftp://wuarchive.wustl.edu/systems/msdos/msdos/hamradio/

or write me at:

7 Redfield Circle
Derry, NH 03038

and enclose:

* A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5"
or 5.25").
* A Self Addressed STAMPED return diskette mailer.
* A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

MAINTAINER OF THE REC.RADIO.AMATEUR.* SUPPLEMENTAL ARCHIVES AVAILABLE FROM:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

MAINTAINER OF THE INTERNET HAM RADIO CALLBOOK SERVER AT:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the
server's help facility, the rec.radio.amateur.misc FAQ, or additional
server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have
talked with me via E-mail know that. But this time I've actually
started on my rewrite of the callsign server at Buffalo. And I've
finally got a design that I'm happy with. The new searching
capabilities are going to be *much* improved over the current system.
I'll be getting rid of the bugs in the current telnet system and
making it available to more people. Also coming is a WWW front-end for
web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database
look-up system. The old system was very specific to the FCC database
format because that's all that was available when it was written (yes,
the server is very, very old). But now there are a number of databases
floating around the net for different countries and I am rewriting the
system to be more flexible and to accommodate a variety of formats and
search types.

In doing so, I'll have the ability to add data for many more
countries. That is, of course, if I have the data. In order to do this
I need help. I need to get in touch with all people that have access
to databases from countries other than the US. The more up-to-date
these databases are, the better. If you have access to a database and
would be willing to donate a copy to the callsign server for everyone
to use, please contact me. A lot of people would genuinely appreciate
it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Look for the new server in two or three months. Until then you can access the current one.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

My electronics expertise is mostly analog, but I have some insights into DSP applications that can do better in what used to be the analog dominions. I can be of the most help with low-frequency analog stuff, particularly measurements and low-level/low-noise/low-distortion applications. I breadboard with IC's, discretes, and surface mounts (which I prefer to use now, as surface mounting requires less drilling of PCB boards once they are etched). My electrical engineering education (Ph.D.) emphasized control systems. I also have a clear understanding of transmission line measurements and behavior (a personal research interest for the last 25 years or so).

Barry Buelow WA0RJT

Barry Buelow WA0RJT Packet BBS in Cedar Rapids, IA
barry@ia.net WA0RJT@WA0RJT.IA.USA.NOAM

The Tuscon Amateur Packet Radio (TAPR) Bulletin Board Special Interest Group (BBSSIG) is sponsoring a working group to generate and distribute a series of information bulletins which will serve to instruct packet radio users in a variety of areas. These bulletins will be distributed via the packet network and can be retained at each BBS in a file area. An index will be provided to allow users to find information they desire.

If you are interested in actively participating in this effort and can work on a collaborative effort, please speak up. Send a message to my E-mail address above.

[Editor's Note: As this project is still very much a work in progress, and its eventual products will certainly be made available via several information sources (including the Internet) as soon as they are completed, I'm sure Barry would appreciate it if only serious volunteer contributors contacted him at this time.]

MAINTAINER OF LIST OF PERIODICALS OF INTEREST TO QRP ENTHUSIASTS, ELECTRONICS BOOKS OF INTEREST TO QRP ENTHUSIASTS, AND ANTENNA BOOKS OF INTEREST TO QRP ENTHUSIASTS

Available from the QRP-L WWW Page at:

http://ncc1701-d.cc.nd.edu/qrp-l/index.html

Since QRP-L has moved to lehigh.edu, the articles will also appear at this address on or about June 1, 1995:

http://www.lehigh.edu/lists/Archives/qrp-l/

(Note: the "A" in Archives is capitalized.)

Please direct all submissions, feedback, and administrivia for these articles to my E-mail address above.

I serve as an Educational Advisor to ARRL and hence fall within the loose bounds of their field organization. I know something of the fundamentals in electronics, having written the current Chapter 6 of the 1995 ARRL Handbook, and something of antennas, with a series appearing in Communications Quarterly. I serve on the Board of Directors of 10-X International and maintain memberships in most of the QRP organizations, as well as the Quarter Century Wireless Association (QCWA). As to what I do not know, there are no limits.

I also know something of the craft of technical writing and editing, being director of Techwright, an occasional consulting operation in this field with my wife, Jean, N4TZP, who has been a technical editor and writer since 1980.

Arthur Chandler KO6OA

arthurc@crl.com

BayMOO, an all-text virtual-reality on the Internet (a form of Multiple-User Dungeon, or "MUD") has just completed an amateur packet radio simulation "room." This room can serve to help orient non-hams, or non-packet-operating hams, to some of the operating conventions and experiences of amateur packet radio networks.

BayMOO may be accessed from:

telnet://baymoo.sfsu.edu:8888/

When you log into BayMOO, just follow the instructions ("HELP," "MOVEMENT," and "HELP COMMUNICATION" will give you most of the basics.) To go to the packet radio simulation room, type:

@go Virtual Ham Central

You will need to contact "Akira" or "Dr.J" in the room to get transmission privileges.

You may use BayMOO with guest privileges by using your callsign as your guest login name (if you have one). If you want a permanent login, write to:

rk@world1.worldbit.com

giving your callsign as your username.

GRAPES 56 KBAUD PACKET RADIO MODEMS

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20, creditable towards a later order) write to GRAPES at

GRAPES, Inc
PO Box 636
Griffin, GA 30224-0636

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

(see also Bob Merritt)

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and

LAN Workplace.

I'm still clueless in the electrical/circuit department.

William (Bill) Coyle N3OGH

wcoyle@dccc.edu

AX.25: N3OGH@AA3CH.EPA.USA.NA

My primary experience is with HF communications, particularly with the Kenwood TS-830S and TS-940/AT. My preferred mode is CW, although I also use SSB. I have had experience with light service on both rigs (including the internal antenna tuner on the 940 and the tube finals on the 830). I have the service manual for the 940.

I am particularly interested in helping new hams design and set up HF stations with multi-band wire antenna arrays.

Other than HF, I am also involved in VHF and UHF, particularly 2 meters, and have recently gotten involved in packet radio (having gained some experience on the hardware end of setting up such a station).

- D -

Matthew A. (Matt) D Alessio KC6VIM

mattd@bransom.org -- send here first, please!
mdaless@ocf.berkeley.edu

I cannot claim to be an expert in any field, but I did participate in SAREX as the project coordinator for our school (The Branson School) in the STS-64 mission. I will be happy to help anybody else who is interested in any and all aspects of the SAREX project. I also know a little bit about UNIX administration, but I find myself asking questions more often than answering them.

I am a high school senior, so my real area of expertise is getting young people involved in ham radio. I was a speaker at the Dayton HamVention Youth Forum, and am active in recruiting in my local community.

I am the US National Coordinator for RAIAR, Radio Amateurs International Awards Registry, we have over 78,000 registered members and just over 2,500 general members, plus lifers and charters also.

RAIAR only deals with the VHF/UHF spectrum for its awards, plus SWL on all bands.

I am ready to help any interested individual obtain his Novice or Tech ticket, as well as teach him the ins and outs of VHF Packet.

Our radio club holds classes for those inclined to advance to General and above.

]

OWNER OF THE LAND-MOBILE-RADIO MAILING LIST

The purpose of this list is to allow discussion about commercial
land-mobile radio equipment, its use and maintenance.

OWNER OF THE MILITARY AFFILIATE RADIO SERVICE (MARS) MEMBERS MAILING LIST.

The purpose of this list is to allow discussion about MARS (Military
Affiliated Radio Service) activities. The list is open to all branches
of MARS.

To subscribe to or unsubscribe from either of the above lists, please
send electronic mail to:

listserv@stat.com

and include the command:

subscribe list-name

or

unsubscribe list-name

as the first line of your message, where list-name is either
land-mobile-radio or mars-list. An acknowledgement/welcome message
should follow very shortly.

MODERATOR OF REC.RADIO.INFO NEWSGROUP

Please direct all rec.radio.info submissions to
rec-radio-info@stat.com and all feedback and administrivia to
rec-radio-request@stat.com.

The UMARA is running a World-Wide Web hypertext page at:

http://w3eax.umd.edu/w3eax.html

Give it a try!

Scott Ehrlich WY1Z

Scott Ehrlich, Internetworking ASM, Eastern Mass. E-mail: wy1z@neu.edu
Boston ARC ftp archives: ftp://oak.oakland.edu/pub/hamradio/
Boston ARC Web page: http://www.acs.oakland.edu/barc.html
ARRL Web page: http://www.acs.oakland.edu/barc/arrl.html

I've played around with Mac and PC hardware, as well as dabbling a
little with DOS, UNIX, and MacOS.

I co-maintain the Boston Amateur Radio Club anonymous FTP file
archives with Phil Temples, K9HI (k9hi@netcom.com).

A sampling of the archives include:

A VIRTUALLY COMPLETE ARCHIVE OF ALL ARRL BULLETINS SINCE 1992 IS AVAILABLE
AT:

ftp://oak.oakland.edu/pub/hamradio/barc/w1aw-list/

A MIRROR OF ALL FILES AVAILABLE FROM THE ARRL INFO SERVER IS ALSO AVAILABLE:

ftp://oak.oakland.edu/pub/hamradio/arrl/infoserver/

THE ARRL INFOSERVER MIRROR HAS FCC PART 97 (U.S. AMATEUR RADIO SERVICE RULES
AND REGULATIONS) AT:

ftp://oak.oakland.edu/pub/hamradio/arrl/infoserver/rib/part97.txt

PROGRAMS MENTIONED IN QST ARE IN:

ftp://oak.oakland.edu/pub/hamradio/arrl/qst-binaries/

AMATEUR RADIO NEWSLINE IS NOW ALSO BEING ARCHIVED, TOO:

ftp://oak.oakland.edu/pub/hamradio/docs/newsline/

MACINTOSH AMATEUR RADIO SOFTWARE ARCHIVE:

ftp://oak.oakland.edu/pub/hamradio/mac/

HAM RADIO AND MORE, THE RADIO SHOW CARRIED LIVE EVERY SUNDAY (6PM - 7PM EST)
ON THE TALK AMERICA RADIO NETWORK, NOW HAS A WORLD WIDE WEB HOME PAGE:

http://www.acs.oakland.edu/barc/ham-more/ham-more.html

THE BOSTON AMATEUR RADIO CLUB ALSO HAS A WORLD WIDE WEB HOME PAGE:

http://www.acs.oakland.edu/barc.html

DUE TO THE POPULARITY OF THE KY1N VE LISTING AND W1GSL'S HAMFEST LIST, I HAVE INCORPORATED BOTH OF THESE LISTINGS INTO THE BOSTON AMATEUR RADIO CLUB'S WEB PAGE:

http://www.acs.oakland.edu/barc/ne-happenings.html

With the cooperation of the Boston Amateur Radio Club, I have put together a World-Wide Web page for the American Radio Relay League (ARRL).

Since the ARRL does not yet have web capabilities of their own, this page is being offered on the same site as the Boston Amateur Radio Club's web page.

THE ADDRESS TO ACCESS THE ARRL HOME PAGE IS:

http://www.acs.oakland.edu/barc/arrl.html

It has pointers to the ARRL Letter, E-mail addresses of HQ staff, official League bulletins, and much more!

You will need Lynx, WWW, or Mosaic to view them (or you may obtain a copy of the page via E-mail; send a message to listserv@info.cern.ch with the word

help

in the body for more information). Ask me for more details about this.

AX.25: N5OP@WA8ZIA

I'M THE TECHNICAL COORDINATOR FOR THE COLORADO SECTION.

* Areas of expertise:
+ RFI/EMI
+ Antennas
+ DX'ing
+ Contesting
+ HF propagation
+ CW

* Areas where I have enough knowledge to be dangerous:
+ Troubleshooting
+ Traffic Handling
+ Homebrewing and construction practices

Wayne Estes WD5FFH

Wayne_Estes@csg.mot.com

* Amateur Satellites
* Bicycle Mobile HF

I am most knowledgeable about analog satellites, but I would be
willing to answer questions about digital satellites and SAREX (I have
lots of reference information).

Robert S. French AC6GO

rfrench@cs.stanford.edu

http://hawg.stanford.edu/~rfrench/

The Stanford Amateur Radio Club, W6YX, will be taking over the
Ham-Univ Mailing List for College and University Amateur Radio Clubs,
effective immediately.

The new address will be: ham-univ@w6yx.stanford.edu

The old address at the New Jersey Institute of Technology will
continue to work for the time-being as a forwarder to the new address.

To subscribe or unsubscribe, send mail to:

ham-univ-request@w6yx.stanford.edu

with the body saying "subscribe" or "unsubscribe".

Current subscribers have been automatically added to the new mailing
list.

Please let ham-univ-owner@w6yx.stanford.edu know if there are any
problems.

Stanford Amateur Radio Club (W6YX) WWW Page is at:

http://w6yx.stanford.edu/

(Continued in next part.)

4217. Amateur Radio: Elmers List Quick-Search Index

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-06 00:00:00 UTC

QUICK-SEARCH INDEX BY SUBJECT

(Note: This index is not necessarily all-inclusive and some Elmers are
listed more than once.)

AMATEUR RADIO EMERGENCY SERVICE (ARES)/RADIO AMATEUR CIVIL EMERGENCY SERVICE
(RACES)

* Battles
* Chilton (EMA Radio Officer)
* Glago (Sonoma Valley, CA ARES and RACES Director)
* Humphries (ex-Asst. EC)
* Stader (EMAS SEC)

AMATEUR SATELLITE CORPORATION (AMSAT)

* Williamson, P (WWW Page, Anonymous FTP Archive, and Mailing Lists)
* Roth (Portland, OR Area Coordinator)

AMATEUR TELEPRINTER OVER RADIO (AMTOR)/PACKET TELEPRINTER OVER RADIO
(PACTOR)/RADIO TELETYPE (RTTY)

* Battles
* Sayer (also decoding CHU's ASCII time code)

AMERICA ON-LINE

* Ruh (ATV Quarterly Representative, Ham Radio Manufacturers and
Dealers Section)
* Stader (Host and Manager, Ham Radio Club Forum)

AMERICAN RADIO RELAY LEAGUE (ARRL)

* Battles (QST Features Editor, CT PIO)
* Bloom (QEX Editor, ARRL CNC Contact)
* Cebik (Educational Advisor)
* Cira (Los Angeles, CA ACC)
* Ehrlich (WWW Page, EMAS Internetworking ASM)
* Elmore (CO TC)
* Goldstein (Volunteer Counsel - Florida Only)

* Halle (Phoenix, AZ Area Official Observer Coordinator)
* Hare (Laboratory Manager)
* Hill (TN TS)
* Jahnke (VEC Manager)
* Lau (Technical Consultant)
* Redding (Educational Advisor)
* Sefranek (EMAS TA)
* Stader (EMAS ASM and DEC)
* Tracy (InfoServer Sysop, TIS Coordinator)
* Turner (Volunteer Counsel)

ANTENNAS

* Brewer (wire HF)
* Brubaker (HF)
* Cebik
* Coyle (multi-band wire HF)
* DePolo (Design/Theory)
* Elmore
* Graham (wire HF for apartments)
* Halbert (simple designs)
* Hieber (wire)
* Hill (Mobile, including HF)
* Humphries (VHF and multi-band wire arrays)
* Myers (and transmission lines)
* Ornitz (including computer modelling)
* Rymell
* Salnick
* Salyzyn
* Sefranek (and Transmission Lines)
* Silva
* Standerfer
* Stine (wire HF)
* Stockton
* Taylor
* van de Kerk (HF Low-Profile)
* Zurn (wire HF)

ANTIQUE AND OLDER EQUIPMENT

* Bellville
* Brewer (40's-70's)
* Hill (Mailing List)
* Keys (including HF and CW)
* Paperman (Manuals, Service Information, and Literature)
* Standerfer
* Turner (including Kenwood and Ten-Tec)

APPLE MACINTOSH COMPUTER

* Bellville
* Ehrlich (including Amateur Radio Software FTP Archive)

* Stader (List of Amateur Radio Software)

BATTERIES

* Myers
* Hammill (Sealed Lead-Acid)
* Sefranek (including Solar Operation)

BULLETIN-BOARD SYSTEMS (BBS'S)

* Bertolino (Trance - Italy)
* Cira (HAM*INFO*LINK*SOURCE*BBS)
* Gathergood (CQ Centre - United Kingdom)
* Leadmon (WB3FFV)
* Meredith (F6FBB Packet BBS Support)

CALLSIGN DATA/NATIONAL TECHNICAL INFORMATION SERVICE (NTIS)

* Carruth
* Lloyd (QRZ! Ham Radio CDROM and Callsign/E-mail Registry)

CIVIL AIR PATROL (CAP)

* Moore
* Standerfer

COLLEGE CLUBS

* DePolo (Technical Director, Univ. of Pennsylvania ARC)
* Edwards (Univ. of Maryland ARA)
* French, et al (Ham-Univ Mailing List)
* Hieber (IG-Funk, Univ. of Erlangen-Nuernberg, Germany)
* Madsen, et al (Iowa State Elmers)
* Schleck

COMMERCIAL EQUIPMENT

* Bellville
* DePolo
* Dodell (Mailing List)
* Veres (Commercial Radio through 12 GHz, UHF and 2.5 GHz ITFS TV)
* Wier (ICOM Mailing List)

CW (MORSE CODE)

* Bono (AutoCW)
* Elmore
* Hill (learning hints)
* Keys (including CWIST HF CW Net)
* Salyzyn
* Silva
* Stine
* Stockton
* van de Kerk
* Zurn (including European abbreviations)

DIGITAL SIGNAL PROCESSING (DSP)

* Bloom
* Bruhns
* Edwards
* Gilliver
* Hall (including WWW Page)
* van Vliet (Filters, including Integrated, Distributed, Lumped, and Active)

EQUIPMENT TESTING/TROUBLESHOOTING

* Brewer (Tube Gear)
* Bruhns (Low-Level/Low-Frequency Analog and Transmission Line Measurements)
* Coyle (Kenwood TS-830S and TS-940/AT Service)
* DePolo
* Elmore (Troubleshooting)
* Hare (ARRL Laboratory Manager)
* Lord (including Radio Doctor's WWW Page)
* Myers
* Ornitz (Instrumentation)
* Paperman (Manuals, Service Information, and Literature)
* Rymell (Electronics and Computer Service Work)
* Salnick
* Salyzyn
* Sefranek (including Power Supplies and Amplifiers)
* Standerfer (Test Equipment and Measurements)
* Stockton
* Taylor
* Veres (Commercial Radio through 12 GHz, UHF and 2.5 GHz ITFS TV)
* Witte (Instrumentation)

FREQUENTLY ASKED QUESTIONS (FAQ's)

* Adams (QRP Rig Standardized Info Sheets)
* Bowen (Supplemental FTP Archives, Internet Callbook Server)
* Cebik (QRP Periodicals, Electronics Books, and Antenna Books Lists)
* Cheeseman (Australia)
* Dodell (rec.radio.info Newsgroup)
* Ehrlich (World-Wide Web)
* Goldstein (Packet Radio WWW Server, including Packet FAQ)
* Hieber (QRP Clubs and QRP-L Mailing List)
* Hill (Antennas)
* Jahnke (VE Exams Scheduled)
* Lloyd (QRZ! Callsign/E-mail Registry)
* Nobody (General)
* Ruh (Amateur Television)
* Stader (Macintosh Amateur Radio Software)
* Turvey (United Kingdom)
* Williams (Amateur Radio WWW Server)
* Woods (Mail-Order Electronics)

* Yee (Online Repeater Directory)

GEORGIA RADIO AMATEUR PACKET ENTHUSIASTS SOCIETY (GRAPES)

* Coffman (E-mail Contact)
* Merritt (WWW Page)

HANDICAPPED OPERATING

* Gilliver (Blind Issues)
* Madsen, et al

HIGH FREQUENCY (HF)/CONTESTING/DX

* Battles
* Bertolino (425 DX News and IOTA WWW Page)
* Brubaker
* Chilton
* Coyle (including Station Setup for New Hams)
* DePolo
* Elmore (DX'ing, Contesting, and Propagation)
* Gilbert
* Hill (Mobile)
* Madsen, et al
* Nerenberg (DX Mailing List)
* Salnick
* Silva
* Simpson (Best of 75 Net)
* Tidd (DXCC Databases)
* van de Kerk (CW, Low Profile)
* Veres
* Zurn

HOMEBREWING/DO-IT-YOURSELF

* Bruhns (including Low-Level/ Low-Frequency Analog, DSP, Surface Mounting, and Transmission Lines)
* Carruth (Digital Design, Software)
* Chilton
* DePolo
* Edwards (including DSP)
* Elmore (Construction Practices)
* Gilliver (DSP, Blind Issues)
* Halbert (QRP)
* Hall (including DSP WWW Page)
* Keys (Junk Box projects, National Electrical Code for Hams)
* Kohnen (Tubes)
* Lau (Transverters, VHF/UHF, Filters, repeatable projects)
* Myers (Transmission Lines, Analog and Digital Design)
* Ornitz (Chemical and Toxic Material Use and Handling)
* Rymell (Electronics and Computers, Low-Cost projects)
* Salyzyn
* Sayer (Class-C Bipolar Amplifiers and Phased-Lock-Loop Circuits)

* Sefranek (Amplifiers, Battery/Solar Operation, Power Supplies, and Repeaters)
* Silva (Analog, Digital, Tubes, Semiconductors, RF, Finding Parts)
* Stine (Tube Amplifiers, Receivers, and Exciters)
* Stockton (including QRP)
* Taylor (Tubes and Amplifiers)
* van Vliet (including Power Amplifiers, Low-Noise Amplifiers, and Mixers for Microwave)
* Woods (Mail Order Electronics)

IBM PERSONAL COMPUTER (PC) AND CLONES

Lyndon Nerenberg VE7TCP, VE6BBM

lyndon@ve6tcp.ampr.org

I'm heavily involved in Internet Protocol (IP) networking over packet,
as well as system administration of UNIX and UNIX-like operating
systems (with an emphasis on networking, E-mail, etc.).

MAINTAINER OF THE INTERNET DX MAILING LIST

To subscribe, send an E-mail request to:

dx-REQUEST@ve7tcp.ampr.org

with the following line in the message body:

subscribe dx

I also maintain an amateur radio related WWW page at:

http://ve7tcp.ampr.org/

It focuses primarily on Contesting, DXing, and technical matters.

Bob Nielsen W6SWE

Bob Nielsen, W6SWE Internet: w6swe@tapr.org
Tucson, AZ AMPRnet: w6swe@w6swe.ampr.org
[44.124.12.16] AX.25: W6SWE@WB7TLS.AZ.USA.NA

TUSCON AMATEUR PACKET RADIO (TAPR)

I am no longer a TAPR officer, but try to help out with the TAPR file
server and am the "official" contact person on the Internet and
CompuServe (71540,2364).

To access the TAPR file server, send E-mail to:

file-request@tapr.org

To get the help file and a list of available files, send the following commands in the body of the message:

help
dir
quit

All mail sent to that address is not read by a human. Conversely, mail sent to tapr@tapr.org is read by a human who will be glad to take your orders or process membership applications, but cannot send you file server files.

Joe Nobody N0CALL

nobody@nowhere.nodomain

REC.RADIO.AMATEUR.MISC FREQUENTLY ASKED QUESTIONS (FAQ)

Available from:

* http://www.smartpages.com/faqs/radio/ham-radio/faq/top.html
* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/faq/
* ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq/

Currently the posting of these articles have been suspended indefinitely (and will probably be removed from the above sites shortly). New editors are being actively sought to take over maintenance of the above resources and keep them from disappearing from the net permanently. As with any volunteer effort, new volunteers are often needed. We need new editors to post the above FAQ's. Preferably this should be someone who has enthusiasm for hobbyist radio, experience with Usenet, and the ability to work with the other editors. No single person can know all the various aspects of these diverse hobbies so the editorial review groups are intended to make a greater combination of experience. A new maintainer is desired at this time to provide a fresh outlook as well as the opportunity to train new volunteers and avoid overreliance on a small group of people.

The FAQ's were posted with the auto-faq software, which is written in Perl (see Paul Schleck's entry). So it would be a plus for volunteers to post the FAQ to have Perl installed on their system and be able to use "cron" or "at" so that postings can go unattended.

With widespread net acceptance and use of the World-Wide Web, it might be desirable to rewrite the FAQ as a minimal "pointer" article with URL links. Such a minimal FAQ would reduce maintenance burdens, ward off criticism of the document for being "too big," and could be maintained as Hypertext Markup Language (HTML) at a WWW site, then "dumped" to an ASCII file for posting to news (to cover users who don't use WWW, as well as to actually feed a couple of automated FTP,

Gopher, and WWW sites. Such an approach is used for the Elmers list; see the companion posting to this file, "Amateur Radio: Elmers List Info and Administrivia" for more information).

Anyone who wants to make their contribution to the Net as a volunteer should contact the Elmers Directory maintainer at elmers-request@gonix.com.

(W) +1 713 770-1836 (6:30am to 3:30pm Central Time)

I have a collection of service information and literature dating back to the 1920's. I will be happy to assist those needing copies of out-of-copyright information for specific makes and models of receivers, transmitters, test equipment, etc..

The collection spans commercial, amateur, and military surplus gear of all types. Unfortunately I have not taken the time to catalog all this information, but it is logically filed by make, model, etc.

If you need service information for a specific piece of equipment, (and I have the information in my collection) I will research and copy it for you. Cost will vary depending on the time required to find the information and the amount of pages to be copied. I estimate 10 pages or less at $1.00/page including US postage. I will quote on larger manuals.

This is NOT my career or a business. Any requests must be prepaid or I will ship COD at additional postage costs.

Bruce Perens AB6YM

perens@hams.com

MAINTAINER OF LINUX FOR HAMS CDROM

What Is Linux for Hams?

Linux for Hams is a full-featured Linux system with special additions for Amateur Radio. The system includes all of the sophisticated software that one would expect on one of today's engineering workstations, along with software for packet radio communication, electronic design, printed-circuit manufacture, a database of FCC rules and license exams, a code-practice program, and other Amateur Radio applications.

The general-purpose software includes software for connecting to the Internet, compilers for the C and C++ languages, a full-featured typesetting system, a symbolic mathematics program, CDROM authoring tools, and many other programs. Unlike other Amateur Radio software collections, Linux for Hams is an integrated system. The programs are already compiled and configured to work together with the rest of the system.

Linux for Hams is being built by Bruce Perens AB6YM, with the help of several volunteers. Of course, it builds on the work of the thousands of volunteers who helped create Linux and the other programs it contains.

The system will be available for free if you download it using FTP. A low-cost CD will be available, for about $30.

FREE CDROM SUBSCRIPTION FOR VOLUNTEERS

Most of the software in Linux for Hams is free software, contributed by its author for anyone to use. I would like to compensate those authors for their work. If you are the author of a significant piece of software included in Linux for Hams, please E-mail to Perens@Rahul.net. You may be be able to get a free CDROM subscription to Linux for Hams.

Bruce Perens AB6YM reserves the right to decide who gets free subscriptions, what is included in a free subscription, and for how long those subscriptions last.

For more information about Linux for Hams, check out the WWW page:

http://www.hams.com/perens/LinuxForHams

or send E-mail with the word "help" to:

AMSAT-NA LIFE MEMBER #2109

I am the AMSAT coordinator for the Portland, Oregon area and I do a lot of the "Elmering" in this area as well as steering people toward others.

This would be for satellites only, as I am not doing HF anymore.

I am currently set up for all of the digital and analog satellites, all modes including AO-13 Mode S and weather sats.

I would be happy to assist people with getting started and beyond in all areas of satellite operations.

Henry Ruh KB9FO

atvq@aol.com

AMATEUR TELEVISION QUARTERLY (ATVQ) MAGAZINE

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions

(FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can try to answer questions on here, and frequently do, but time is expensive and limited!

John Rymell N3PFF

ryme@husky.bloomu.edu
Bloomsburg University
Bloomsburg, PA

Over 25 years in electronic/computer service work. Enjoy designing, building and operating vacuum tube and solid state equipment. Experienced in wire antenna and tuners, SWL, and Amateur Radio. Have real enthusiasm for building just about anything from next to nothing (:^)! Glad to help those in need.

I can help people with HF stuff, cheap antennas, and am willing to help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/ understanding at the burn-your-hand-with-a-soldering-iron level - is drifting out of ham radio. With Japanese radios which cost so much, fewer and fewer hams are willing to risk their warranty to service their own equipment. I would like to see a turn-around here...

I'm certainly willing to be an Elmer if there's a need. I hope I've learned a few things since 1966 when I first went on the air. :-) Here's a list of subjects I might be able to help with:

* Combining amateur radio and flying
* Antennas
* Civil Air Patrol
* General Operating Practices
* Older (Tube) Equipment
* Test Equipment and Measurements

Dave Stine WA2JTA/6

dstine@cisco.com

My areas of expertise are:

* vacuum tube amps, receivers, exciters
* CW operating tips
* wire antenna tips, hints & kinks

David Stockton GM4ZNX

dstock@hpsqf.sqf.hp.com

* SWL since 1960
* Licensed since 1984 (UK full class A)
* Degrees in electronics&comms and digital techniques etc.
* Currently senior design engineer doing RF design

* Fairly broad interest in amateur radio (but not contests!)

* Antennas, Transmission lines,filters from fundamental theory to
practice
* Receiver structures and circuits from simple to state of the art.
* Transmitters, ATUs
* Test equipment
* Wide experience of troubleshooting/repairing equipment.
* Professional experience of EMC/RFI
* QRP
* UK Operation and Licensing

* My morse is flaky, but I keep working on it
* No interest in contests
* No interest in packet radio or in fixing computers

Just wrote the new oscillator and synthesiser chapter for the 1995
ARRL Handbook. Also co-developed (with G3ROO) a robust phase-locked
summing loop circuit to replace the common mixer-filter LO frequency
adder. A technical article describing the project was recently
published in RADCOM.

ARRL TECHNICAL INFORMATION SERVICE COORDINATOR (TIS@ARRL.ORG)

ARRL E-MAIL INFORMATION SERVER SYSOP (INFO@ARRL.ORG)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many amateur radio informational documents are also available from the ARRL E-Mail Information Server (or Info-Server for short). To find out how to use the Info-Server, send E-mail to info@arrl.org with any subject (it is ignored) and the following text in the body of the message:

==========

This message does not constitute any official or unofficial statement or policy of American Turnkey or any other organization, corporation or institution.

I just upgraded to Advanced, and am now working on Extra. Was first licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when the baby is asleep, so the XYL demands silent running. Besides, with my wimpy wire, there is little point in trying to run voice.

Jim Walsh W7LVN

jwalsh@efn.org

Quarter Century Wireless Association, Inc. (QCWA), headquartered in Eugene, OR, is pleased to announce the QCWA World Wide Web Home Page, available by either text or graphics browser at:

http://www.efn.org/~qcwa/

Membership in QCWA, a not-for-profit 501(c)(3) corporation, is open to any radio amateur licensed today AND also licensed 25 years or more ago (there is NO REQUIREMENT for continuous licensing over this time period -- if you received your first ham license on or before January 1, 1970, you're now eligible). Included on the Web page are:

* Photos, biographies, addresses and phone numbers of QCWA 1995-1996 Officers and Directors
* Database of local Chapters (nearly 200, worldwide), including name, address, and callsign of Chapter Secretary
* Listing of on-the-air Chapter meetings
* Details of upcoming National Convention -- with photos, as soon as we receive them
* A few words about the quarterly QCWA Journal (we hope soon to have excerpts from Editor Barry Wiseman's new, improved Journal available to you on the Web)
* Rules and schedule for QCWA Phone and CW QSO Parties
* QCWA Memorial Scholarship Program

* Criteria for and recent winners of QCWA Awards
* A Photo Tour of QCWA Headquarters and W2MM/7 memorial station
(soon to display a spiffy new IC-738 . . . THANK YOU, ICOM!)
* Links to other interesting ham-related Web sites

Please visit QCWA on the Web . . . and take a moment to E-mail me with your comments, corrections, and suggestions at my E-mail address above. If you administer a ham-related Web site, QCWA would appreciate a Link from your page. We're 12,000-strong -- worldwide -- and growing! Come join us!

AMSAT-NA (the Radio Amateur Satellite Corporation in North America)
operates the Internet host AMSAT.ORG to provide for efficient
communications between people interested in the amateur satellite
program. At this time two services are provided: a message remailing
service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive
access to a variety of information related to the amateur radio
satellite program. Use your Web browser program (e.g., Mosaic) to
access the URL:

http://www.amsat.org/amsat/AmsatHome.html

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server.
In addition, various files and programs are available for anonymous
FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT NEWS SERVICE

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT BULLETIN BOARD

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - KEPLERIAN ELEMENTS MAILING LIST

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA RELATED INFORMATION MAILING LIST

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - SHUTTLE AMATEUR RADIO EXPERIMENT MAILING LIST

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have

the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

Conway Yee N2JWQ

yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

MAINTAINER OF THE UNIVERSAL AND FREE LISTING OF REPEATERS FOR RADIO AMATEURS

This listing with all the data is available for anonymous FTP from:

ftp://mipgsun.mipg.upenn.edu/pub/yee/rptr010.Z

An experimental search and submission front-end is available at:

http://www.acs.ncsu.edu/scripts/HamRadio/repeaterdb.perl

As far as I am aware, all the data is freely redistributable and my
intent is to make sure it stays that way. For this reason, I have
applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and is
not limited to the US. This reflects the intent to make this directory
universal.

Contributions of data may be made by anonymous ftp to:

ftp://mipgsun.mipg.upenn.edu/pub/yee/uploads/

or via E-mail to yee@mipg.upenn.edu

The data format has not been changed from the old format so
contributions that you were planning to make (prior to my recent
troubles) are still current and most welcome. This repeater listing
will be of use if people take an active part in making it accurate and
useful.

> And how he treats ARRL employees.

OK that's it...
(For the explitive-deleted challenged people, hit "n" now.)

Burt, go fuck yourself.
That should solve you ham-sex problem.

I talked with Rick Palm this weekend at the ARRL convention. And I
have talked with him on the phone several times. Every time I have had
a question it has been delt with properly. I don't ask the league
people to explain the personell changes.

I've corresponded with both Luck Hurder and Jim Kearman in the past.
Neither one of them is at the ARRL HQ anymore. So what? Luck ran
afoul of the politics, and Jim threw in the towel. That will happen in
any organization. Especially one the size of the ARRL.

If the Germans, other HAMS and everyone else bothers you that much, do
youself (and the rest of us) a favor and kill yourself. I doubt that
many people here will miss you.

To the rest of the newsgroup; sorry.
To the language whiners. This is usenet, not Romper Room. (although
from the way pople like Burt act, I wonder at times.)

After 3 months of waiting for pay and then being told, "ooops we sent your check to the wrong address and it came back" when I called them on the matter I decided that there were other and better markets out there too. I have heard the same tale of woe personally from others too, so it is easy to see why such an article could show up, I guess "Uncle Wayne" is scratching the dirt for stuff to fill his rag up with.

The IC-22S is diode matrix programmed. It's the IC-22A which is
crystal controlled. The latter is a good packet rig. The IC-22S
only covers 146-148 MHz, so using it around 145.01 MHz for packet
can be a problem. You'll have to modify it for the lower band
segment. I wouldn't pay much at all for a IC-22S. I'd pay a bit
more for the earlier IC-22A, perhaps as much as $50.

>to frequency splits? Thanks for any info here or to: stevew7azf@aol.com

Depending on the combo number for the unit, all that may be necessary
is just peaking it up. It sounds like you have one that needs the
capacitor changes though. There are 3 different GE setups, and the
one intended for the high end of the commercial band won't go down
to the ham band without capacitor changes. The other two will.

>whether the pedants like it or not!

Ten-four good buddy!

(What's really shocking is that Brian, as an Extra class licensee, presumably knew the correct answer to this question at one time. Oh well, I *suppose* 45 isn't quite too young for early senility to set it.

The correct answer, of course, is that Morse code is a form of amplitude modulation, though if you want to get fussy you could also label it a variation of pulse-width modulation.)

KENWOOD LAUNCH NEW HF RADIO!

Kenwood have just introduced their new HF Transceiver, the TS870s! which
replaces the TS850s and TS850sat.

By far the greatest change is that the new radio has a fully digital signal
path. All filtering, both in terms of width and noise reduction, is
acheived
digitally, so there are no optional analogue filters!

Also built in as standard are a K1 logikeyer for the dedicated cw operator,
an auto atu which covers both tx and rx, plus an RS-232 adaptor internally.

Kenwood may also be able to supply a windows based control program in the
near future.

TS 870S SPECIFICATION.

By applying the best of it's DSP technology, Kenwood has succeeded in
developing the TS870S, a new gerneration of HF SSB transceiver that offers
superior digital interference reduction as well as receiver performance of
a quality hitherto impossible using the conventional analogue circuitry.
New HF transceivers based on this design concept are collectively called
the "Intelligent Enhanced Communications System". (AA1)

MAIN FEATURES:
HF DSP for post-IF signal processing:
Digital RX Filters: The TS870s features post-IF digital filters for ALL
modes - SSB,CW, AM, FSK and FM, a World first!! offering precise
performance that is unobtainable with analogue circuits.
Bandwidth of the digital filters can be optimised in various working

conditions. You are now also free from struggling to put in the optional IF filters, thanks to the new razor sharp digital filters.

SSB MODE:
Hi Cut: 1.4 - 6.00khz (12 steps)
Low cut: 0 - 1000hz (10 steps)
CW MODE:
VBT: 50 - 1000hz (6 steps)
SHIFT: 400 - 1000hz (13 steps)
FM MODE:
VBT: 5 - 14khz (6 steps)
AM MODE:
Hi Cut: 2.5 - 7khz (6 steps)
Low Cut: 0 - 500hz (4 steps)
FSK MODE:
VBT: 250 - 1500hz (4 steps)

NOISE REDUCTION:

The TS870S is capable of picking out a target signal that is buried in the noise. To accomplish this, it employs the line enhancer method for ssb mode and the SPAC method for cw mode.

BEAT CANCEL:
This cancels out the sort of multiple beat interference that can effect reception automatically, which is impossible for analogue circuits.

IF AUTO NOTCH:
This is a filter which, when beat interference is experienced, attenuates only the interfering signal. Should the frequency change, the filter adjusts automatically.
Thanks to the post-IF DSP, it offers more precise performance than previously possible.

SELECTABLE TX AUDIO QUALITY & Characteristics:
3 types of adjustments are possible:

TX ADJUSTMENT:

In SSB and AM Modes, the bandwidth of the bandpass filter can be controlled.

BAND DIVISION SPEECH PROCESSOR:
The speech processor can be adjusted seperately for low, medium and high ranges.

TX EQUALISERS:
Equipped with 3 equalisers, high boost, bass boost and comb filter, the TS870S allows the user to select the desired sound quality.

DSP SIGNAL DETECTION:
Thanks to DSP Technology, the quality of signal detection is better than

possible with conventional transceivers, in terms of both low distortion
and high sound quality.

ATU that works on both RX and TX!!!!
Special CW features:
4 Channel Memory in built.....based on the K1 Logikey*tm:
2 Key Connectors!
CW Pitch control between 400 & 1000hz in 50hz steps!

NEW DRU-3 DIGITAL RECORDING UNIT:
By adding the DRU-3 unit, up to 60 seconds of continuous digital recording
is possible!

There are many more features on this new excellent radio.....contact your
Authorised Kenwood dealer for the full specification sheets.:
de GJ4ICD.

The RS HTX-212 (2m mobile) is on sale locally, and some of us are
thinking of purchasing, since the price is good.

We're looking for comments from anyone who has had an opportunity to
use one for a while. Notably...
- intermod; how well do they reject spurious frequencies?
- how well do they operate? (ease of use of controls etc)
- any flaws that have been noticed?

Thanks in advance for responses
Gerry

** Weekly Posting **

The QRZ Callsign/Email Registry Now contains over 7500 callsign-to-email address listings and continues to grow daily.

We have a WWW page where you can input your e-mail address directly into the QRZ Callsign Database, where it will be published on both CDROM and on the internet. When you use this page, your email-address is made instantly available to the online database.

Everyone is encouraged to check in and add their e-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and e-mail address.

The URL is:

http://www.qrz.com/email.html

If you don't have WWW access, send an email to updates@qrz.com with the one-line message:

To: updates@qrz.com

qrz_email YourCallsign YourEmailAddress

E-mail submissions will be sent an automated reply.

Register your e-mail address today!

In my defense, I suggested a 0.02 fix on a $20. rig.

If you want a 25-year-old military surplus rig to work like a $900 1995 rig, you can do it. But it's going to cost more than $900 if you figure your time as worth more than minimum wage.

A speech processor (properly adjusted) is useful on any rig. There's no telling what condition the existing audio shaping circuitry is in on a surplus rig that's old enough to vote. Getting the deviation down to where the rig can be heard and understood on the air is the first step. Better receiver filtering is esssential as well -- but you can buy a superior one-chip FM receiver from Moto for $3. Do you want to go through a varnish-laden IF chain to get a couple more dB when you can go to Radio Shack and buy 20 dB and a hamburger for $5?

I am a strong proponent of CHEAP test lash-ups that provide a go/no-go initial test on surplus gear. It saddens me when people spend hundreds of dollars testing and tweaking a tin-can radio when they could have put a nickel bandaid on it, had some fun, and put the money toward a nice rig -- either a modern rig or a classic that's worth the time and money.

BTW, is there any place in the country where there's enough 6 meter traffic for adjacent-channel rejection to be a factor?

You can go to customs *before* you leave and get a form for each peice of equipment you might carry with you. Just stop by the US customs office at any international airport, ship port or boarder crossing and ask for the form for personnel equipment to be taken overseas (out of country). You will need the equipment you want these forms for with you. I keep mine in my vehicle just incase I end up there on a weekend trip (I live about 3 hours south of the boarder.
Good Luck

I did nearly 100% of the illustrations in 73 as a freelancer in St. Louis (and later in NH) for over three years in the late 60's, and never once waited for payment. It was always immediately by return mail. I know Wayne personally; I was his house guest for seveal weeks when I later moved to NH, and I can't imagine having a finer host. Although I've lost track of him in recent years, this doesn't sound like the Wayne Green I used to know. Maybe he just doesn't have the money, and is struggling to keep 73 alive; a lot of people would miss it, I think.

Wayne is eccentric as hell, and possibly in over his head, but I don't see him as a crook.

There is nothing illegal in the scenario that Mike described, unless it is their regular way of doing business. Occasional use no longer violates the law, as of the last rules change. You can order pizza, too.

The issue of whether a repeater operator will allow DTMF tones to pass is also a red herring. The operator of a repeater sponsored by a club really has no choice, as the membership will demand that capability for DTMF paging on their handhelds. It is not much of a secret that the pound sign enables DTMF pass-thru, at least on ACC series controllers.

As to the repeater owner/trustee allowing such use, you said yourself that there is no way that they could know of it. There are enough things wrong with my repeater that I know about; I'm not going to worry about things I cannot detect.

Alan -

Sounds like we're not going to agree on much here. The scenario I presented, where the supervisor accessed his employee's pager, is clearly illegal under 97.113(a)(3) - it's communications on behalf of an employer. This situation was not relieved in the rule change. I'm an OO, so it's a point to know this sort of thing.

<<repeater operator will allow...red herring>>

Maybe where you live. "Throwing tones" in our neck of the woods will more than likely get you a phone call from a control op if not the trustee or club president. Do it twice and you'll likely get your patch privileges yanked.

As far as repeater policy being decided by the membership, my personal experience in several clubs is that the trustee (whose legal butt is technically on the line) has final say-so on policy. Obviously if he/she bucks the wishes of the membership for very long there will be a "change" in the following election, but more often than not any controversy about policy originates from a vocal minority unable to change the outcome.

Actually, it sounds to me like the root of our disagreement is a big difference in the relative scale of problems we have to deal with. Ours are probably pretty trivial compared to what you have to deal with in the LA area, and I s'pose by "micromanaging" our repeaters among a still relatively disciplined user base we can continue to keep our problems small.

Agreed. I have a Mastr II repeater in 443 which was converted from a service on 451 with no problems, although the slugs on a couple of the helicals are just about at the end of their travel range.

I will add that the tune-up process is unusually critical for the Mastr Pro's - small changes in some of the adjustments will make huge performance differences. So make sure that you're careful with the tweaking and that you do it in the sequence prescribed in the service manual.

Also, be sure to have a spectrum analyzer handy - "tuning for maximum smoke" can result in some nasty spurs if you're not careful.
...mm

SOLAR TERRESTRIAL DISPATCH

PROUDLY ANNOUNCES THE RELEASE OF

```
------------------------
| S K Y C O M P R O |--
|-----------------------| |
| Version 2.0 | |
|_____________________| |
|_____________________|
```

Adding New Dimensions to Radio Propagation

NEW low PRICES: $70.00 to $125.00 USD (see below)!

SKYCOM PRO is one of the most powerful High Frequency (HF) radio propagation packages available. Here are some of the powerful new features:

*** COMPREHENSIVE RAY-TRACING NOW INCLUDES EFFECTS OF THE EARTH'S MAGNETIC FIELD AND COLLISIONS!
This is a major step forward for radio enthusiasts!

*** RAY TRACE ORDINARY AND/OR EXTRAORDINARY RAYS!
Observe how signals split into the ordinary and extraordinary components and how they each travel independent paths through the ionosphere.

*** SOPHISTICATED TWO OR *THREE* DIMENSIONAL RAY-TRACING OF RADIO SIGNALS THROUGH THE IONOSPHERE!
SKYCOM PRO Version 2.0 now has the ability to trace signals through the ionosphere in THREE DIMENSIONS using a powerful rotatable three-dimensional grid.

*** TRACE RAYS THROUGH TILTED REGIONS OF THE IONOSPHERE!
When signals pass through regions where the ionosphere is tilted, they are refracted away from the expected great-circle paths (often very substantially). Tilts can also result in chordal-hop propagation where signals may travel great distances within the ionosphere without experiencing great attenuation. SKYCOM PRO will accurately trace signals (ordinary and extraordinary components) through tilted regions of the ionosphere, precisely showing you how far signals are deviated and where they hit the ground.

*** ACCURATE COMPUTATION OF ATTENUATING IONOSPHERIC DEVIATIVE AND NON-DEVIATIVE ABSORPTION.

*** COMPUTATION OF RADIO SIGNAL FIELD STRENGTHS.
The new ray-tracing features of SKYCOM PRO now include the direct computation of radio signal field strengths (as opposed to signal "qualities") in units of dB above 1 microvolt (dBu or dB above 1 uV).

*** CONSTRUCT BROADCAST COVERAGE MAPS USING RESULTS OF THE NEW COMPREHENSIVE RAY-TRACING FUNCTIONS.
SKYCOM PRO comes equipped with an all-new utility to read the comprehensive ray-tracing results and produce fully-contoured maps of the following important quantities:

- Signal Strength (dBu).
- Ray elevation angles at the ground.
- Propagation delays (milliseconds)
- Locations where rays (ordinary or extraordinary) reach the ground.

*** TRACINGS NOW INCLUDE THE DIFFERING ABSORBING EFFECTS OF RAYS WHICH ARE REFLECTED FROM THE GROUND (DRY EARTH), THE OCEANS, AND ICE CAPS.
Signals which are reflected by the ground are attenuated to an extent that is dependent on the characteristics of the ground. For example, signals are reflected with relative ease from the oceans but are attenuated more extensively if reflected from dry ground. SKYCOM PRO attempts to handle these different reflection conditions by referencing an earth/ocean/ice geographical database.

*** PRODUCE 24-HOURLY GRAPHS OF MAXIMUM USABLE FREQUENCIES ALONG ANY PATH.
Users can now more easily determine what times of the day may support higher frequency radio propagation. It is based on ray-tracing results and is therefore slower but more accurate than the empirical methods employed by other propagation software.

*** DEFINE THE TRANSMITTER ANTENNA RADIATION PATTERN.
SKYCOM PRO will examine antenna radiation patterns when comprehensively tracing rays through the ionosphere. Resulting signal strength values therefore include effects of antenna gain at defined radiation azimuths and angles of elevation.

*** SKYCOM PRO INCLUDES APPROPRIATE DATA FOR MANY DIFFERENT TYPES OF ANTENNAS.
SKYCOM PRO includes the following built-in antennas:
- Simple long-wire
- Sloping V
- Inverted L
- Omni-directional
- Multi-band Tropical Arrays
- Multi-band Aperiodic Reflector Arrays
- Yagis
- Quadrants
- Dipole Arrays
- Log-Periodic Arrays
- Rhombics

- Monopoles
- Curtain Array
And of course, you can create your own antenna radiation patterns.

*** COMPREHENSIVELY RAY-TRACE SIGNALS THROUGH THE IONOSPHERE USING A VARIETY OF SELECTABLE STANDARD MODELS.
SKYCOM PRO comes equipped with FIVE available standard ray-tracing models, THREE standard models of the Earth's magnetic field, THREE standard electron collision frequency models, FOUR standard models of electron density, and TWO ray-tracing integration techniques.

*** SKYCOM PRO REMAINS VERY EASY TO USE AND UNDERSTAND.
Our Users Manual has been substantially enlarged to explain in detail how to use the new features of SKYCOM PRO.

*** SKYCOM PRO CONTAINS AN EXTENSIVE CONTEXT-SENSITIVE HELP SYSTEM
Press F1 for help at any of the prompts.

*** DETAILED NUMERICAL RESULTS OF COMPRENSIVE RAY-TRACINGS CAN BE PRODUCED.
- Ground Range of the Ray.
- Lateral Deviation of the Ray measured as the change in bearing from the transmitter.
- Lateral Deviation of the Ray measured as the change of bearing at the Ray location itself.
- Elevation angle of the Ray measured from the transmitter.
- Elevation angle (or inclination) of the Ray itself measured from the horizontal.
- The polarization of the ray (including both the real and imaginary parts of the polarization).
- The Group Path.
- The Phase Path.
- Ionospheric Absorption (deviative and non-deviative).
- Change of frequency (or Doppler shift) if encountered.
- Total traversed geometrical Path Length.

*** DEFINE THE ALTITUDE OF THE TRANSMITTER ABOVE THE SURFACE OF THE EARTH FOR THREE-DIMENSIONAL RAY-TRACING.

SKYCOM PRO includes all of the other features which complemented previous versions of SKYCOM. Unless otherwise stated, most of the features listed below do not yet make use of the new comprehensive ray-tracing features, but use the simpler and faster ray-tracing methods previously employed to derive their results. A few of the more significant features include:

* PERFORM FULL HF OR VHF SPECTRUM ANALYSIS
* Study the effects of Sporadic-E on radio signals.
* Generate Oblique Ionograms between any two locations.
* Simultaneously observe changes in the electron density as the signals are traced and refracted from one point to another.
* Examine the effects of signal convergence and divergence caused by ionospheric refraction.

* Directly print-out any of the many available graphic screens produced by SKYCOM on your printer. This feature is supported in all of the new comprehensive ray-tracing functions and features of SKYCOM PRO.
* Estimate effects of solar flares (minor or major) on the ionosphere and signals traversing the daylit sides of the influenced ionosphere.
* Determine the total distance traversed inside or outside the ionosphere.
* Examine the effects on transpolar or transauroral circuits (that is, those signal paths that cross into or through the auroral zones or polar regions where significant signal degradation can occur).
* Determine the total distance traversed by signals inside the influential auroral zones. A dynamic model of the auroral zones is employed.
* Determine optimum azimuths and elevation angles for transmitting or receiving to/from any area of the world.
* Determine ray-traced Maximum Usable Frequencies for practically any path.
* Change the colors used by SKYCOM's menu and text to anything you desire.
* PRODUCE IN-DEPTH COMPLEX GLOBAL MAPS OF IONOSPHERIC CHARACTERISTICS
The range of constructable maps include:
- Maximum Usable Frequencies for any time of day.
- M-factors for 3000 km distances.
- Critical E or F2 layer frequencies.
- Solar zenith angles (elevation of the Sun).
- Maximum height of the F2 layer.
- Transverse CROSS-SECTIONS of the ionosphere for any path.
- geomagnetic DIP or inclination angles throughout the world.
- Total Field Intensity of the geomagnetic field.
- Magnetic Latitude or Modified DIP angles.
* SELECT TRANSMITTER & RECEIVER LOCATIONS FROM OUR GEOGRAPHICAL DATABASE OR ADD YOUR OWN LOCATIONS TO THE DATABASE.
* YOU CAN EVEN SELECT GEOGRAPHICAL LOCATIONS BY TYPING IN GRID-SQUARE DESIGNATIONS. FOR EXAMPLE, "DO19", OR "QF10", OR EVEN THE MORE ACCURATE EXTENDED DESIGNATIONS "DN34UH" ARE SUCCESSFULLY TRANSLATED.
* Rigorously compute the FOT, or Frequency of Optimum Transmission, ensuring at least 85% of the transmitted power is reflected by the ionosphere.
* COMBINE MAPS OF DIFFERING TYPES

SKYCOM PRO Version 2.0 is a user-friendly, sophisticated and extraordinarily powerful software package. If you have any questions, or require additional specific information, contact Cary Oler: Oler@Solar.Uleth.CA, or Oler@Uleth.CA, or COler@Solar.Stanford.Edu. Alternatively, write to us at our address below, FAX us at: 403-756-3008, or leave us a message at: 403-756-2386.

Contact Oler@Solar.Uleth.CA or COler@Solar.Stanford.Edu for a comparative analysis of features between SKYCOM PRO and five popular HF propagation programs.

REQUIRED SKYCOM PRO INPUTS:

- Date and time.
- Geographical location(s) (latitude and longitude values).
- Sunspot number or 10.7 cm solar radio flux value (available from WWV or WWVH noted below). Or, values can be derived through our BCAST software (below).

OPTIONAL SKYCOM INPUTS:

- Geomagnetic A-Index (available from radio stations WWV or WWVH at 2.5, 5, 10, 15, or 20 MHz at 18 minutes past each hour).
- Location and magnitude of sporadic-E activity (available from our daily ionospheric summaries on the Internet or on computer BBS).
- Magnitude of solar flare activity for SWF analysis (again, available through our daily solar summaries on the Internet or on our computer BBS).
- Transmitter power (in Watts).
- Transmitting Antenna Radiation Pattern.
- Magnitude of polar cap absorption (if present, can be determined from our daily solar summaries on the Internet or on our computer BBS).

SKYCOM SYSTEM REQUIREMENTS:

- IBM or compatible computer system. Systems with 386 or better processors are highly recommended, but not required. Will operate fine on older computers, but more slowly.
- Math Coprocessor strongly recommended, but not mandatory. 486 or better microprocessors have built-in math coprocessors.
- MSDOS 3.3 or higher. Under the configurations we have tested, SKYCOM appears to work under the DOS mode of Windows 95. However, it has not yet been extensively tested under that new system.
- VGA graphics capabilities required. All graphics are VGA quality.
- At least 540 K of available free memory.

SKYCOM SOFTWARE PRICING INFORMATION:

Appropriate order forms have been appended below. Consult the order forms for specific pricing information.

SPECIAL BULK-PURCHASE DISCOUNT

Bulk purchases of SKYCOM PRO at discounted rates can be requested provided at least three SKYCOM PRO packages are requested per bulk order. The regular rate of $110.00 USD applies for less than three orders. For three or more orders, SKYCOM PRO is priced at $80.00 USD each. A special order form for Bulk Orders is included below. Print it out, fill it out, include the appropriate payment, and mail it to us. We will then return the requested number of SKYCOM software packages to the indicated shipping address.

S K Y C O M P R O V e r s i o n 2 . 0 O R D E R F O R M

Solar Terrestrial Dispatch
P.O. Box 357
Stirling, Alberta
T0K 2E0
Canada

I am interested in purchasing the SKYCOM PRO High Frequency Ionospheric Analyst Software. I have remitted a check or money order made payable to the "Solar Terrestrial Dispatch" in United States dollars (personal checks in U.S. currency are accepted) for the amount(s) listed below.

SKYCOM PRO is ONLY shipped on 3.5" high-density (1.44 MB) disks.

Please ship the software via Air-Mail to the following address:

Address: _____

_____

_____

_____

E-Mail: _____

Phone: _____ FAX: _____

Please Check the appropriate box below (prices include S/H):
[__] - SKYCOM only, without a printed manual ($ 110.00 USD).
[__] - SKYCOM with a printed manual ($ 125.00 USD).

If you have previously purchased SKYCOM from us:
[__] - UPGRADING to SKYCOM PRO without a printed manual ($70.00 USD).
[__] - UPGRADING to SKYCOM PRO with a printed manual ($85.00 USD).

Check the following if applicable:

[__] - Please ship ____ Extra Printed MANUALs to me. I have included the required funds ($15.00 each) for printing, shipping, and handling.

I have also enclosed the appropriate funds for the following products:

[__] - BCAST Version 1.03 (Solar & Geophysical Database Management / Analyst Software + Limited Database. $45.00)

[__] - Extended Database for BCAST Version 1.03.
($ 45.00 if registered, otherwise $50.00 if not)

*** CANADIAN RESIDENTS -- NO G.S.T. REQUIRED! ***

I understand that shipment may require between 4 and 6 weeks, depending on the delivery point and the postal service. However, please RUSH my order and ship via AIR MAIL as soon as possible. Thank you.

Date: _____ Signed: _____

Agreed. I'd rather have a newsgroup than a mailing list *any* day.

>I, for one, would read a DX group with some regularity. Anybody else? If
>the response is positive, I *may* even volunteer to post the RFD -- I've
>always been kinda curious about the process anyway.
>KB6JXT, Todd

By all means, Todd, do it! I've wondered why there was no
rec.radio.amateur.dx when there is certainly enough interest and
traffic to support it. I know that there are a number of folks who
have only email capabilities, and for them the mailing lists are fine.
Personally, however, I'd rather be able to get stuff off the news
server as I have time instead of having to deal with all the email
messages daily.

73,
Doug Hall, KF4KL

4257. code - yes

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-06 00:00:00 UTC

Source record: 239183

I have my tech and I am currently working on my general. I simply view code as a method to include those who really desire to be in amateur radio. Look at CB. It's a nightmare to listen to the nonesense and the lack of respect.

I grew up listening to 2 meter.(I have several relatives who are Hams) Now, I can't believe what is being said. I hope it does not go the way of CB.

Code is a right of passage that maintains the "class" of the general ticket. I think we should keep it that way. If you are having trouble with code, perhaps you really do not want to be a Ham.

Posting-Frequency: posted on the 1st and 15th of each month
URL: http://www.gonix.com/pschleck/elmers/admin.html

AMATEUR RADIO: ELMERS LIST INFO AND ADMINISTRIVIA

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via Usenet. Any other uses, please E-mail for permission.

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

Scott Ehrlich has graciously agreed to be a WWW Elmer and provide further information about how to obtain and use WWW client software such as Lynx and Mosaic (see his entry). While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

I expect there to be a bit of controversy regarding my adoption of this somewhat radical new standard, especially to many users who can't or won't use WWW. Those users should be assured that I wouldn't have adopted a standard unless it was easily human-readable by those accessing this document as straight ASCII. The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software (which is why almost all http: URL's in this directory also have corresponding ftp: or gopher: URL's).

For more information about URL formats, see:

ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview:

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of

Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1947-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@gonix.com, the default Reply-To: of this message). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not necessarily get reviewed for some time (although all E-mail sent to me is certainly read with interest *eventually*). Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion postings to this message, "Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource Directory [*-*]," and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

+ news:rec.radio.amateur.misc
+ news.rec.radio.info
+ news:rec.answers
+ news:news.answers

on the 1st of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

+ ftp://ftp.cs.buffalo.edu/pub/ham-radio/
+
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elm
ers/
+ ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2

send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail
within 24 hours (the mail-server uses batch priority to reduce
system demand).

5. Internet Gopher: The latest copy of the list should be available
from the following Gopher sites:

+ gopher://jupiter.sun.csd.unb.ca/
+ gopher://gopher.univ-lyon1.fr/
+ gopher://ftp.win.tue.nl/
+ gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be
available from the following WWW sites:

+ http://www.gonix.com/pschleck/elmers/
+
http://www.smartpages.com/faqs/radio/ham-radio/elmers/top.html
+
http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.mi
sc.html

The advantage of reading the Elmers list at these sites via WWW
client software is that all URL's are converted to hypertext
links.

see also the newsgroups under comp.infosystems.www.* (I haven't
listed URL's for all of the newsgroups under this hierarchy as
there are now about a dozen of them (!!!).)

How may I contribute to the Elmers List?

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users,
for making this service a success.

http://www.synapse.net/~kentrol/
76 McDonald Street S Kentrol FTP Site:
Arnprior ON K7S 2W5 Canada ftp://ftp.synapse.net/private/k/kentrol/

Kentrol is a Windows 3x control program for Kenwood HF transceivers and the R-5000 receiver, which has built-in logging and memory-management capabilities. Since its introduction in 1991, Kentrol has set the standard for Windows-based rig automation, and new features continue to be added regularly. SkedMan is an automated sked manager for Kentrol. Enter schedule data, set alarms, and when an alarm goes off, SkedMan uses - even launches - Kentrol to tune it in.

Kentrol and SkedMan are shareware, so if you haven't tried them, you are most welcome to do so.

I am into public service, and also ARES/RACES. I am the Emergency Coordinator for both organizations in Sonoma Valley, Sonoma county, San Francisco Section of California.

We do ARES and RACES as one program here, and actually lean more towards RACES because the government entities are so supportive.

I like to encourage newer hams to participate in the events for which I coordinate the communications. It's ideal training for emergency services, and it's fun, too. Codeless Technicians who can't participate on most HF NTS traffic nets have a real role to play here, as we generally use VHF and UHF, and these amateurs are instrumental with their enthusiasm in filling the rosters.

It's also sometimes a good initiator for those new hams who are self-conscious talking with other, experienced hams one-on-one, but are OK talking formally to a net control station. Similarly, I try to encourage those new hams who became hams so they could talk to their ham spouses, and all you ever hear them do is talk to their spouses and to no-one else. While that's perfectly OK in and of itself, public service is a good way to break out of that mold and get more fun from radio while really helping out.

ARRL LABORATORY ENGINEER

* Radio Frequency Interference (RFI) matters
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package

on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many amateur radio informational documents (including EMI/RFI files) are also available from the ARRL info server. Send E-mail to info@arrl.org with the word "HELP" in the message body.

See Scott Ehrlich's entry for information about the ARRL Anonymous FTP Archive and World-Wide Web Home Page.

Richard Hieber DL8MFQ, AA8CP

sz0026@daphne.rrze.uni-erlangen.de
AX.25: DL8MFQ@DB0SIF.DEU.EU

Areas of expertise:

* QRP work
* mobile operation
* computers (DOS, OS/2, Linux)
* Packet Radio
* wire antennas

I am an EE student at the University of Erlangen-Nuernberg, Germany. I am active in the university ham radio club (IG-Funk), spending time and thoughts in improving the permanent club display in the lecture hall building. So I have some first hand experience in making printouts and display arrangements visually appealing.

My main interests are shortwave, especially QRP, and computers (Packet Radio, Internet). I have some experience in shortwave mobiling and considerable success with a modified citizens band whip on the bands from 10 to 20 meters. Generally I am fascinated with simple yet effective equipment, hence my obsession with QRP. I like wire antennas. I feel that over the course of time I will more and more learn to appreciate old ham radio equipment (boatanchors) and get more into homebrewing.

I've compiled a list of QRP Clubs worldwide and a FAQ file for the QRP-L mailing list. They are available from the QRP-L WWW Pages at:

* http://ncc1701-d.cc.nd.edu/qrp-l/index.html
* http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

The QRP-L mailing list is intended to be a relatively noise-free
environment for discussion of any subjects relating to low-power
amateur radio operation. Example topics: portable operation, equipment
design and construction, solar and battery power, QRPp, contesting,
kit building.

Jack G.F. Hill W4PPT

MOBILE ANTENNA SYSTEMS AND INSTALLATION (PRIMARILY HF)

* power distribution
* frame grounding
* antenna selection and construction
* mounting the rig
* useful accessories
* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list,
with the blessings of Paul Prescott, N1AAC, who took over from Our
Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over
the rec.radio.amateur.* Working Group mail list, formerly maintained
by Ian Kluft, KO6YQ.

The new mailing list addresses are now

* boatanchors@ThePorch.com
* rra-wg@ThePorch.com

Use these addresses for messages of general interest to the entire
group. Please don't use them to subscribe, change address, etc.

The new automated list manager address is

ListProc@ThePorch.com

Use this for subscribing, unsubscribing, getting archived info,
getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe
boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly,
to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

ListOwn@jackatak.ThePorch.com

Use this address only when there is a problem which really truly can't
be resolved otherwise.

de NA4G, "Boat Anchor Bob", an ol' cw fart .....

If I can be of assistance in older equipment, junk-boxing your way to hamdom, the cheapskate's approach, let me know.

22 yrs a ham, extra class, mostly cw, mostly boat anchors and radio in the traditional sense.

{Telegraphy has been in my family for almost 100 years!}

CWISTS FRIDAY NIGHT FIST FUNCTION

Standard time: Friday Nights at MIDNIGHT LOCAL TIME

Standard freq:
80 meters --- 3702.5 khz for all hands.
40 meters --- 7102.5 khz alternate, for all hands
(between the heterodynes, someone scout out a better QRG)

Standard calling signal:
CWIST IMI DE <yourcall> K (if there are no control stations calling for you to check in), or, CWIST DE <yourcall> K (if there is a control station inviting checkins) (The alternative check in for those OTs with salt behind the ears is a simple DE to get the control station's ears followed by DE <yourcall> K when the control station acknowledges.)

Note:
A simple informal net style protocol will generally be used, unless no control station assumes control for the evening, in which case it is an open roundtable format discussion group.

Note:
The midnight local time gathering is designed to maximize the number of checkins spread out over the world, so less confusion and more checkins are heard. The hope is that someone will be aboard almost anywhere and be heard at least locally, anywhere in the world.

Definition:
A CWIST is a person with an active interest in the PRACTICE and USE of continuous wave radiotelegraphy as directly is applicable to amateur radio. Such PRACTICE and USE may take the form of learning about radiotelegraphy and its history in amateur/commercial areas, its application to radio telecommunication, the practicing of the art and craft of radiotelegraphy, and the refining and developing of the technology of radiotelegraphy.

AUTHOR OF NA4G'S NATIONAL ELECTRICAL CODE FOR HAMS

ABSTRACT

This work was presented as a talk to the Homebrew Special Interest Group (HB-SIG) of the Raleigh Amateur Radio Society (RARS), on 15 January, 1991 and was revised for another presentation on 26 January, 1994.

This document contains excerpts of the National Electrical Code (NFPA 70-1990) that, in the author's opinion, apply to the installation of amateur radio equipment as would commonly be found in most amateur radio stations. Direct excerpts from the Code are contained within inset quotations. Paraphrased excerpts from the Code are itemized. The author's interpretation and discussion of the Code is set full-width. The author's interpretation and discussion of various sections of the Code is not meant to be all-encompassing, nor the official interpretation of the National Fire Protection Association, nor of any official governing body having legal authority of jurisdiction over electrical installations, but is meant to be used as a teaching tool for amateur radio operators.

For ease of access, the group of files have been 'rolled into one' both in tar-compress (862K, for Unix jocks) and PKZIP 2.04g (732K, for MS-DOS users) formats. Both are available from:

ftp://sunsite.unc.edu/pub/academic/agriculture/agronomy/ham/things-to-build/na4g/

HOW TO ACCESS THE WB3FFV AMATEUR RADIO INTERNET BBS !!!

I have placed a BBS system on-line that is mainly oriented towards the
Amateur Community (but there are plenty of other wares on-line).
Through user support I hope to keep the latest and greatest ham
software on-line. The BBS also offers access to nearly all of the
Internet (USENET) NetNews groups, plus access to most Internet
services such as E-mail, FTP, TELNET, Gopher, WWW, Callsign Lookup,
Etc... Below is the information that is needed in order to access the
BBS via Telephone, Telnet, or FTP. Please pass it around to as many
ham's as possible.

System Name: WB3FFV
User Login: bbs

+1 410-361-8170 - 12/24/48/96/14.4/16.8/19.2/21.6/28.8/33.6
(V.32bis,V.32terbo,V.34+,V.FC,HST,V.42bis)

TELNET/FTP - telnet://bbs.abs.net/ (login: bbs)
ftp://ftp.abs.net/

WWW - http://www.abs.net/

Data Settings: 8 Bits, NO Parity, 1 Stop Bit
Times: 24hrs/365days (except for routine maintenance)
Software: UniBoard UNIX BBS Software (Version 2.00b)
Misc. Info: Machine is an Pentium-90/MP running UNIX System V Release 4.2MP
and features more than 9 Gigabytes of on-line file storage.
Most transfer protocols are available!! (multi-line system)

I attempt to keep the latest and greatest HAM software on-line, and
encourage all to upload anything new that they come up with, as it is
of benefit to all. Here is a sample of the software that is available
for downloading:

* KA9Q TCP/IP Software for the PC (Latest OFFICIAL release + TEST
Versions)
* KA9Q TCP/IP for the Atari-ST, MAC, & Amiga
* KA9Q TCP/IP for UNIX based systems
* KA9Q TCP/IP (The NOS release) [UNIX, MS/DOS, Amiga]
* KA9Q TCP/IP (Version by G1EMM, PE1CHL, PA0GRI, Etc.)
* N2GTE Packet Message Switch [GTEPMS]
* WA7MBL BBS for the PC
* W0RLI BBS for the PC
* MSYS BBS for the PC running KISS TNC's
* AA4RE BBS for the PC (plus BETA versions)
* F6FBB BBS for the PC
* G8BPQ PC-Node (Version 4.08)
* Various BBS utilities and enhancements
* Several MORSE CODE Tutors
* TheNet software by NORD><LINK
* Modifications for many HAM Rigs and Scanners
* Digital Signal Processing software (DSP)
* DX and contesting programs

If you are interested in using UUCP to connect to the BBS, this can
also be done as I support Anon-uucp. The login to the system is
'uucpanon', and there is NO password. The listing of available
archives are stored in a file called 'FILES', and it is located in the
/var/spool/uucppublic. To retrieve the files listing just use the
following command:

uucp wb3ffv!~/FILES /usr/spool/uucppublic (ASCII Text)
-or-
uucp wb3ffv!~/FILES.Z /usr/spool/uucppublic (16-Bit Compressed)
-or-
uucp wb3ffv!~/FILES.gz /usr/spool/uucppublic (GNU Gzipped)

This will move a copy of my file listing into your uucppublic
directory.

If you want to access the BBS via Telnet, all you have to do is
access:

telnet://bbs.abs.net/

and login is 'bbs' with no password required.

To use anonymous FTP, just access:

ftp://ftp.abs.net/

and login as 'anonymous' (may not be necessary, depending on your FTP client).

AMPR.ORG IP COORDINATOR FOR MARYLAND SUBNET (44.060.XXX.XXX)

(see James Fay's entry instead for ampr.org IP coordination in Prince George's, St. Mary's, and Calvert Counties)

[Editor's Note: All ampr.org coordinators are listed in the document at:

AUTHOR OF THE QRZ! HAM RADIO CDROM

I am interested in receiving amateur-radio-related public-domain and/or shareware programs, data bfiles, frequency lists, etc., that would make a useful edition to the QRZ! CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ! to qualifying non-profit organizations. Send E-mail or call +1 602 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous ftp server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

The URL is:

http://www.qrz.com/email.html

Register your E-mail address today!

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

Luther M. Lord N4DA

n4da@mindspring.com

If you need a good place to get your amateur radio repaired, I can help. Visit the Radio Doctor's home page at:

http://www.mindspring.com/~n4da/top.html

I will answer all technical questions received via E-Mail at my address above. This service is offered presently at no charge.

AX25: KE0WO @ KE0WO.#NWIA.IA.USA.NA
Secretary for the Tristate Amateur Packet Association
Treasurer for the Cyclone Amateur Radio Club

A few members of our ham radio club were interested in helping out. Since our turnover is usually 4 years or so (graduation is a horrible thing), I thought it may be difficult for us to keep the list up to date. I thought that by creating a local mailing list called "elmers@iastate.edu" we could add or remove people as need be. There would always be at least one person receiving mail on that list, usually more! Even after I graduate, this list will be maintained allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience, much repeater experience, in addition to a considerable background in

theory, as many here are electrical engineering or computer engineering students. If a question can not be answered by the readers of the list, there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local disabled hams (or hams to be) get on the air. But anyone local who needed help would find a group at their door ready to work.

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
Tel. +1 817 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse code training products are also available from every Radio Shack nationwide. Color photograghs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 817 461-4663 anytime, including evenings and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 817 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 800 322-1117.

CIVIL AIR PATROL

CO-HOST - HAM RADIO AND MORE

Ham Radio and More is available for free to any AM station that is willing to run it with national ads intact. If you want there to be a nationwide amateur radio talk show, call your local station and ask them to get the program. They don't have to be part of the Talk America network. They can call KFNN in Phoenix (+1 602 241-1510) or Talk America at +1 508 460-0588.

The Ham Radio & More show, after 4 years on the commercial airwaves, will soon be available via shortwave on WWCR. Beginning June 5, 1995 (Monday early AM), 3:00 AM ET on 12.160 MHz and repeated each Saturday at 5:00 AM ET on 12.160 MHz.

See the entry for Scott Ehrlich for the Ham Radio and More World-Wide Web Page.

WOW!!!! Somebody else who understands!!!

Screw the code. I've tried it, and its nothing but an initiation
rite. Someday, after we have had all our frequencies reallocated to
businesses, we will wish we had done something to open up the higher
level licenses to modern practitioners. As it is, I will stay a
codeless tech, and work on the wireless networking technology in the
Army, where I don't need to know about CW, or Morse code, or spark gap
generators.

>Quartz? no. 1N34? even better ... don't need to muck with the cat whisker.

ok, i'm confused now. ot my understanding, a "crystal" radio is a tank
circuit , run through the "crystal" into an earphone (or amp). A normal
diode can be used instead of the crystal right? is this what you mean
by "1N34" or isn't that just the part number for a diode family?

thanx!

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 07/2330Z SEPTEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 07 SEPTEMBER AND FORECAST FOR 08 SEPTEMBER - 10 SEPTEMBER
Notice: Services will be disrupted 9-10 September due to computer
upgrade. If this presents a problem please contact duty forecaster on
(02) 4148329.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 06 Sep
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: NA
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
08 Sep 09 Sep 10 Sep
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 08 Sep: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 06 Sep
Learmonth 18 3334 4333
Fredericksburg 17 20
Planetary 20 24

Observed Kp for 06 Sep: 6345 3323
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
08 Sep 14 Unsettled
09 Sep 28 Active to minor storm
10 Sep 20 Active
COMMENT: IPS Geomagnetic Warning 21 was issued on 5 September and is
current for interval 6-10 September.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
07 Sep normal normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
08 Sep normal normal fair
09 Sep fair poor poor
10 Sep normal fair poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
07 Sep 22 near predicted monthly values

Predicted Monthly T index for September: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
08 Sep 20 Near predicted monthly values
09 Sep 0 About 10% below predicted monthly values
10 Sep 5 About 5% below predicted monthly values
COMMENT: IPS HF Communications Warning 22 was issued on 7 September
and is current for interval 9-11 September.
Darwin MUFs: near to 10% below predicted monthly values.
Townsville MUFs: near predicted monthly values.
Hobart MUFs: near predicted monthly values with spread F during local
night.

Are you suggesting businesses are only after our HF frequencies? If not, then what does Morse have to do with it? A no-code Tech can do (practically) anything that an Extra can do above 50MHz. How exactly will no-code Extras save our frequencies?

> As it is, I will stay a
>codeless tech, and work on the wireless networking technology in the
>Army, where I don't need to know about CW, or Morse code, or spark gap
>generators.
>
What do CW, Morse code or (yawn) spark gaps have to do with wireless networking technology? To the extent that hams may be experimenting with it, are they primarily using HF? Which amateurs did you have in mind who *do* need to know about spark gap "generators"?

This is yet another post written as though the no-code Tech license didn't exist. It's been four years now, people. Talk about trapped in the past...

>know what that one meant. Are there more of these and where di they come
>from? Thanks

73 came from the railroad (Mid 1800's), 88 came from CB radio. 76 would be
something two people agreed to. You can make up your own numbers, and
after a week you can get other people to use them too :-)

Some other numbers are 15 (that's the difference between a kiss and a regard),
and 161 is a kiss regarded best... :-)

As a minimum they need to include the following (preferably all on the SAME side of the card): your call, his call, date/time(in UTC)/mode/band for the QSO, a signal report, and an indication that it was a 2-way contact. Other information which is nice to include but not essential would be your address, county, grid sqare etc. The minimum information is what most of the 3rd party award programs require in order for a card to be acceptable. Hope this helps. 73 - Alan NS0B

4274. How to get 6 figure grid sqs???

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-07 00:00:00 UTC
From: clinton.peebles@saloon.bcbbs.net
Message-ID: <95090714301011676@saloon.bcbbs.net>
Source record: 239000

P>How the heck do you get your, or anyone's, 6-place grid locator square,
P>such as FM29XX?

I saved this from a message several months ago. I knew someone would
want to see it again, myself included. I did NOT write this..

---------- cut here ----------

How to find you grid locator....

1. The hard part: Find the geographic coordinates of your station. Use USGS
quadrangles, or NOS Sectional Aeronautical Charts, or borrow a GPS
receiver.

2. The easy part: Convert the geographical coordinates into grid locator.
Use a Trimble GPS receiver, which reads in grids, or...There are many
convversion programs free for downloading, but it's really
too simple to bother with a program.
a) The conversion rule is "read right and then up", starting at the south
pole and international date line (180 degree longitude).
b) The locator consists of alternating pairs of letters and numbers, to
the degree of resolution desired, ie FM19JB35RS53TU....
c) The first two letters define the grid field. Each field is 20 degrees
in longitude (EW) by 10 degree in latitude (NE). Thus the field just
east fo the Date line, running north from the south pole is AA. The
field from 80 W to 60 W and 30 N to 40 N is FM. The letters run from
A through R.
d) Each field is divided into"squares",each 2 degrees EW and 1 degree NS,
starting in the "lower left" (SW corner). They are numbered 0 thru 9.
my location is between 78 and 76 W and 39 and 40 N, thus the 4-char
locator is FM19.
e) The next pair of letters resolves each 1x2 degree square into 24x24
subsquares, each 2.5 by 5 minutes, lettered A through X, again
starting in the SW corner of the 4-char grid. My location is about
77 degrees 12.2 minutes W and 39 degrees 3.5 minutes N, or FM19JB .
f) You can continue this forever, with the numbers dividing the previous
quadrangle into 10 parts and the letters dividing it into 24 parts.

I am trying to promote the convention that any portion of the locator which is
SURE, whould be in CAPS, guessed portions in lowercase.

Europeans all seem to know their 6-character locator, while Americans - being
"geographically challenged" - seem to be lucky to get their 4-character
locator correct (just look at the crossed-out locator on my QSL card!!).

Does this help?

He can't prove you wrong. I lived in Germany for 6 years and actually got my first ham license while over there. I knew many Americans who complained all the time about how unfriendly they found it. Of course, they also refused to even attempt to learn to speak German. I (and my family) found the people very friendly and I greatly miss my many friends from there. There is no comparison between our monthly DOK meetings and what passes for a ham club over here. Or in the different concepts of Field Day. My biggest problem over there was getting enough sleep as I used to sit up till way past midnight talking on the radio. since I have come back, I can't usually find a reason to even turn the radio on much less talk on it.

>You are very willing to criticize "all ham radio operators", yet
>we hear nothing from you about the positive things you have done...
>like elmering kids, operating public service events, spreading
>international goodwill, increasing your own technical expertise and
>sharing it with others, etc. Please tell us what sets you apart from
>your incredibly pejoritive definition of "all hams". You can start
>with:

I have "elmered" many people from kids to elders in many different clubs
and privately. I have been President of several clubs. Worked parades,
concerts, police assitance with ham radio etc. In DX contact I have
talked at length with many stations eveb having a Japanese family I
worked in my home overnight. I have educated myself and am current with
technology and pass that on to my students. What sets me apart from most
hams is I get off my butt and I care about the person over the equipment.

>1) If ham radio and ham operators are the dregs of the earth, why did
>you encourage, or even allow, your 14 year old daughter to become a
>ham?

She wanted to become one when she was 7. She thought it was interesting
to talk to people far away and near. She became bored at age 10 when she
discovered how shallow the conversations were (in most cases) no matter
how hard she tried.

>2) When she was 8 years old and "contacted Australia on her own rig",
>was she licensed?

Yes (KA1VBQ), the test was hard for but she was eight years old.

>3) Why didn't you say "she made friends with an Australian" instead?
>Sounds like the fact that she "contacted Australia" was more important
>than meeting the person. I thought you didn't condone this kind of
>operating?

Oh she did try but most DX and domestic hams seemed to be in a hurry.
She would try and convers and occasionally succeeded but all too rare.

>4) If you are so concerned with youth not being interested in ham
>radio, why haven't you been more active elmering them? You're a
>teacher...what better opportunity? Why is it that of the 23 hams in
>your home town, South Dennis, Mass., 19 or them are over age 62,
>and only one, your daughter, is younger than 35?

Oh I have gotten quite a few licensed but after 6 months on the air they
became totally bored. I even gave them substantial grade bonuses if they
got tickets. As you can see Cape Cod is the area of elderly hams.

In Eastham there are many KA1PXX series calls that were all very young
of the hubdreds of young hams licensed NOT ONE is still with it.

>5) And finally:
> Burt Fisher (k1oik@ccsnet.com) wrote:

> : QSL QSL, CQ DX, CQ Contest, QSL via buro, I have traffic,
> : Those topics make my Rohn go erect.

> (among many other distastefull comments)

>Do you talk this way around your daughter, or do you just expose
>other people's children to such talk on Internet?

You think there are children in a ham radio conference?
Give me a break. This is the conference of old white fat men.

>Nobody cares about your Rohn, your opinions about Germans, or your
>fixation with other hams' bedroom activities. Tell us what you have
>done for ham radio lately...your public service, your goodwill
>activities, your technical prowess. So far, you haven't given anyone
>even one good reason to think you might be interesting to know or even
>talk to.

Curious you speak for everyone. Talk to me on the air. It is very common
for hams to say I was their most interesting contact. One ham who talked
to me on ten meters said that after we talked for ten minutes (he also
said I was his longest contact, no one had talk to him longer).

>By the way, happy birthday (28 August). And you said hams don't
>care...

>Greg

That is total B.S. You want to brag you have a CD callbook.
Hams do not care.

Subject: Re: racist german hams

Did you have family killed in the camps ? I did. I went to europe last december with my wife for a vacation. We planned on spending several days in Germany. Our first stop was Munich(and Dachau). The moment the train crossed into germany from Holland I felt VERY uncomfortable. My wife, who is not Jewish,felt it too. We went to Dachau(unbeliveable). After we left Dachau I decided that I wanted to get out of Germany AS FAST AS WE COULD !!! All the people we met while we were there were very nice. Had the best donuts & hot chocolate of my life in the christmas market in Munich. I cannot describe the feelings I had while I was there. The only thing I can say is that I feel that the bomb should have been dropped on Berlin,Not Hiroshima or Nagasaki. I cannot describe it, most of the people are fine, but the COUNTRY ITSELF is EVIL. Well, on second thought maybye Japan too. But If we had dropped it on germany first Japan might have seen what it did and surrendered anyway.

4281. code - yes

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-07 00:00:00 UTC
From: vector@inferno.com
Message-ID: <797554759401@inferno.com>
Source record: 239067

MR>I have my tech and I am currently working on my general. I simply view
MR>code as a method to include those who really desire to be in amateur
MR>radio. Look at CB. It's a nightmare to listen to the nonesense and
MR>the lack of respect.

MR>I grew up listening to 2 meter.(I have several relatives who are Hams)
MR>Now, I can't believe what is being said. I hope it does not go the way
MR>of CB.

MR>Code is a right of passage that maintains the "class" of the general
MR>ticket. I think we should keep it that way. If you are having trouble
MR>with code, perhaps you really do not want to be a Ham.

MR>Ke6plk

just for posterity's sake, keep the code. but, i don't believe we have too much to worry about when it concerns the jammers leaving 2-meters or beginning to migrate down to the HF bands. getting a 2-meter or 440 rig to jam up the airwaves isn't a very costly investment. you can pick up used 2-meter gear at flea markets for around $50, and the jammers take advantage of this.

i don't listen to HF much, mainly since i can't afford a decent rig and i refuse to be stuck with second best. besides, i don't even have my general or tech + yet, so it's not a worthwhile purchase for me. i can say, though, that the majority of people out there that jam on cb and migrate to 2-meters to jam aren't licensed to begin with, and the average cb'er (at least in my area) can barely afford the cb equipment they play with. while i believe the code requirement (with few exceptions such as the time / space relationship problems brought to light by a few hams a few days ago which keep certain people from being able to differentiate between long and short tones) should indeed be maintained, i don't see any reason why abolishing code requirements all together would cause a sudden influx of jammers on the HF bands. how many cb'ers are there that you know of would be able to afford a decent HF rig just so they could go down below 30MHz and have a jam fest? i don't know of anyone willing to drop $1000 or more just to jam.

i just don't see a jamming epidemic on HF rising up due to the dropping of the code requirement. it just doesn't sound plausable to me.

4282. My response to a ham Jew hater.

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-07 00:00:00 UTC
From: k1oik@ccsnet.com
Message-ID: <7975112593301@ccsnet.com>
Source record: 239068

Here is my response to Ruthie (AA2IO)with some of her comments included:

Ruthie said:

RU>I'm also wondering if you are the least bit aware that if it hadn't been for

RU>Jews in the first place, Hitler wouldn't have had any reason to go on a
RU>rampage and possibly that would have spared the lives of many Germans,
RU>Italians, Poles, Russians and many other ethnic groups? Should we hate ALL
RU>JEWS for even exsisting because if they hadn't possibly my relative would
RU>have been spared rather than put to death (not a Jew, a German who was ill
RU>and was encarcerated and put to death during WWII)?? Thankfully I do not
RU>live in the past nor do I carry hate and unforgiveness in my heart and soul.

RU>My life is much better because I don't. Try it, you might like it.

I replied:
Ruthie your message is going public. People need to see what you are
made of. You are a total pig. You are blaming the victims for the deaths
of others. So if you were raped the attacker ought to get off because if
you were not there he would not have raped you. And thus the rapists
family ought to hate you if he winds up in jail because of what YOU did
by being there. I do not hate today's Germans but I hate that in them
that caused them to sell to Iraq germ warfare. But it is clear you
despise Jews for in your words they existed and therefore caused the
Nazi actions.

Ruthie said:
RU>How many Native Americans were slaughtered by Americans? How many Africans
RU>and other ethnic peoples were tortured and died due to being enslaved by
RU>AMERICANS??? How many people died due to the AMERICANS using nuclear
RU>warfare?? How many Jews, Germans and others died during WWII during the
RU>intentional fire bombing of cities such as Dresden???

I replied:
The American actions against Indians pales against the Nazi acts. There
is NO comparision. Slavery has some comparison but still pale against
the Nazis and white America paid for those mistakes and are still paying
dearly. As far as nuclear warfare it SAVED lives. Fire bombing was
necessary. If you start afight you ought not be surprised if the victim
fights back.

RU>My sympathies, Burt, if you're doing this for more than
RU>entertainment....your life must be really empty and full of hate.

Please do not judge me based on your character (of course if I even
ascribe to you the fact that you have ANY character, that is a stretch).

4285. GB2RS News 10th September 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-07 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <810525669snx@llondel.demon.co.uk>
Source record: 239071
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 10th of September and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

The RSGB International HF Convention is taking place this weekend at the Beaumont Conference Centre at Old Windsor in Berkshire. Doors open at 9.00 am today, Sunday the 10th, and day visitors are very welcome. Scheduled for today are presentations on RSGB HF Contests, the RSGB Islands on the Air awards, equipment reviews, amateur radio in Bhutan, topband antennas, the Kermadec Islands DXpedition, the DXCC program and CW techniques. There will also be a Novice Forum, a Packet Cluster Forum and the Young Amateur of the Year presentation will take place. The HF Awards and Trophies will also be presented at the Convention. Further details can be found on pages 21 and 40 of the September RadCom.

Next Saturday, the 16th of September, has been designated "World Amateur Radio Day" by the International Amateur Radio Union. To celebrate the occasion, special event station ZS100IARU, will be operating during an event called "YARIA" - 'Youth for Amateur Radio in Africa'. "YARIA" is a quarterly event in which amateur radio stations are set up in schools, colleges and youth clubs in an effort to introduce amateur radio to young people throughout Africa.

RSGB Headquarters in Potters Bar will be open next Saturday, the 16th of September, from 10.00 am to 4.00 pm. The bookshop, museum and library will be available to visitors and GB3RS will be on the air to celebrate World Amateur Radio Day. Morse tests are also available on demand between 11.00 am and 12.30 pm. Don't forget to bring two passport-size photographs and the appropriate fee with you if you wish to take your Morse test at RSGB Headquarters.

There are a number of changes of QSL Bureau Sub-Managers to report. The new sub-manager for the G0U series of callsigns is David Hughes, G0RVW, whose address is 3 Willow Crescent, Moss Lane, Moore, spelt M-O-O-R-E, Cheshire. The postcode is WA4 6UX.

For G3RAA to G3TZZ, that is the G3R, G3S and G3T series, the new QSL Bureau sub-manager is Mrs P McVey, G0PXJ, whose address is correct in the current RSGB Call Book. Derryck Buckley, G3VLX, who used to be the sub-manager for these series, continues to handle cards for the G4D and G4R series of calls.

And the Sub-Manager for the G8 Three-letter calls and G0D series of callsigns - John Purvess, G0FWP - has changed his address. The new address is 389 Otley Old Road, Cookridge, Leeds, LS16 6BX.

A meeting of QRP enthusiasts, Novices and Novice Instructors has been arranged for Saturday the 16th of September at the United Reformed Church, Back Chapel Lane, Gorleston, near Great Yarmouth, starting at 2.15 pm. Further details from David Buddery, G3OEP, on 01493 662323.

The Mid-Warwickshire Amateur Radio Society will be holding an Open Evening between 6.00 and 9.00 pm on Tuesday the 12th of September. It is intended primarily for the general public and there will be displays on packet radio, computer programs, satellites, shortwave listening, radio construction and Raynet, as well as demonstration stations on HF and VHF. The venue is the St John Ambulance Headquarters in Emscote Road, Warwick, and all are welcome.

The 70 centimetre voice repeater GB3DD in Dundee returned to the air on channel RB10 from its new site on the 12th of August.

Ken Rosier, G3DJK, is celebrating the 50th anniversary of his activity as XZ2AF from Burma. He sends Best Regards to his old colleagues and says "QSL to G3DJK or write to him QTHR".

Roger Western, G3SXW, expects to be active from Nepal as 9N1SXW or 9N1/G3SXW from Tuesday the 12th until the 21st of September. All nine HF bands will be used, CW only, and Roger will always be listening 2 to 5 kHz up from his transmit frequency.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From Juan Fernandez Island, a major expedition will be signing CE0Z from the 13th until the 21st of September on all bands SSB, CW and RTTY.

From Corsica, F5XL is active from now until the 19th of September. He also hopes to be active from a number of the Corsican offshore islands.

And from the South Cook Islands, ZK1PNX will be active from Thursday the 14th until the 30th of September, on 80, 40, 20 and 17 metres, SSB and CW, as well as RS-12 Mode K.

Now news of some special event stations:

M1OOG, that is "Mike One Oscar Oscar Golf", is on the air now until the 21st of September. The callsign symbolises the 100th anniversary of Guglielmo Marconi's invention of radio, and is only the second time that the Radiocommunications Agency has authorised the use of an "M" callsign for amateur stations.

GB4NAS is on the air all week, culminating in operation next weekend, the 16th and 17th, from the Newbury Agricultural Show at Chieveley in Berkshire. The station hopes to be using CW, SSB, FM and RTTY and an award will be offered to anyone contacting the station on three different modes, at least one of which must be during the Show next weekend.

The Poldhu Amateur Radio Club is operating GB100NT from Mullion Cove in Cornwall this weekend, the 9th and 10th of September, in order to

celebrate the 100th anniversary of the National Trust.

And also celebrating the National Trust centenary, the Yeovil Amateur Radio Club is operating GB0NTM from Montacute House in Somerset this weekend, the 9th and 10th.

The Medway Amateur Receiving and Transmitting Society is operating GX5MW on HF, and G8MWA on VHF, from the Strood Steam Rally this weekend, the 9th and 10th. All visitors are welcome.

GB2OWM is on the air on the HF bands from the Orkney Wireless Museum this weekend, the 9th and 10th, during the fifth Orkney Science Festival. The museum is located on the island of South Ronaldsay.

Also on the 9th and 10th, the Scarborough Special Events Group, in association with English Heritage, is operating GB0EHS from Scarborough Castle. Look around 3568 kHz on CW or 3725 kHz on SSB, and on 2 metres and 70 centimetres.

Members of the Royal Air Force Amateur Radio Society are operating GB0RAF on 40 and 80 metres from the Lincoln Hamfest, today, Sunday the 10th of September.

Callsigns GX2AA, GX3LRS and GX6XRS are on the air from the Leicester Radio Society's Open Day at their club house today, Sunday the 10th. All visitors are welcome.

And GB0SRA is also active today from the Southend and District Radio Society's rally at Westcliff-on-Sea in Essex.

Next the Rally News:

The Lincoln Hamfest is taking place today, the 10th of September, at the Exhibition Centre, Lincolnshire Showground. In addition to the usual attractions, which include Morse tests on demand, G4NVD is offering a free independent "Functional Confidence Check" on any amateur radio equipment bought at the rally. The doors open at 10.30 am.

It's the 75th anniversary year for the Southend and District Radio Society, and the society is holding its radio and computer rally at the Cliffs Pavilion, Westcliff-on-Sea, in Essex, today, Sunday the 10th of September. The event features traders and an RSGB membership information stand and book stall. The doors open at 10.00 am.

The British Amateur Radio Teledata Group - BARTG - are holding a rally at the Sandown Exhibition Centre, Sandown Park Racecourse, at Esher in Surrey today. The doors open at 10.30 am.

Next Sunday, the 17th, the Central Lancaster Radio Rally takes place at the Central Lancaster High School, Crag Road in Lancaster. Doors open at 10.30 am and further details may be obtained from Susan on 01524 64239.

The Carnfield Car Boot Sale takes place at Bletchley Park on Sunday the 17th. Details from G3ZPA on 01908 501310.

And the East of England Rally takes place at Peterborough Showground on Sunday the 17th of September. Talk-in is on 2 metres channel S22. Details may be obtained from Vince, G8NGZ, on 01733 331211.

The Three Counties Radio Rally will take place at Malvern in Worcestershire on the 24th of September. Please note that the correct phone number to call for further information is 01905 773181, and not as published in their advertisement in the September RadCom.

Now for the HF contest news:

The Worked All Europe SSB Contest is taking place this weekend, the 9th and 10th, with European stations working non-Europeans. A station signing GB5HQ is competing in this contest from the RSGB HF Convention.

On Tuesday the 12th of September, the second session of a Slow Speed CW Cumulative Contest takes place from 1900 to 2030 UTC. The rules are in the August RadCom.

And next weekend, the 16th and 17th, the Scandinavian Activity CW Contest takes place. Brief rules are on page 24 of the September RadCom.

Next some VHF contest news:

Entrants to the RSGB 144 MHz Trophy, the IARU 144 MHz contest, and the RSGB 144 MHz Listener's contest which took place last weekend should note that there is a change of address for entries. They should be sent to Steve Thompson, GW8GSQ, at P O Box 29, Bridgend, CF35 5YA.

The WAB 144MHz QRO Phone contest takes place today, Sunday the 10th of September, between 0900 and 1700 UTC.

On Wednesday the 13th of September, the second session of the 144 MHz CW Cumulative contest will take place between 2030 and 2300 local time. The rules are in the May RadCom.

And now the solar factual data:

The period from the 28th of August to the 3rd of September saw the solar flux and sunspots decline. Geomagnetic activity was mostly quiet. Sunspot numbers declined from 33 on the 28th, and the mean for the period was 23. Solar flux levels declined also from 82 units on the 28th, to 74 units by the 3rd, with an average of 76 units. A couple of small and insignificant solar flares took place, the largest being a B6/SF, which occurred on the 30th. The electron fluence remained at moderate levels, while X-Ray flux declined from a high of A6.2 on the 29th. The 90-day solar flux average on the 3rd was 74 units, the same as last week.

Geomagnetic activity remained at quiet levels, except for the 29th, when levels increased to unsettled, with an Ap index of 14 units. The average for the period was Ap 7 units. The aa indices, as supplied by the British Geological Survey for the period from the 22nd to the 28th of August, increased to active levels by the 23rd,and lasted till the 26th when levels returned to quiet conditions. The most disturbed day was the

23rd with 29.3 nanoTeslas recorded. The average was 18.5 nanoTeslas, about K2. Bartel's rotation number 2214 will start on the 12th of September. The mean sunspot number for August 1995 was 15.1. A maximum of 41 occurred on the 26th, with a minimum of zero on the 14th, 19th and the 21st. The smoothed sunspot number for February 1995 was 23.1.

I'll repeat the figures: spots - 23, flux - 76, Ap index - 6, X-Ray flux - A2.8. August mean RI - 15.1, February 1995 smoothed - 23.1.

Now the ionospheric data for Central France:

The F2 daytime critical frequenices at Poitiers, as reported by Meudon for the period from the 25th to the 31st of August, saw levels decline from 6.5MHz on the 26th, to 5.9 MHz the following day. Levels then increased again and averaged 6.4MHz. The darkness hour lows averaged 3MHz and varied little day to day. The daylight highs took place between 0900 and 1200 hours from the 25th to the 27th, and then at 1900 hours for the rest of the period. The darkness hour lows took place between 0300 and 0500 hours. Spread F was reported for short periods during the early mornings of the 26th and the 27th.

I'll repeat the figures: highs - 6.4MHz, lows - 3MHz.

And lastly the solar forecast.

This week, with the quieter side of the sun looking our way, solar activity is expected to be very low. Solar flux levels are expected to be in to the low 70s but may show a slight increase towards next weekend. Geomagnetic activity could well be at unsettled to active levels for the next few days but is then expected to decline to quiet levels for the rest of the week. Ionospheric MUFs during daylight hours are expected to be about 20MHz for the south and 17MHz for the north.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Quebec and G7 Victor Tango series, and Novice calls in the 2 0 Alfa Mike and 2 1 Echo Quebec series.

These are the standard distress fequencies for aircraft; monitored by air traffic control, various military and other government organizations, and a lot of airliners (emergency radio beacons set off automatically by g forces in crashed aircraft broadcast on one of these).

I used to own one, and bequeathed it to my brother, KM8Z. We were
going to resurrect it for packet, at which it would excell, except
for the fact that it was designed for operation 146 - 148 MHz, which
is out of the usual packet region. There are a number of mods to
extend/change its region of operation, but I deemed them too dificult
for me to implement. They involve changing the one of the internal
crystals (used in the synthesizer) and re-adjusting the PLL. The
other problem is that it was set for 15 kHz steps in lieu of the more
common 20 kHz steps for packet. It's definately a great radio, but
just a little off the mark for packet.

CQ CQ , calling hams in or nearby Philadelphia, PA.

My name is Terje, Call-sign LA8RIA.
I am going to visit Philadelphia between Fri 15. sep. 95
and Sat. 23. sep. 95.
During this week I am interested in visiting one or more
ham-stores to pick up an all mode 2m or 2m/70cm transceiver.

Are there anyone out there who can help me out locating ham-stores
in or nearby the City.

I will attend the International Oracle User Week at the
Pennsylvania Convention Center.

Answers are preferrably recieved by mail to :
terjeu@fo.mil.no

Many thanks in advance !!

Message-ID: <42m3e1$h3o@news.telebyte.com>
Source record: 239079

Burt,
I am a "minority" person. Shortly after I got my ticket, I heard one ham refer to minorities in a rather bigoted
way on a local repeater. On 10m, (28.325 USB) there was a net of obscene bigots. Fortunatly, these
people are the exception, not the rule. Up here (Pacific Northwest), many hams are very active in the local
community (ARES, special events, comms for parades, etc.). I spent several days at the fires in central WA
last year, at CENCOM (the 911 people) during a serious ice storm, on search and rescues just to name a
few. You're right there are some people that are jerks on the air. The people I regularly chat with are good
people and are good examples of what a ham should be. We also have a number of younger hams. We
have special event stations at local schools. The kids love it and the principles have come to views us as
resources. (My principle told me that in event of an emergency, I or my handheld were not to leave her
side.)

Are there any files or programs for the Macintosh, ie. is this a PC/Mac compatible cd-rom?

I use a Power-Mac and have Softwindows to run Dos and windows software, but I prefer native software for the speed and ease of use. Can I use your product with my system?

Hi all...

I am looking for hamfests in the next few weeks near Penn State.
The town/region is State College, PA (actually dead center of PA).
Pittsburgh shows will be fine too.

Specifically, I am looking to pick up a basic Oscope and function
generator for use with my CmpEng classes. If anyone can point me in the
direction of a fest or a listing of them, I would appreciate it.

Thanks, Jason Soloff

++++++++++++++++++++++++++++++++++++++++
```

From: Ruthie Cunliffe <ruthie@eznet.net>
Subject: Re: fool

As for your pal from Israel, well of COURSE he wouldn't have liked what I said!! Too many Jewish people live exclusively in the past and will NEVER let go of it, continue to beat to death what happened during WWII, and are so blind they can't see how THEY behave now. The behavior in Isreal is disgusting in its own right.

And now my comment (Burt-K1OIK):

Most readers will not "get it", but evil triumphs when good people look the other way. Are hams like Mark Fuhrman? No but they will look the other way.

I saw a brief mention of a hamfest being held in the Gaithersburg, Maryland area the weekend of Sept 9-10, but didn't get any of the details. Does anyone know when and where exactly this is being held?

(Apologies for the bandwidth waste to those on other continents.)

-- John Kodis.

No ham defends anything especially minorities buty I try.
I wonder what black hams would say how they are treated?

Hams do not hate, the just let the shit happen.

##########
Ham Radio & More is on the Talk America Network. It is aired LIVE
every Sunday at 6:00pm Eastern Time, originating from Phoenix, Arizona.

Our toll free listener call-in line is 1-800-298-TALK. The
originating station number is 1-602-241-1510 for more
information.

Any radio station can air the show FREE OF CHARGE. Get your local
station to air the show by calling the program director asking them
to air the show. Faxes help, too. Again,there is NO CHARGE for the
station to air the show, so a lot of calls asking for the show
can really work.

Also, be sure to check out our WWW Home Page. It has information on
upcoming shows,reviews of past shows, and even theme music. It is
updated courtesy of the Boston Amateur Radio Club. Access it at:
http://www.oakland.edu/barc/ham-more.html

Surprisingly when I went looking for part 97, I started with the FCC.
They "don't keep it online". I sent mail to the fcc and asked where to
find it. They suggested the house web page. Ahyuup. That's the OLD version.
The best way to find out if it is indeed the new one is if it contains
the modifications to 97.203(g) (I think) concerning operation on the 219-
220 MHz band. If it isn't in the copy you have, it isn't the current one.

We already have jamming and turf battles, with coded licensees.
In fairness to pro-coders, I think they're mostly concerned about
crowding and inadvertent jamming rather than deliberate acts
of vandalism on the bands, however. I think 2 meters can be
instructive here. As crowding has increased, licensees have moved
to other bands, relieving the pressure. This tendency to move
away from crowds is somewhat universal, and would apply at HF
as well. CBer's, alas, don't have the option of moving away,
at least not legally, so the turf battles become intense in
a way that simply doesn't appear likely for amateurs with their
much larger spectral span.

ZCZC AE23
QST de W1AW
DX Bulletin 47 ARLD047
From ARRL Headquarters
Newington CT September 8, 1995
To all radio amateurs

SB DX ARL ARLD047
ARLD047 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, The OPDX Bulletin, Randy, K0EU, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral column from the pages of QST magazine. Thanks to all.

MONACO, 3A. Luciano, I1YRL, will be back in 3A land sometime in September. There were no specific dates mentioned. He is usually active as 3A/I1YRL and can be found on all bands and modes.

REUNION ISLAND, FR. Didier, F5PXQ, will be active as FR/F5PXQ from October 18 to 25 and November 15 to 31. His operations will be on 20 through 10 meters including the WARC bands. In between these operations, he will be active from Mauritius, signing 3B8/F5PXQ, from October 26 to 30.

RODRIGUES ISLANDS, 3B9. 3B9FR has been showing up quite regularly on 30 meters. Look for him around 10103 kHz at 0301z or between 1130 and 1230z.

JUAN FERNANDEZ, CE0 Update. Randy, K0EU, reports that equipment plans, frequencies, and QSL route have been finalized for the September 1995 Juan Fernandez DXpedition. K0EU, K4UEE, and K0IYF will operate using the call sign CE0Z for one week of operation starting September 13 and ending September 20. Emphasis will be placed on low bands, WARC bands, RTTY and satellite.

CROZET, FT5. From December of this year until February 1997, Jean Jacques, F5SZK, and Samuel, F5IJT, will be active as FT5WF and FT5WG from Crozet.

DJIBOUTI, J2. Patrick, F5SFD, will start his activity in September as J28PP for the next two years. He will be active on SSB and CW. QSL via F5PWH.

BENIN, TY. A group of three Norwegian hams will go on a DXpedition to Benin from September 16 to 26. The operators, who are members of LA DX Group, are Bjorn, LA9IY, Roger, LA4GHA and Johnny, LA5IIA. They expect to use the call sign TY8G. Operations will be on all bands and modes, but with concentration on CW, low bands and the WARC bands.

ST. KITTS, V4. Joe, VE3BW, states he will be active in the CQWW SSB Contest. Listen for V47BW.

Propagation Forecast Bulletin 38 ARLP038
From Tad Cook, KT7H
Seattle, WA September 8, 1995
To all radio amateurs

SB PROP ARL ARLP038
ARLP038 Propagation de KT7H

Solar activity was off a bit over the past week, with the average solar flux down about five points from the week before, and average sunspot numbers down by over 26. Geomagnetic activity was mostly low, but there was a big increase in activity over the past few days caused by a recurring coronal hole. The K index rose as high as six, which indicates very disturbed conditions with dramatic absorption of HF radio signals.

Look for another peak in disturbed conditions around September 10, and continued low solar flux. Flux values should rise slightly and peak in the mid to high seventies around September 22.

Coronal holes, which are mentioned frequently in this bulletin are areas in the coronal layer of the Sun through which an unrestricted flow of high energy particles passes into space. When the earth moves through one of these streams, the geomagnetic field is disturbed and the ionosphere is neutralized by protons. Coronal hole activity tends to occur more during the downward trend and at the bottom of a solar cycle, which is where we are right now.

Sunspot Numbers for August 31 through September 6 were 18, 13, 11, 11, 23, 11 and 11, with a mean of 14. 10.7 cm flux was 75.6, 73.7, 73.3, 73.6, 74.4, 74.6 and 71.8, with a mean of 73.9.

Gary, I don't buy into that particular argument for keeping code (to keep down the crowding on HF) so I won't get into it. There are far better reasons. However...propagation varies significantly from one HF band to another. If 20 Meters is the optimum band for your communications needs, and it is wall-to-wall with stations (as it often is), pray tell where do you propose one move to?

You also decry the methods and attitudes of American DX'ers and contesters for having what you perceive as a terrible negative effect on international goodwill. It seems that increasing the US HF ham population a factor of 3 or 4 would make that condition many times worse. But then I suppose the foreign hams could just move down to the Morse sub-bands to escape the din...since at least THEY would still have the technical ability and operator skill to do so.

Jeff said:

Hi Alan. I beleive I can. Here is 97.113(a). The date on this is
December 20, 1994. You may have an older one.

Mike Said:

Hi, Alan -

I think Jeff captured it, and it's the same as the version I have
which is
dated 7/1/95.

Quite a bit of the wording in the 97.113 you quoted is foreign to me.
Out
of curiosity, where did the version you have come from? It's bad
enough
that we tend to play amateur lawyers interpreting the gray areas, but
I'd
be more than a little alarmed if there were two current but
conflicting
authorities on the statute! Wowee!

I say:

I copied the text via cut and paste from the U.S. House of
Representatives Internet Law Library Code of Federal Regulations at
http://www.pls.com:8001/his/cfr.html. Since it is maintained by House
Infromation Systems, I have to assume that it is the current language.
If it isn't, I'll have to send a complaint to Comments@hr.house.gov.

Silly you, indeed. I don't really care what the content of
any message is; the bottom line is that posting private e-mail,
something you seem to have taken to lately, is extremely poor
Usenet behavior. Your goal is to inflame, stir up trouble,
not to defend minorities.

send mail to info@arrl.org and in the body of the message include
send part97.txt

You will receive about 5 bits of mail that are the entire part 97.
And it's the newest latest greatest one. Including the 219 stuff.

It's better than that. The new(er) Genie openers have a (at least) 12 bit
system. Thats 4096 combinations on the frequency they operate on. So I
'spose if you didn't mind attracting too much attention to yourself by
sitting across the street for a few hours (days) and wanted to reprogram
a door opener, you'd finally get it right.

I don't think it was a settlement, more like World War III, but it was in
Virginia's name when they fell out. He fought for it, and then after
McGraw-Hill bought bought Byte he fought against it with Kilobyte, later
Kilobaud.

JH>73

JH>John AB6KH :-)

the emergency aspect of amateur radio is the main reason i use when
explaining why i like the hobby. i tell people that i don't like
sitting around feeling helpless and useless when a major disaster
strikes. i tell them that it's the most useful method i can think of
that helps all the local organizations on a whole keep their act
together and keep moving during an emergency. that usually satisifies
them.

communications reserve of the State of California
Governor's Office of Emergency Services

Bulletin 395 - for Release 9/11/95
OPS - Ways to be involved. Part 1/2

Recent bulletins (377 and 379) featured aspects of Community Emergency Response Teams in Huntington Beach, CA. Amateurs should be interested to know that a RACES radio operator is a part of each CERT response group. Their May '95 Newsletter describes it this way: "A Certified Disaster Worker will lead the group. A RACES member (an amateur radio operator) will be assigned to each group to maintain communications to the City's EOC. CERT response groups are an important addition to our emergency response organization. From now on when elderly or handicapped person calls during a flood and requests help, we don't have to tell them: 'there is no one available because all city workers have been assigned". We can say, "CERT will be glad to assist you!"

Several RACES units report exercises and drills with the Red Cross; some of which were limited to RACES-only radios; i.e., Red Cross personnel did NOT use their radios.

While some jurisdictions have a specific Search and Rescue unit with its own communications, others augment their search efforts with the RACES, especially where the unit has a mobile command post with the ability to operate on BOTH amateur and "official" frequencies. (i.e., using type-accepted radios for government frequencies.)

From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <R1BhVMJ.sanderman@delphi.com>
Source record: 238966

Here is a summary of news items covered on edition #128 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 16-Sep:
-
1. Amateurs in the Carribean Active in the Wake of Hurricane Luis
2. FCC Rethinking Recently Announced Office Closings
3. Australian Official Visits FCC's LA Office
4. Three New Cosmonauts Aboard the MIR Space Station, One a Ham
5. Scatter Chasers Celebrate the Founding of New Comet
6. Launch of Shuttle Endeavor Re-starts US Space Program
7. Sales of "Windows95" Top $1 Million Mark in Record Time
8. Weekly Propagation Forecast with George Bowen, N2LQS
9. Clever New Virus Found in Microsoft Word Document Files
10. "Amateur Radio Newsline" - Edition #943 from Los Angeles
11. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
12. "The RAIN Dial-up" from Chicago
13. Upcoming Special Event Stations
-
Satellite time and uplink equipment have been provided by SKYVISION
as a service to the amateur radio community.
-
"This Week in Amateur Radio" is a weekly amateur radio news and
information service, in audio newsmagazine format, which is produced
by Community Video Associates, Inc., a New York State not-for-profit
corporation based in Albany, New York. The program is carried on
the "Tech Talk Network" each Saturday at 8:00 PM (EDT) on the
Telstar 302 commercial communications satellite, transponder 21
(11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees
west longitude in geosynchronous orbit, and can be heard on various
VHF/UHF repeaters throughout the United States and Canada, as well
as on 160 meters at 1860 kHz. Contact your local amateur radio club
or repeater operator if "This Week in Amateur Radio" is not being
heard in your area.
-
Production and transmission expenses are underwritten by
contributions from repeater system operators, amateur radio clubs,
and individuals. For further information, contact George Bowen,
N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at
518/664-6809. You may also reach them via amateur packet @
WA2UMX.FN32AW.ENY.NY.USA.NA or on the Internet to KXKVI@DELPHI.COM
or SANDERMAN@DELPHI.COM.

See QST, February 1994, p.99: A Wilderness VHF Protocol.

This protocol suggests monitoring 146.52 simplex for five minutes at the top of the hour at 0700 LT, 1000, 1300, 1600, and 1900. (7 a.m. through 7 p.m. every third hour). Everybody liked the idea. If I lived in a repeater-sparse area (I don't) I would monitor too!

==========clip==========

Hi Alan. I beleive I can. Here is 97.113(a). The date on this is
December 20, 1994. You may have an older one.

S 97.113 Prohibited transmissions.
(a) No amateur station shall transmit:
(1) Communications specifically prohibited elsewhere in this Part;
(2) Communications for hire or for material compensation, direct or
indirect, paid or promised, except as otherwise provided in these rules;
(3) Communications in which the station licensee or control operator
has a pecuniary interest, including communications on behalf of an
employer. Amateur operators may, however, notify other amateur operators of
the availability for sale or trade of apparatus normally used in an amateur
station, provided that such activity is not conducted on a regular basis;
(4) Music using a phone emission except as specifically provided
elsewhere in this Section; communications intended to facilitate a criminal
act; messages in codes or ciphers intended to obscure the meaning thereof,
except as otherwise provided herein; obscene or indecent words or language;
or false or deceptive messages, signals or identification;
(5) Communications, on a regular basis, which could reasonably be
furnished alternatively through other radio services.

Like you, I have an interest in electronics (my mother will attest to that, she thought I was building a bomb a few times - and one time I found myself on the wrong end of a goose-neck lamp with frayed wires in the neck - Thats another thread)_

How do I answer....Its a hobby (I tell that to the OT's that get thier shorts in a twist about something or someone...ITS ONY A HOBBY!). Some people are into photograhy, some into old cars, some into collecting (most hams are - Junk), some into running, jogging, bowling, softball....I think you get the idea.

But you hit it on the head, when there is a 'need', its more than a hobby, its a service. BTW, the local AEC is trying to think of new ways to make the gummit know of our services, but in this day of cell phones, and multiple frequencies in use for any given town, they don't think of it much. Not to change the subject, but last year, a critter stepped off a 115 KV line near the PD, and they went down. The PD dispatcher was talking to the FD dispatcher via simplex and she was relaying the info to the cruisers...The PD even lost the PBX at the PD. Where was the generator? I know several hams around here with 'formidable' generators and switching networks. What would have happened if that were a hurricane or a huge nor-easter and they 'couldn't' get power for a few days?

73/Steve - N1TEC (arrl/ares)

Its a hobby!

Well, I can tell you that a Kenwood TH-77 or TH-27 will work with a
Flight-Com F-20 headset. The impedances are ok and the mic will work on
the voltage present. I didn't get around to making a remote push to talk
but that would be fairly easy. The mike is a little hot but you can take
care of that by moving it a little further away from your mouth than you
would position it for normal aircraft use.

From ARRL Headquarters
Newington CT September 8, 1995
To all radio amateurs

SB QST ARL ARLB085
ARLB085 3rd-party, reciprocal news

The Federal Communications Commission has added three countries to the list of those with which the United States has an Amateur Radio reciprocal operating arrangement. They are Bosnia-Herzegovina, Croatia, and the Former Yugoslav Republic of Macedonia.

The FCC also has added the Republic of the Marshall Islands to the list of countries with which the US has a third-party traffic agreement.

A visitor to the US from a ''reciprocal country'' may obtain a permit valid for one year by sending a completed FCC Form 610-A application and a copy of his license to the FCC's Gettysburg, Pennsylvania office.

Complete lists of US third-party traffic countries and reciprocal operating arrangement countries are available by sending an SASE to ARRL Headquarters, or electronically through the sources listed in ''How to Contact the ARRL'' in each QST.

Hi, Alan -

I think Jeff captured it, and it's the same as the version I have which is dated 7/1/95.

Quite a bit of the wording in the 97.113 you quoted is foreign to me. Out of curiosity, where did the version you have come from? It's bad enough that we tend to play amateur lawyers interpreting the gray areas, but I'd be more than a little alarmed if there were two current but conflicting authorities on the statute! Wowee!

> As for your other points, there _is_ the difference in population. :)

Fer sure! ;-)

> How do your members use DTMF paging through the repeater if you do not
> let them throw tones?

Truthfully? This hasn't been an issue! I can probably count on one hand the number of hams I know in the area who have even read the pages in their manuals about using the paging features.

That really emphasizes the difference in the user density each of us has to deal with. Nobody around here seems to have the need to use the paging features because there are plenty of repeaters within "earshot" that have so little traffic on them that they can be openly monitored without disrupting (...or ruining <g!>) your day.

Heck - of about 100 area repeaters, there are only 8 you'll need PL for! As a SoCal native, I'm not too fond of St. Louis as a place to live, but when put into perspective it sure is a peaceful place to enjoy ham radio!

>ok, i'm confused now. ot my understanding, a "crystal" radio is a tank
>circuit , run through the "crystal" into an earphone (or amp). A normal
>diode can be used instead of the crystal right? is this what you mean
>by "1N34" or isn't that just the part number for a diode family?

The "crystal" normally used in crystal radios is galena, IE lead sulphide.
It's a major lead ore that often has silver sulphide, or zinc, cadmium,
antimony, or copper sulphides as impurity inclusions. In the semiconductor
realm, these would be called dopants. Lead sulphide itself is a semiconductor,
and with the addition of the dopants, it forms a rectifier diode. The 1N34
is also a rectifier diode, but made from carefully doped germanium rather
than lead sulphide.

Quartz crystals, on the other hand, are generally high purity silicon
dioxide, and are good insulators, so they won't do as the "crystal" in
a crystal radio. (The silicon in silicon semiconductors is the high
purity metallic form, and not the insulating dioxide.) The use of the
term "crystal" in conjunction with galena has its historical roots in its
association with leaded "crystal" glass, such as that used in chandeliers,
or in the days before concerns about lead poisoning, in stemware. Galena
is a cubic crystal (in the physical chemistry sense) in the same fashion
as table salt, but like table salt it is not crystal clear. It also occurs
in grannular, fibrous, and octahedral forms, and in a variety of colors,
depending on the dopants present. It's rarely found as a pure crystal.

The dopants in galena naturally form N and P regions. You use a cat's
whisker, a fine copper wire, to probe the crystal for one of these
regions, and viola, you have a diode against the bulk material clamped
in a holder. It's not a very good diode, but it's sufficient to serve
for strong signals. Another material that can serve as the "crystal"
in a crystal radio is a Gillette Blue Blade. These old razor blades
aren't crystals in the sense we're using here, but have impurities in
the bluing that can serve as PN junctions in much the same way as the
dopants in galena.

>
>Gary, it is just like business, the better you are or the more
>proficient, the higher you advance in the organization. In the case of
>Amateur Radio, the more privaleges that you receive.

That's funny. It's been my observation that you rise in a corporation by politics, at least until you reach a level where your incompetence could be a real hinderance to the organization, at which time you're booted into senior management.

Outside the corporate world, it's what you *do* everyday on the job that counts toward your success, not what degrees you hold or tests you may have once passed. You are limited only when your reach exceeds your grasp, and that's judged in the most practical way, by whether you accomplish the day's job or not. No other test matters.

>>If code speed is *vital*, a "must"
>>as you noted in your first paragraph, then why allow lesser mortals
>>on the air with a lower speed, or no speed as is the case for Tech?
>
>I never meant to imply that code speed was vital or a must, but I
>believe knowing the code is a must.

You haven't demonstrated a rationale *why* that belief should be generally honored.

>>Either it's something the government should require, or it isn't.
>
>No, I disagree. That kind of opinion implys that everything should be
>completely equal and it is not. For instance, does the government
>require that all civil servants know how to type? You are required to
>know what you need to know or MAY need to know.

Right, but the higher class bureaucrats, with more privileges, don't need to know how to type, they have underlings for that. The rote manual skills are delegated to the lowest class peons in the organization. Similarly, an amateur doesn't need to do high speed Morse, there are machines that can do that, or other better codes.

>>Just as you can't be "a little bit pregnant", a government mandate
>>should be uniform, or it's not justifiable at all. There's no
>>qualitative difference in the privileges of a General and an Extra,
>>just a small quantitative difference in subbands.
>
>That is a quantitative difference. You have more radio specturm
>avaliable for your use. Also, does that mean that every driver needs
>to pass a test to receive a CDL just to drive a car? We have different
>driver's licenses with different tests. We could go on and on with
>examples. In this case, the HF bands are the equivalent of the CDL.
>If you only want to drive a car, you can take the passenger car
>driver's test. But if you only have this class of license, you do not
>get to drive a car. Should someone that passes his or hers FAA test be
>automatically entitled to fly any kind of plane? The more training,
>the more skills, the more benefits - just like ham radio.

No, not just like ham radio. In the case of drivers and pilots,
the lower classes are limited in what they can *do*, not where
they can do it. If people with just a Class II drivers license
were banned from the interstates, and only those with a Federal
CDL were allowed on the interstates, regardless of what they
were driving at the time, then you'd have a more apt analogy.

>>Which is the necessary and sufficient test speed? Is it 13 or is it
>>20? Or perhaps it's 5, or 0, where do you make the distinction between
>>"must" and "it would be nice if"? And what's the government doing
>>involving itself in "it would be nice if" anyway?
>
>Just like your job, someone determined what your skills should be for
>the job. Should it be this or that or this and that? Someone had to
>make a deicision on what was reasonable.

Yeah, in my case it's the client, and he makes that decision every
time I do a job for him. He wants results at a good price, as long
as I deliver that, he doesn't care what tests I may have passed once
upon a time.

>Someone made the decision
>when it came to the code. I'm tired of too many lazy people whining
>about the code. Lazy in that they will not spend the time and work
>hard to learn it. I think it is a symptom of today; nobody wants to
>work to achieve. They just want everyting handed to them.

Ah, so we're back to the empty "effort" argument at last. I suspected
as much. If it's effort you want, Alabama has lots of big rocks they
want made into little ones, and a chain gang to do it. Guess they
should all get their Extra, eh?

>

You mentioned that you are using the headset with the IC-A21. I would assume that you are using something to interface the headset to that radio. I have an HS-61 switch box to use my D/C 13.7 with my A21. That box will connect to my FT-470. The only difference is that the FT-470 doesn't provide sidetone, but it does transmit and receive. I have used it several times.

The Icom HS-61 runs about $75. I bought it for use with both the A21 and my Yaesu. I didn't want to build something for this.

Does anyone know what the current state of the art is in terms of Garage Door Opener Transmitter technology is?

I mean- it used to be you could drive through the neighborhood and press the opener for your own door and a couple of neighbor's might open too.

What are the chances of this happening with new transmitting systems or with someone who's got some sort of variable bandwith transmitter to spend 10 minutes trying 5000 different frequencies?

The 13th annual Sonoma County Radio Amateurs Inc. Flea Market and Auction will be held Saturday Sept 16 at the Holy Ghost Hall, 7960 Mill Station Rd, Sebastopol, CA. That's about an hour north of San Francisco's Golden Gate bridge, in the Sonoma County wine country.

* Free admission and parking
* Sellers $10/space, either indoors or outdoors
* Free door prizes
* FCC license exams, all classes

Doors open at 7:30 AM, seller set-up starts 6:30 AM. Auction around noon.
Seller tables provided for indoor spaces only.
Directions: From Sebastopol, go north on Calif route 116, turn left on Mill Station Rd and the flea market is on your right.

Seller pre-registration can be sent to SCRA, POB 116, Santa Rosa, CA 95402. Include a check for $10/space and indicate whether indoors or outdoors.

For more information, call Rick Reiner K6ZWB 707-575-4455 or

CEEARS (Commonwealth Edison Employee Amateur Radio Society) retransmits on 145.35 Mhz most shuttle missions. The problem is that the transmitter has been going through tubes due to 100% duty cycle when doing a shuttle mission. They are very expensive and so the club is looking into alternatives. Therefore, the retransmission may not occur for every mission. Most of the Chicago area should have no trouble hearing the repeater when do retransmit. Hope this helps.

121.5 Mhz is the Civil Air Emergency Frequency but, AFAIK, is not monitored continuously except by aircraft over the oceans. In fact there is a high level of interference over land (at least in Europe) which tends to mean that the channel is ignored (aircraft usually work on the local Air Traffic Control channel). 243 MHz is the NATO military equivalent. Neither frequency is authorized for land use by ITU Regulations.

Yes, but they do go back to wire telegraph days before radio. And meanings
have changed a bit over the years, or with different telegraph companies.
For instance 73 is today "best regards"; but in some old telegraph books
I have seen it rendered "please accept our sincere compliments".

4366. Re: 73, 88, Where did they come from?

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-08 00:00:00 UTC
From: morawski@starbase.mitre.org
Message-ID: <MORAWSKI.95Sep8081053@starbase.mitre.org>
Source record: 239034

I thought that 73 and 88 are called "numbered radiograms".

Traffic handlers use them to send pro-forma "standard" messages quickly.

Another example: 50 --> "Greetings by Amateur Radio"

For a complete list, check the back of any ARRL Logbook.

Any old-timers have a clarification on this?

Paul Morawski, AA3DD

>
>Greetings...recently acquired the IC 2340H and would like to use it on my
>CSI Repeater Controller...can anyone tell me where I can pick up discriminator
>audio? Tried line 3 on the mic connector, worked but not as well as I thought
>it should. Any information would be greatly appreciated....73....Roger

Roger,

forward your message direct to ICOM at 75540.525@compuserve.com.
I am sure you can get onto a pin of either the VHF or UHF detector chip,
Just can not remember the chip number or which pin. Also the detector
audio on the mic connecotr is UHF detector and is not easily changed to VHF.

73' Gary KF7XV

>ITU Regulations.

121.5 is well monitored all over the U.S. for supporting aviation distress calls as well as ELTs. The frequency is in the aviation service but is designated as an international distress frequency for maritime use as well. It's use on land for distress purposes would be considered legitimate.

The problem with how flight service and air traffic control monitor the frequency is that they might not be able to hear a call for a low power radio in, just as an example, a remote canyon. It should also be noted that aviation ground facilities and airplanes are looking for AM signals.

While there is no requirement that general aviation aircraft guard the channel, many pilots do. I monitor 121.5 on long, cross country trips for a couple of reasons: I don't like to listen to a lot of radio chatter while enroute, when I don't have to, and 121.5 is usually quiet. I don't have to figure out and dial something in if I need help. And I might hear something while at altitude that ground stations might not.

Digital pagers should be OK except as noted below. However, voice pagers that transmit a spoken message would clearly violate the rules concerning re transmitting amateur communications on other services.

In article <mmusick-0509951013020001@198.102.74.50>,
mmusick@talx.com (Mike Musick) wrote:

Date: 1995-09-09 00:00:00 UTC
From: brian.carling@acenet.com
Message-ID: <2a6.21674.545@acenet.com>
Source record: 238892

BC>>Ah well, Zack... in the final analysis, I go by common amateur
BC>>usage, whether the pedants like it or not!

JW>Ten-four good buddy!

JW>(What's really shocking is that Brian, as an Extra class licensee, presumabl
JW> knew the correct answer to this question at one time. Oh well, I *suppose*
JW> 45 isn't quite too young for early senility to set it.

John - go cram it up your waistcoat, you stupid oaf!!
You make Burt Fisher look like he was right after all about hams
(shudder!)

This group has an astounding number of lame-brain idiots like you that
have nothing better to do than argue like babies going:
"Tis - Tisn't, Tis - Tisn't" all the time. How pathetic! No wonder
so many hams prefer contesting to ragchewing!

Your attempts to "prove you are right" without allowing for the other
person's choice of understanding something, show that you, and others
like you are full of pride and arrogance. Your pathetic argument is
nothing beyond, "which came first, the chicken or the egg?" Although
anyone intelligent knows it was the chicken(!)

As far as I am concerned, morse code is just that, a code. It is a
binary code with on off keying used to send this digital signal.
Amplitude modulation involves modulating a continuous carrier signal.
AM is A3 voice modulation of a carrier. Now if you want to talk about
_A2_, and you are all probably too young to remember the days when we
enjoyed THAT wonderful mode, with it's low background noise, then THAT
IS CW that IS amplitude modulation.

No matter how annoyed you get, how rude you get or how angry you get,
you cannot alter the fact that most hams refer to A3 as Amplitude
Modulation. Listen to 3880 kc any evening and you will hear it if you
have never heard it before. Listen to your AM medium wave radio. That
is amplitude modulation. Then go listen to 7035 kc. That is CW.
A1 - on and off keying of a single signal RF wave. No modulators
allowed there on 7035, he he!

We do not refer to CW as "AM" nor do we refer to packet or SSTV as
"AM", even though by YOUR understanding, they would be AM. This is
amateur radio, not "The PHd Bigot Pedants Club!"

No doubt you and others like you will next claim that AM is really a
digital signal because the operator turns the carrier on and off
with his PTT switch.

BTW - you forgot one: SSTV is really an FM signal, and an AM SSB signal combined.

Oh and last but not least, EVERY time you QSY, you are transmitting an FM signal, and when your rig is off all night it is really transmitting one state of an "amplitude modululation" CW signal - the "OFF" state. Feh!

73 de AF4K Brian Carling, A.E.E.T (and proud of it!)

p.s. Before you grumble about this message, I will say this:
"Don't dish it out if you can't take it."

Will normal
> Quartz work or is Galena the only option?
>
Scott, your reference to quartz suggests you may be confusing the crystal detector used in old-time receiving sets with the quartz crystals used in transmitters to control the transmitter's frequency. The two functions are completely different, and what you are after is the crystal detector. In the old days this consisted of a chunk of galena (an ore of lead -- or other mineral such as carborundum) held in a clamp with a so-called cat whisker, which was a thin spring copper or brass wire with a movable handle in a kind of ball joint that made it possible to feel around on the galena surface with the wire until a sensitive spot was found and detected radio signals appeared in the earphones.

To me as a boy crystal set constructor it was the magic of scratching around on the crystal until I quote found unquote a radio station that gave much of the thrill. The other part of the thrill was that no battery or other power was needed. It would run forever, free!

If you just want to hear the radio without the nostalgia you can get a fixed crystal detector (such as the 1N34A, try Radio Shack) in which a connection is already attached to a germanium crystal at the factory. This tiny gizmo is permanently sensitive, requiring no adjustment, and you just connect the leads into your circuit and forget about it.

It's generally possible to hear radio stations with little more than an antenna, a ground, a crystal detector and a pair of earphones, but you'll probably hear more than one station at the same time. Using a fixed coil and variable capacitor (or a variable coil and fixed capacitor) helps tune in a specific station. Most crystal sets, however, are famous for their inability to tune sharply and separate strong stations if more than one is nearby.

I'm sure you can find some instructions and designs for building crystal sets in your public library in a book with projects for electronics beginners. (Sometimes it's great to become a beginner again!).

Good luck.

>mhz.. Is this something that falls under the "Good Amateur practice" clause, or is
>it something that is covered by a section of part 97 that I have either misread, or
>do not understand..

Repeater operation isn't permitted below 29.5 MHz, and since much of
the FM operation on 10 meters is related to repeaters, that has become
a defacto cutoff frequency. However, F3 emission is permitted below
29.5, in fact basically everywhere A3 emission is permitted (with a
couple of exceptions). However, there's another restriction on F3
emissions below 29.0 MHz, they must not occupy more spectrum than
an A3 emission. Since that's narrower than traditional amateur NBFM,
little FM activity can be found below 29.0 MHz. The FM capture advantage
disappears at small deviations, so there's no advantage to using FM where
deviation is strongly limited.

There are basically *no* rules prohibiting retransmitting amateur
communications on other services. The prohibitions are the other
way, prohibiting amateurs from retransmitting signals of other
services over amateur radio.

Source record: 238908

When I was in elementary school, I used to get picked on quite a bit. I also had a strong need to respond to all the remarks the kids made.

Then one day, I wised up and decided to ignore their comments and began defending myself.

Soon enough, the kids stopped bothering me. They went away.

As for Burt, I think the best defense for ourselves, the newsgroup, and anything else Burt is involved in which can make us look bad is to ignore him.

He has gotten what he wanted - publicity and our attention.

I think it is about time we turn off Burt, turn our attention back to the matters we really care about (like ham radio), and redirect this newsgroup back to its intended purpose - Amateur Radio.

Enough said.

This service is experimental. It contains a warning that it should not
be used for real legal work because it is not up to date. Just about
everything on it is at least a year or more old.

While I might agree with you there, in some cases where a person knows what they're doing it's not a big deal to get a phone patched into your mixing board. We did it at WDOM back in the mid-80's without too much trouble. Unfortunately I forget the details and the board was one of those ancient Dukane models.

So why not go one-up on Ma Bell? Find an old 500 or 2500 set and hack the hybrid network out of it. Of course I don't have a schematic handy but I would imagine there's one over in the telecom archives at MIT.

K1OIK is not the author of what follows.
I am sending it around some more because I found it interesting:

I spent several weeks last summer researching and verifying a rather thorough and accurate list of celebrity hams which I subsequently published in the 1994 CQ Amateur Radio Almanac.

You'll find the list on page 426.

Here's a copy...

This list includes widely-known personalities who are (or were) public figures, and who would be recognized by an average person. Many prominent businessmen, local radio/TV personalities, and mid-ranking government officials are also licensed amateurs, but they are not listed here, in the interest of protecting their privacy.

Several lists have propagated through the amateur community from time to time often with errors. For example, some lists claim N6KGB was actor Jimmy Stewart, when the call was really held by another well-known actor: Stewart Granger (whose real name was James Stewart, and who became a Silent Key in 1993). Many lists claim that Russian cosmonaut Yuri Gagarin was a ham (some lists even claim his call was UA1LO); there is no hard evidence that he was ever licensed. Another rumor insists that musician Jon Bon Jovi is a ham. He is not licensed but his cousin, record producer Tony Bongiovi, is KX2Z. Other lists indicate that musician Jose Feliciano is a ham; WP4CO's name is definitely Jose Feliciano, but he's not the famous musician. Donny Osmond was once licensed as KA7EVD, but his license has expired - another Donald Osmond holds the call WD4SKT, but it's not the same person. KD6OY insists that his name is really Garry Shankling, not Shandling, even though he lives in Los Angeles. And WA7WYV's name is indeed Andy Griffith, but he's never played either Andy of Mayberry or Matlock on television.

Royalty

Juan Carlos I de Borbon y Borbon, EA0JC, (1938-), King, Spain
Bhumiphol Adulayadej, HS1A, (1927-), King, Thailand
Hussein I, JY1, (1935-), King, Hashemite Kingdom of Jordan

WHAT IS C W

* It is a unique,intimate,concise and effective communications skill still employed throughout the world.

* It is the most efficient mode in terms of power required for long-distance communication ,least susecptible to interference,and conserving of the radio frequency spectrum.

* It involves no accent or pronunciation problems,therefore providing a widely understood international language.

* It employs simpler,more reliable and easily maintained equipment than any other communications mode.

* It is an equalizer,negating age,speech impediments and dialectical differences;it provides for ready acceptance of youngsters in an adult enviornment.

* It is the ONLY radio communications mode that is understood readily by both man and machine.

Please note : the above article was submitted for packet by N1CNS as a reminder that it is a serious and viable means of communication. Any responses may be sent to me WA1HVD @ KA1AZ.RI.USA

4397. The real Ham Code of honor?

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-09 00:00:00 UTC
From: k1oik@ccsnet.com
Message-ID: <7977-303613203@ccsnet.com>
Source record: 238915

The Radio Amateur is:

CONSIDERATE...never operates in such a way as to lessen the pleasure of other's. (unless of course it is a contest).

LOYAL...Offers loyalty, encouragement and support to other amateurs, local clubs, and the American Radio Relay League, through which Amateur Radio in the United States is represented nationally and internationally. (unless of course money is involved or in many cases little support shall be given if the ham is old (almost always the case) and the new ham is young).

PROGRESSIVE...with knowledge abreast of science, a well built and efficient station and operation above reproach. (unless of course you have any money the you become an "appliance operator").

*FRIENDLY...slow and patient operating when requested; friendly advice and counsel to the beginner; kindly assistance,cooperation and consideration for the interests of others. These are the hallmarks of the amateur spirit. (unless of course it is a flea market (every man for himself).

BALANCED...radio is an avocation, never interfering with duties owed to family,

job, school, or community. (this is rarely true. A good contester will leave the family on Christmas if there were a contest, a local kid, known as "The breather" sits by his "hamradio" day and night talking to anything that comes along except of course a girl. Finally the only thing most hams will leave their "ham radio" for is a cup of C O F F E E.

PATRIOTIC...station and skill always ready for service to country and community. (unless there is DX around or a contest, in such cases it is accepted to ignore any emergencies).

The Story of Digipeter Rabbit -- a No Code Fable
By Frank Terranella, N2IGO

Once upon a time, in the far-away kingdom of Radio, there was a peaceful valley called Hamville, inhabited by a group of rabbits. Hamville was originally settled by the Whiskey family, and the patriarch of that family was an old hare called Charlie Whiskey.

Charlie Whiskey was a farmer by trade. He came to the beautiful valley of Hamville when it was all open meadows. He saw the potential for farming the vacant land and over time he developed a thriving carrot plantation. Charlie Whiskey's carrot plantation was the envy of all the inhabitants of the kingdom of Radio. He succeeded year after year in producing a bumper crop of carrots. All the other residents of the kingdom came to Charlie for advice on planting carrots. Charlie would always tell them, "The secret's in developing a good ear." No, Charlie didn't have superior hearing, but he had developed a very special skill. You see, Charlie picked his carrots with his ears.

In fact, Charlie had worked hard at perfecting this skill and was able to harvest at better than 20 carrots a minute. All of Charlie's family learned to pick carrots with their ears. Soon they were all picking at better than 20 carrots a minute. Charlie was so proud of his special skill that he insisted that everyone who came to work at Hamville first show that he could pick carrots with his ears. Charlie would not give new settlers any land unless they could demonstrate to his foreman, Victor Echo, that they could pick at least 5 carrots a minute with their ears.
When they could pick 13 carrots a minute, Charlie gave them more land to work. When they were able to pick carrots by ear at the rate of 20 a minute, Charlie made them full citizens of Hamville.

This process of learning to pick carrots with your ears went on for some time. In other parts of the kingdom of Radio, other rabbits began to pick carrots by ear. However, there were some noisy ducks, known as the Quackers, who lived in the community of Good Buddy. They used their mouths to pick their crops instead of their ears. They had much larger mouths than the rabbits and saw no need to use their ears. The rabbits all looked down on the Quackers. "We must always require ear harvesting skills for entry into Hamville," they said. "That way we will keep out those noisy Quackers." So everyone who came to Hamville had to learn how to pick carrots by ear if they wanted to stay. Charlie Whiskey was adamant about that. "If you don't want to learn the skill of ear harvesting then go work in Good Buddy with the Quackers," he would say.

And so the years passed, and new methods of farming were developed. These new methods were easier to learn than ear harvesting, especially for the animals who didn't have the big ears that the rabbits had. What's more, the new methods were just as efficient as ear harvesting. As time went by, fewer and fewer of the young animals were willing to learn the skill of ear harvesting. The population of Hamville began to dwindle. All the residents of Hamville were getting on in years. To make matters worse, there were new neighbors nearby who coveted the beautiful open farmland of Hamville. They wanted to come in and turn it into commercial uses like shopping centers. And worst of all, the pollution from the Quackers, the other Rabbits, and the Mice (known in Hamville as the QRM group) was having an adverse effect on farming in Hamville. The future looked bleak indeed.

Then, one day, a stranger called Digipeter Rabbit came to Hamville. He was an educated rabbit who had studied at the School for Scientific Bunnies (SSB). He had majored in Farm Mechanics and knew all of the latest scientific agricultural methods. But for all his education and know-how, there was one thing that Digipeter could not do. He could not master the skill of picking carrots with his ears. And since he already knew how to pick carrots more efficiently with new scientific methods, he was not interested in learning.

Charlie Whiskey was outraged. "What do you mean you won't learn to pick carrots with your ears? Why, we in Hamville have been picking carrots that way for 75 years. It's a tradition here. It shows that we're special and that we're better than the Quackers. If you don't have the desire to develop a good ear, then we don't want you here in Hamville."

But Digipeter was adamant. He saw no reason to learn an obsolete skill just to stay in Hamville and he refused to even try. Charlie Whiskey took the matter to the Ancient Royal Rabbit League, which he had founded. The ARRL decreed that everyone in Hamville must learn to pick carrots with his ears or be banished. And so Digipeter Rabbit left Hamville and founded his own village called Techietown.

Soon, all the young animals in the land of Radio were flocking to Techietown. But Digipeter had his own entrance requirement. A good ear and a good memory were not enough for him. No one could stay in Techie-town unless he could demonstrate technical knowledge, understanding and ability, and the desire to contribute to the advancement of Techietown.

Digipeter encouraged all the residents of Techietown to experiment in the cultivation of new unexplored lands, never before farmed. Digipeter showed them how to overcome pollution problems. He showed them how to use the land they had more efficiently. Digipeter even perfected a method of farming which allowed a number of rabbits to farm the same land at the same time. And while the residents of Hamville were picking 30 carrots a minute on a good day, in Techietown, harvests of 300 carrots a minute were possible. Using Digipeter's methods, and those developed by the other bright, young residents, Techietown soon became the most prosperous village in the kingdom of Radio. This did not escape the

notice of the Field Carrot Council, which governed the kingdom of radio. To reward the residents of Techietown for their contributions to the kingdom, the Field Carrot Council gave Techietown more and more land to work, until its borders touched those of Hamville.

Meanwhile, Hamville was still plodding along as it always had, oblivious to the revolution in farming occurring around it. The old hares still picked carrots by ear. The Ancient Royal Rabbit League complained bitterly to the Field Carrot Council about all the new land it was giving to Techietown, but the population of Hamville continued to drop. When the Field Carrot Council gave 2 acres of Hamville property to Techietown, the residents of Hamville began, for the first time, to be genuinely concerned about their plight. Some even dared to ask the Ancient Royal Rabbit League to change its mind about the need to learn to pick carrots by ear to live in Hamville. "We need new blood here to fight off the Field Carrot Council," they said. Charlie Whiskey, now in his nineties, was furious. "We have to maintain our standards. We don't need those smart young bunnies, we need rabbits skilled in our time-honored harvesting techniques. We need rabbits who are dedicated enough to the principles of Hamville to want to learn our methods. If a rabbit really wants to live here, he'll learn our ways. If he doesn't, we don't want him. You don't want those Quackers to move here, do you?"

But by now the residents of Hamville had seen the writing on the wall. Although they genuinely enjoyed picking carrots with their ears, they realized that there were now other ways which yielded just as many carrots. And though they would probably continue to pick carrots by ear as they always had, they could no longer shun those bright young rabbits who chose a more modern method. A group of rabbits, led by an elder statesman rabbit named Elmer, who had once served in the government of the kingdom of Radio, asked the Ancient Royal Rabbit League to change its policy. The League agreed and issued a decree that henceforth ear harvesting skills would not be required to become a resident of Hamville.

When Digipeter Rabbit heard of the decree, he sent envoys to Hamville with all the latest scientific discoveries, which he shared freely with the residents. The residents of Hamville seized upon the new knowledge and soon Hamville became revitalized. Its population began to increase as young rabbits were attracted to its bountiful open farmland. The Field Carrot Council, impressed by the renaissance in Hamville, did not take away any more of its land, but actually gave some new territory to Hamville. Everyone was amazed at the new vibrancy of Hamville.

Charlie Whiskey, though sad that his beloved harvesting method was no longer in vogue, saw that his people were prospering and was glad. And to show that there were no hard feelings, Charlie Whiskey sent Digipeter Rabbit a packet of 73 carrots which he had picked himself -- with his ears.

The residents of Hamville rejoiced and declared a festival to celebrate their new prosperity. And over the front door of the Hamville Festival they put a banner, which read: "A bunny's worth is measured not

by the skill of his ears, but by what lies between them." The residents of Hamville had learned an important lesson.

-THE END-

Formulating a computer-virus control strategy would be easy
if all we had to deal with was computer hardware and software.
However, computer-virus control is really a people issue.
Regardless of how much money you spend on anti-virus
products, your virus protection will only be as good as your
last backup.

Regards.

4401. FM Voice use below 29.5mhz

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-09 00:00:00 UTC
From: james-m@ix.netcom.com
Message-ID: <42r4ht$ntc@ixnews6.ix.netcom.com>
Source record: 238919

I need a little help getting something straightened out in regards to the use of FM voice on freqs below 29.5mhz. I seem to recall a question on my Advanced written that asked why FM voice was not used below 29.5mhz, and also recall that the correct answer had something to do with excessive bandwith. I have read, and reread part 97 and can not find nothing that limits the use of FM Voice below 29.5 mhz.. Is this something that falls under the "Good Amateur practice" clause, or is it something that is covered by a section of part 97 that I have either misread, or do not understand..

Thanks
Don

_No_ transmission should be made between 29.300 and 29.510 because of satellite downlinks (RS-10, RS-12, RS-15 right now). Below 29.300, FM is ok, but below 29.0, the bandwidth must not exceed the bandwidth of an AM signal.

(Can be found in "The FCC Rule Book" (ARRL), chapter 5)

BTW: This is a voluntary band plan approved by ham radio organizations of many countries (yet there are differences) and is not covered by part 97. But "voluntary" does not necessarily mean that you can choose if to do accordingly - doing so is "Good Amateur Practice"...

Source record: 238925

The TS-870 was released yesterday.
I played with it today at Norham Radio in Toronto.
It is great. I am a TS-850 user, and this new radio looks great.
The DSP, auto-notch, auto noise reduction, and variable AGC really make
the 870 stand out.
They have even added little touches, such as putting the little dimple
back in the tuning knob.
Meyer.

4410. Surplus FM radios/deviation, etc.

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-09 00:00:00 UTC
From: broehrig@admin.AUrora.EDU
Message-ID: <Pine.3.89.9509081901.A11279-0100000@admin.aurora.edu>
Source record: 238974

What someone said about not being a good idea to put a resistor in series with the mic line is quite true. To reduce the maximum deviation on a FM transmitter you must reduce the level of the audio AFTER the clipper/ limiter, just before it is applied to the modulator.

I remember years ago when one of the surplus outlets in Chicago was selling "brand new" BC-603 receivers for about $25.00 (with a complete set of spare tubes). These receivers tuned from 20 to 27MHz (FM) and had a bandwidth of 80 kHz (I believe). We wanted to use them as a tunable IF behind the Mallory "inductuner", which was a continuous tuning VHF-TV front end for TV's with a 21 MHZ IF. In this way we could fix the TV tuner at a certain frequency and then use the 10 push buttons on the BC-603 to receive our local police, fire, etc frequencies. (This was WAY before scanners, folks).

We were able to narrowband the receiver by removing the swamping resistors that were across the IF transformer windings. Just what the final bandwidth was, I don't know, but it sure sharpened up that receiver. The hard part was that these resistors were inside the IF cans so they needed to be removed from the chassis to do this. This was especially "fun" as the unit was liberally coated with a fungus proofing type coating which really tested one's soldering skills!

In later years I used the same receiver with an Ameco nuvistor 2 meter converter to drive a Doolittle (now there's a name) deviation meter. The receiver was quite stable.

Saw a piece on the local TV news recently about "code grabbers" used by
thieves. They just park near your house and wait until you open the
door. The code grabber "grabs" the digital information and can then
open the door for them on the first try. Heck, you might be able to
approximate that with a small radio and tape recorder. (?)

They would make it foolproof if fools weren't so ingenious.

Does anyone out there have a schematic & manual for a Robot model 70
SSTV unit? Will re-imburse for copying/postage...........

I don't plan to use it for SSTV but it is such a "neat" box that I
thought I might use part of it for a RTTY tuning scope or something.

Appreciate any help - de K9EUI

What someone said about not being a good idea to put a resistor in series
with the mic line is quite true. To reduce the maximum deviation on a
FM transmitter you must reduce the level of the audio AFTER the clipper/
limiter, just before it is applied to the modulator.

I remember years ago when one of the surplus outlets in Chicago was selling
"brand new" BC-603 receivers for about $25.00 (with a complete set of
spare tubes). These receivers tuned from 20 to 27MHz (FM) and had a bandwidth
of 80 kHz (I believe). We wanted to use them as a tunable IF behind the
Mallory "inductuner", which was a continuous tuning VHF-TV front end for
TV's with a 21 MHZ IF. In this way we could fix the TV tuner at a certain
frequency and then use the 10 push buttons on the BC-603 to receive our
local police, fire, etc frequencies. (This was WAY before scanners, folks).

We were able to narrowband the receiver by removing the swamping resistors
that were across the IF transformer windings. Just what the final
bandwidth was, I don't know, but it sure sharpened up that receiver.
The hard part was that these resistors were inside the IF cans so they
needed to be removed from the chassis to do this. This was especially
"fun" as the unit was liberally coated with a fungus proofing type
coating which really tested one's soldering skills!

In later years I used the same receiver with an Ameco nuvistor 2 meter
converter to drive a Doolittle (now there's a name) deviation meter. The
receiver was quite stable.

Bob, K9EUI

FREE - NEW Macintosh HAM TEST SIMULATORS

Studying for a ham test and have access to an Mac?

Upgrade Fast! Simulate the test and get S T I M U L A T E D!

Scores of 90% or > even get applause!

The new Macintosh Ham Test Simulators are HERE (and there if you can FTP)!

o Novice Ham Test 5.0 SA.sea
o Technician Ham Test 5.0 SA.sea
o General Ham Test 5.0 SA.sea
o Advanced Ham Test 5.1 SA.sea
o Extra Ham Test 5.0 SA.sea

The latest version "5" feature:

HyperCard 2.3 as a stand-alone application (SA) eliminating
your need to have HyperCard. All you need is a Mac with 4
Meg of memory and version System 7 or greater.

Each version "5" Ham Test Simulator has the latest questions
as prepared by the Question Pool Committee.

Each version "5" Ham Test Simulator is FREE OF CHARGE and work the
same way as the originals did (written by Diana, KC1SP).

You may obtain a version "5" Ham Test Simulator by mailing me a *FORMATTED
disk (1 per test) and include a Self Addressed and Stamped disk mailer for
the return.

Each version "5" Ham Test Simulator is also bundled with a shareware CW
program called MacMorse 1.4 written by Doug, WB0EON.

Also included in the version "5" collection are text files that relate an
interesting variety of ideas about the best way to study CW and prepare
for tests.

Or warm your phone line and get JUST the tests:

America On Line - Macintosh Ham Radio Section

or:

The following is a QST

The Germans prepare to take a repeater into space, the FCC says
it will be getting smaller and a fifteen year old ham is honored

for his community service during the 1993 midwest floods. These stories and more on Newsline report number 942 coming your way right now!

(*****
GERMAN REPEATER HEADED TO SPACE

A full blown open UHF FM voice repeater will soon be on the air from space! The Germans are putting it there. It's called Safex Two, and the first section of this repeater will be carried to the Russian MIR space station by German Cosmonaut Thomas Reiter, DF4TR. This, when he arrives on MIR for the European Space Agency's EUROMIR 95 mission that's scheduled to begin as this newscast goes to air. The rest of the system will be carried to MIR in the course of several missions over the next few months. The 70 centimeter space repeater, actually an FM transponder, was built by Thomas Kieselbach, DL2MDE. Initially it will be FM only with downlinks at 437.925, 437.950, and 437.975 MHz, and an uplinks in the lower part of the 435 MHz space communications subband. Safex Two will later be improved adding a 23 centimeter to 13 centimeter transponder, capable of broad bandwidth modes including fast scan ATV.
The German design team has not announced a date when the Safex Two orbital repeater will come on line, but using it will not be the same as using your favorite local machine. While it will give coverage over hundreds if not thousands of miles, you will need the plenty of power and ability to computer track the MIR space station with a beam antenna in order to use it. Alternatively, hams might consider setting up gateway repeaters, FM repeaters on any band tied to other repeaters with the ability to track the MIR. This, so that any ham with a handheld can enjoy the soon to be on the air repeater in space.
In the meantime, regular users of MIR can talk directly to DR4TR who will be on the air using the call sign DP0MIR on the normal 2 meter frequencies of Primary frequencies of 145.800, 145.550, and possibly 145.200 MHz. These frequencies were adopted as standard for MIR and SAREX shuttle activities at the IARU session of this year's AMSAT-UK Colloquium. QSLs for contacts with this mission will be handled via the usual German DARC QSL bureau.

(*****
FCC DOWNSIZES

The federal Communications Commission may downsize and close its monitoring stations. This could have a serious impact on Amateur Radio as we hear from Paul Courson WA3VJB in Washington:

The FCC may automate all nine of its monitoring stations across the country and run them by remote control from its facility near Washington. And personnel layoffs proposed by FCC Commissioner Reed Hunt would be another side affect of budget cutting in

congress.
Hunt told the Washington Post, He sees a mandate from lawmakers to make the agency smaller. Hunt would fire 180 workers under the plan and close a dozen regional and field offices by this time next year.
If the downsizing is carried out, it would be the largest payroll reduction in the 51 year history of the FCC. But Hunt says even if the cuts in fact are carried out they might not last.

He said telecommunications rules are changing. And that more people will eventually be needed to oversee those changes. He said as many as 80 additional responsibilities could come from the Telecom Legislation recently past by the House and Senate. The bill has yet to become law. At the same time the House has proposed freezing the commissions budget for next year. No word yet what the Senate might do with the FCC's budget. The issue faces lawmakers when they return from the August recess.
But Hunt is acting on a worst case scenario in the meantime. He would close nine of twenty five local field offices responsible for resolving interference complaints. He would also close half the regional field offices of the FCC. Cutting Atlanta, Boston, and Seattle from the six the agency now has.
As for the monitoring stations, the FCC Commissioner believes all nine can be operated remotely by the agencies main tracking facility at Gilford, Maryland. That is about fifteen miles outside of Washington.
Hunt says he would preserve the enforcement workforce. While cutting jobs in public affairs and administration. The FCC in recent years has shied away from initial direct action on complaints in the amateur service. Directing reports instead to a volunteer core charged with building a case. It's not yet clear wether the FCC might distance further from many intervention disputes on the ham bands. Leaving it up to hams themselves to settle things or put up with problems.

Again, Chairman Hundt is talking about a worse case scenario. Only time will tell how far the downsizing will have to go.

(*****
OKLAHOMA HAMS PRAISED

Ham radio has received words of praise for its part in relief efforts following last springs terrorist bombing of the federal building in Oklahoma City. Oklahoma Senator Don Nickles has entered into the Congressional Record a tribute to volunteers who helped in the aftermath of the April bombing of the Murrah Federal Building in Oklahoma City, including Amateur Radio operators.
In his remarks, Nickles cites an outpouring of love, selfless effort, and resources. He says that the community is indebted to those volunteers who created a silver lining to the dark cloud of the tragedy.

Specifically Nickles says that Amateur Radio operators provided an essential service to rescue operations. Within minutes of the attack, operators were on the scene providing an emergency communication network that allowed for the organization of supplies as well as firemen, policemen, and rescue crews from countless communities.
Their contribution of 360 hours of service, Nickles was says was made possible by donations from electronics companies such as the Oklahoma Community Communications Center.
Senator Nickles's remarks were published in the August 11th Congressional Record.

(*****
YHOTY '95

A fifteen year old from Alton, Illinois has been honored as the 1995 Newsline Young Ham of the Year. Adam Weyhaupt, N9MEZ, received the honors August 19th at the recent Huntsville Hamfest Banquet.
Adam was chosen for his many contributions to the community through the use of amateur radio. During the midwest floods for 1993, Adam who was thirteen at the time, was in charge of scheduling hams for round the clock emergency communications. He also handled net control duties for a local disaster net.
The following year, Adam served as a key communications organizer for the fifteen day U.S. Olympic Festival in St. Louis. And if that is not enough, Adam acts as a net manager for a local emergency service net. He is active in the local Skywarn Network and edits a regional Skywarn newsletter.

"The hobbies can be an important part of a young persons life. It gives them valuable life experiences and provides them the opportunity to meet a wide variety of people.
Ham radio is certainly a unique hobby, by these standards. It is one of the few hobbies where you can have a good time and yet help so many people. And while you should certainly have a good time, I strongly encourage all of you to use your communications talents to help other people in whatever you can do. Because that is what ham radio is really about.
Whatever you decide to do, just jump in with both feet and do the best job that you can do. And people will remember you, because you have done such a good job and you will be helping many people." Adam Weyhaupt, N9MEZ.

As part of his award, Adam received the Yaesu FT-840 HF rig and FP-800 power supply from corporate sponsor Yaesu, USA. Chip Margelli, K7JA pays tribute to Adams many accomplishments.

"We feel that leadership is important to amateur radio because frankly as we all know in radio clubs leaders are hard to find. Leaders get worn out. Leaders are asked to do too many things. And yet when we have leaders full of enthusiasm, with new ideas we

think that is something that is good and should be encouraged."
K7JA

The Newsline Young Ham of the Year Award is sponsored jointly
by Newsline, Yaesu USA and CQ Magazine.

By the way, the nominating period for the 1996 10th anniversary
Young Ham of the Year award is now open. Nominating forms are
available from Newsline for an S.A.S.E. or can be downloaded from
the ham radio files area on Genie or America Online.

(*****
NEW ZEALAND YHOTY

The United States is not the only country that is honoring its
young hams. New Zealand has a very active awards program for its
younger radio amateurs.

For some years now NZART, the society representing radio
amateurs in New Zealand has conducted awards recognizing youth
achievement in amateur radio.
There are two youth awards made annually. An achievement award
for the best amateur radio examination result obtained by a
candidate under eighteen years old. And the Young Amateur of the
Year Award. Awarded to an amateur under eighteen years of age who
has demonstrated service to amateur radio in any one of a range
of fields of achievement.
Now this years Young Amateur of the Year Award was made to
eleven year old Pamela Blackert, ZL1WPB of North Shore in Auckland
City. Recently I asked Pamela how it felt to be Young Amateur of
the Year.

"It was very exciting and a big surprise and a great privilege
to win the Young Amateur of the Year for 1995 at the annual
conference." ZL1WPB

Well Pamela to the examination in September of 1994 while still
at primary school and just ten years of age. She completed both
her examination papers in just twenty two minutes. Tutored by her
father Dave, ZL1AD, Pamela is the third generation of Blackerts to
be licensed. Her Granddad was ZL2HD. Pamela attends local radio
club meetings and participates in the amateur radio emergency
organization. Within minutes of getting her callsign she was
active on the New Zealand National HF system.
She was also in regular contact with MIR on voice and packet.
She struck up a rapport with cosmonaut saying that she reminded
him of his granddaughter.

Newsline congratulates both of these youngsters on their
service to Amateur Radio and on their awards.

(*****
NEW VK 10 METER BAND REPEATER

Still in the South Pacific, VK5VB reports that Australia's Adelaide 10 meter repeater on 29.620 / 29.520 MHz is now operational. The repeater is located just South East of Adelaide and was constructed by VK5AH. Any QSL reports can be sent via packet to VK5VB@VK5LZ.

(*****
RSGB TO INAUGURATE SPECIAL MEMBER RATES

The Radio Society of Great Britain says that it has approved measures to reward long-standing members of the Society. When RSGB membership rates rise this fall, continuous members for 50 years or more will receive a 50% discount; 60-year continuous members will get a free ride for the rest of their lives. The RSGB also plans a new "Junior Membership" category. The RSGB, like its counterparts in other countries is raising membership rates as it faces rising costs of both paper and postage.

(*****
RSGB CON

And the RSGB International HF Convention will take place at Old Windsor in Berkshire on the 9th and 10th of September. The event will feature lectures and presentations from some of the world's top HF operators and DXers, including Roger Balister, G3KMA, who will give two presentations on the RSGB's Islands On The Air awards program.

(*****
RICHARD COTTON, W8DX, S.K.

Back in the United States, some sad news to report. Former FCC Detroit Field Office, engineer Richard Cotton, W8DX, has died. Cotton, 89, passed away on July 29th.
Richard Cotton was first licensed in the early 1920's, and held W8LEC before becoming W8DX. An active DXer, he was one of the first amateurs on the Oscar satellites and held satellite DXCC. A career veteran with the FCC he joined the Federal Radio Commission's Detroit office in the early 1930's. He was a government employee of the FRC and then the Federal Communications Commission continuously until retiring in 1971, finishing his career as engineer in charge.

(*****
ZIFF DAVIS AWARDS

Ziff-Davis Publishing has announced the 1995 winners of the Ziff-Davis Shareware Awards. This is an annual competition to recognizes the best in new or significantly upgraded PC shareware programs introduced during the previous year. The winners were honored at an awards ceremony Friday evening, June 23rd, during the Shareware Industry Conference in Scottsdale, Ariz.

(*****
DX-ET

In DX, word that Ethiopian station ET3AA frequents 14.224 MHz around 02:00 UTC. QSL him to Post Office Box 60258, Addis Ababa. On CW, look for ET3YU at the low end of 20 meters around 22:30 UTC. QSL this station via YU1FW.

(*****
HAPPY TOWER

And DXers with antenna problems will be happy to learn that not every tower is unwelcome. In fact, a tower raised to 100 feet over the small town of Wayland, Iowa, will benefit student hams at the town's school. The editor of Popular Communications Magazine has the details:

"The tower erected at the school late last month will support antennas for students who operate the schools amateur radio station, KB0SAL.
The tower was obtained from state surplus two years ago when it was taken out of service. The tower was erected near the Junior-Senior High Building in Wayland, Iowa and joins two other towers supporting antennas currently used by the school ham station.
Fred Haber, the schools Challenge Program coordinator planned and directed the project. Through the efforts of the Waco School District administrators and workers, permission was obtained to move the tower and its associated parts to the farm community of Wayland for use by the school ham station. With the new towers, student hams at the school will be able to broaden the access to the world in allowing them to meet and communicate with persons all over the world. Haber said a number of inter disciplinary projects involving students who are not hams also may be undertaken.
Haber cited that the benefit of having foreign language students communicate with Spanish speaking hams in Central and South America. Or having students enhance their geography lessons real world links to other states and countries. He also sees cooperative class projects in cultural studies, weather, soil and water resources.
The tower project actually became a community project in Wayland as residents with certain expertise helped with various stages of construction and the towns telephone company lent technical support from its staff. Adult hams from surrounding areas in Henry and Washington Counties pitched in as well as a half dozen student amateur operators.
In addition to benefiting the students the new tower will also benefit southeast Iowa hams. Packet will be digipeated off of the tower once the equipment is setup." Chuck Gysi, N2DUP

Chuck will have a complete wrap up on this story in an upcoming edition of Popular Communications Magazine.

(*****
ROSALIE WHITE JOINS YHOTY

Word that 1995 Radio Amateur of the Year, Rosalie White,
WA1STO has accepted an invitation to help guide Newsline's Young
Ham of the Year Awards program into the next century.
As most of you are aware, Rosalie is the manager of the ARRL's
Educational Activities Department where one of her duties is to
coordinates the leagues' continuing education workshops held at
conventions around the country. WA1STO is also a member of the
SAREX Working Group and in both positions she works very closely
with the educational community.
Rosalie White joins Rich Moseson, NW2L of CQ Magazine, Capt.
Larry Zettwoch, KR4IF of US Air, Keith Glispie, WA6TFD, of Fox
Television and Bill Pasternak, WA6ITF, of Newsline in serving on
the Young Ham of the Year Awards Steering Committee.

Hi !

i passed my licence tests in spring '95. At this time i was sure to
drop CW entirely after having passed the tests needed for our class
'B' licence, the 'highest' one here in Germany.
However, on a fieldday, 2 weeks ago, i watched fellow hams doing CW
and was fascinated by the distances covered with small power and
tiny rigs/antennas.

Back home i plugged my straight key, a german 'junker', into my
IC 728 transceiver and started again. Two days later i wkd JD1BIZ
with 50 watts into my cushcraft R7 vertical here from Hamburg, my
hometown.

Now i am beginning to practice with an 'elbug' and try to do 1 - 3
qso's in CW every day at least. Since there are almost no condx on
10 meters it's a very popular 'CW-training area' here and there are
OM's, local residents, to have a CW 'chat' almost every day.

Just 'two cents' from a newcomer, being happy with CW.

73 de Thomas [DF1HX]

ZCZC AP07
QST de W1AW
Propagation Forecast Bulletin 38 ARLP038
From Tad Cook, KT7H
Seattle, WA September 8, 1995
To all radio amateurs

SB PROP ARL ARLP038
ARLP038 Propagation de KT7H

Solar activity was off a bit over the past week, with the average solar flux down about five points from the week before, and average sunspot numbers down by over 26. Geomagnetic activity was mostly low, but there was a big increase in activity over the past few days caused by a recurring coronal hole. The K index rose as high as six, which indicates very disturbed conditions with dramatic absorption of HF radio signals.

Look for another peak in disturbed conditions around September 10, and continued low solar flux. Flux values should rise slightly and peak in the mid to high seventies around September 22.

Coronal holes, which are mentioned frequently in this bulletin are areas in the coronal layer of the Sun through which an unrestricted flow of high energy particles passes into space. When the earth moves through one of these streams, the geomagnetic field is disturbed and the ionosphere is neutralized by protons. Coronal hole activity tends to occur more during the downward trend and at the bottom of a solar cycle, which is where we are right now.

Sunspot Numbers for August 31 through September 6 were 18, 13, 11, 11, 23, 11 and 11, with a mean of 14. 10.7 cm flux was 75.6, 73.7, 73.3, 73.6, 74.4, 74.6 and 71.8, with a mean of 73.9.

Suggestion - why don't you do it? It's an excellent service to the local
amateur radio community, and you'll earn the appreciation of the local
ham community, and space enthusiasts.

Or get together with a bunch of space enthusiasts and hams and get
together the resources.

Saw a piece on the local TV news recently about "code grabbers" used by
thieves. They just park near your house and wait until you open the
door. The code grabber "grabs" the digital information and can then
open the door for them on the first try. Heck, you might be able to
approximate that with a small radio and tape recorder. (?)

They would make it foolproof if fools weren't so ingenious.

In Yosemite 146.52 is all there is. No 2m repeaters, FM, daytime AM,
TV, or cellular phones. Its a Caldera. There is a firespotter on
a mountain top on the 146.52 frequency. 2m HAM radio is best in Yosemite.

>I have assumed the company was formed by the guys
>who did the keyer...same location.

They were a bunch of college guys. Started a company
to make and sell the keyer. It wasn't a commercial
success, and they were left with a LOT of excess
parts and component inventory. Ron Stordahl K0UXQ, was
one of the principles. He kinda re-formed the company
to sell off the inventory, and in the process it
became successful. Ron is still the President of
DigiKey.

>Uh... no, read the article... he means phone tap. autopatch (where one
>can make phone calls from a HT) is something different..

No, he's correct. Phone taps are what the FBI, spies, and other
scum do, broadcasters do phone interfaces, or patches, and so do
hams. A phone patch is a *two* way interface with the phone network
while a tap is a one way eavesdropping technique. You're thinking of
autopatching, which is a semi-automatic variation of phone patching
used by repeater stations. Phone patches pre-date repeaters and HTs,
and have traditionally been manually controlled by the local operator.

Patching terminology came from the broadcasting world where phone
lines are traditionally terminated in patch fields through two wire
to four wire hybrids, and the operator could patch the line into the
console at need. Prior to the Carterphone decision, the telco had
to supply the hybrid. Now, of course, we can supply our own.

>have alot more trust and confidence in Wayne Green. Keep an open mind
>and you might just find, Wayne is right 99% of the time. .....What a
>long, strange trip it's been.....

I think Wayne's ramblings follow Sturgeon's Law, which says 90% of
everything is crap. Ah, but that 10% more than makes up for the rest.
Wayne at least isn't frightened of taking a stand that may go against
the prejudices of his advertisers and audience, unlike certain other
magazine publishers. You can say what you like about him, but he isn't
timid, stuffy, or boring. One reason he has been so successful is that
he has a keen knack for spotting a trend and getting out in front of
the pack so he's seen as leading the parade.

He was doing semi-automated digital message forwarding in the 40s.
He pushed FM repeaters before most hams knew anything about VHF.
He pioneered mountaintopping at microwave. And he's pushed ATV,
foxhunting, and other activities we take for granted today. He
has exemplified the ham spirit of playing with technology. While
no technical wizard himself, he's been quick to grab any promising
new technology and see where it leads. He brings a layman's enthusiasm
to what is often a stuffy field.

He even once attempted to put a human face on Dxing with his 73
International column, though that effort was doomed from the start.
And he was the first to put a paid lobbyist for amateur radio in
Washington, and has been ahead of the curve all along in regulatory
matters. Stands he took decades ago are coming to pass now, though
at the time most people thought he was nuts.

JH>Hello,

JH> A lot of my friends ask me why I do Ham Radio. I usually say that I
JH>learn electronics that way, by talking to other Hams who know how to fix
JH>all kinds of electronic equipment. It's really more than that. I had a
JH>lot of fun in High School back in the late 60's and yet I can't explain why
JH>it is fun It's a hobby within an education within a society. It's a
JH>bunch of people having fun till a big emergency happens. Then it's more
JH>than fun.
JH> What do you say when people ask you why?

JH>73

JH>John AB6KH :-)

the emergency aspect of amateur radio is the main reason i use when
explaining why i like the hobby. i tell people that i don't like
sitting around feeling helpless and useless when a major disaster
strikes. i tell them that it's the most useful method i can think of
that helps all the local organizations on a whole keep their act
together and keep moving during an emergency. that usually satisifies
them.

ZCZC AE23
QST de W1AW
DX Bulletin 47 ARLD047
From ARRL Headquarters
Newington CT September 8, 1995
To all radio amateurs

SB DX ARL ARLD047
ARLD047 DX news

This week's bulletin was made possible with information provided by
Tedd, KB8NW, The OPDX Bulletin, Randy, K0EU, the Yankee Clipper
Contest Club PacketCluster network and the Contest Corral column
from the pages of QST magazine. Thanks to all.

MONACO, 3A. Luciano, I1YRL, will be back in 3A land sometime in
September. There were no specific dates mentioned. He is usually
active as 3A/I1YRL and can be found on all bands and modes.

REUNION ISLAND, FR. Didier, F5PXQ, will be active as FR/F5PXQ from
October 18 to 25 and November 15 to 31. His operations will be on
20 through 10 meters including the WARC bands. In between these
operations, he will be active from Mauritius, signing 3B8/F5PXQ,
from October 26 to 30.

RODRIGUES ISLANDS, 3B9. 3B9FR has been showing up quite regularly
on 30 meters. Look for him around 10103 kHz at 0301z or between
1130 and 1230z.

JUAN FERNANDEZ, CE0 Update. Randy, K0EU, reports that equipment
plans, frequencies, and QSL route have been finalized for the
September 1995 Juan Fernandez DXpedition. K0EU, K4UEE, and K0IYF
will operate using the call sign CE0Z for one week of operation
starting September 13 and ending September 20. Emphasis will be
placed on low bands, WARC bands, RTTY and satellite.

CROZET, FT5. From December of this year until February 1997, Jean
Jacques, F5SZK, and Samuel, F5IJT, will be active as FT5WF and FT5WG
from Crozet.

DJIBOUTI, J2. Patrick, F5SFD, will start his activity in September as J28PP for the next two years. He will be active on SSB and CW. QSL via F5PWH.

BENIN, TY. A group of three Norwegian hams will go on a DXpedition to Benin from September 16 to 26. The operators, who are members of LA DX Group, are Bjorn, LA9IY, Roger, LA4GHA and Johnny, LA5IIA. They expect to use the call sign TY8G. Operations will be on all bands and modes, but with concentration on CW, low bands and the WARC bands.

ST. KITTS, V4. Joe, VE3BW, states he will be active in the CQWW SSB Contest. Listen for V47BW.

Subject: FM Voice use below 29.5mhz
Date: 9 Sep 1995 04:18:05 GMT
Message-ID: <42r4ht$ntc@ixnews6.ix.netcom.com>
I need a little help getting something straightened out in regards to the use
of FM
voice on freqs below 29.5mhz. I seem to recall a question on my Advanced
written
that asked why FM voice was not used below 29.5mhz, and also recall that the
correct answer had something to do with excessive bandwith. I have read, and
reread part 97 and can not find nothing that limits the use of FM Voice below
29.5
mhz.. Is this something that falls under the "Good Amateur practice" clause,
or is
it something that is covered by a section of part 97 that I have either
misread, or
do not understand..

Thanks
Don

Maybe someone has already thought of this, if so please let me
know. If not, are any of the owners of 41R, 51R, etc
(Machines with the windows programable memories) interested in
sharing the data files for your local area. If you were going
to a particular area you could pull up that file and download
it to your HT. Is there a web page with these files on it?
Email me if you are interested. I would even be willing to
add the page off of my Web server. You can respond to this
address or knunn@redstone.army.mil

Formulating a computer-virus control strategy would be easy
if all we had to deal with was computer hardware and software.
However, computer-virus control is really a people issue.
Regardless of how much money you spend on anti-virus
products, your virus protection will only be as good as your
last backup.

Regards.

Digital pagers should be OK except as noted below. However, voice pagers that
transmit a spoken message would clearly violate the rules concerning re
transmitting amateur communications on other services.

In article <mmusick-0509951013020001@198.102.74.50>,
mmusick@talx.com (Mike Musick) wrote:

As a minimum they need to include the following (preferably all on the
SAME side of the card): your call, his call, date/time(in UTC)/mode/band
for the QSO, a signal report, and an indication that it was a 2-way
contact. Other information which is nice to include but not essential
would be your address, county, grid sqare etc. The minimum information is
what most of the 3rd party award programs require in order for a card to
be acceptable. Hope this helps. 73 - Alan NS0B

121.5 is well monitored all over the U.S. for supporting aviation
distress calls as well as ELTs. The frequency is in the aviation service
but is designated as an international distress frequency for maritime use
as well. It's use on land for distress purposes would be considered
legitimate.

The problem with how flight service and air traffic control monitor the
frequency is that they might not be able to hear a call for a low power
radio in, just as an example, a remote canyon. It should also be noted
that aviation ground facilities and airplanes are looking for AM signals.

While there is no requirement that general aviation aircraft guard the
channel, many pilots do. I monitor 121.5 on long, cross country trips
for a couple of reasons: I don't like to listen to a lot of radio
chatter while enroute, when I don't have to, and 121.5 is usually quiet.
I don't have to figure out and dial something in if I need help. And I
might hear something while at altitude that ground stations might not.

If you want to locate yourself more precisely, I recommend a 7 1/2
minute quadrangle map over the 7 degree map mentioned. I'm not familiar
with that scale.

A little clarification might be in order. USGS topographic sheets
like the one mentioned above have several different reference grid systems
employed on each map. The most obvious "grid" lines on most maps (where
townships and range surveys have been done) are section lines that are one
mile on a side and have nothing to do with lat./long. Each corner of a
topo sheet will be identified with the precise lat/long for that corner.
Small tick marks (~1/8" long) mark 2 1/2 minute interval along the side of
the map. There will be two of these between the corners making a total of
7 1/2 minutes on each side of the map. You must interpolate for locations
that do not fall along the ticks.

There is a difference between taking credit for those things, and actually doing them. He didn't really spend that much time at any of those hobbies. He did allow others to publish their ideas. He is kind of wishy-washy on the facts, but basically he did participate in noted events, but was unable to become a regular of any of them. He probably spent 2 hours puting up his NYC link on VHF he always talks about, but then 45 years bragging about it. I just hate to think how many people he got to write about their projects, who he never paid. If I was going to write for 73, I'd demand that their offer be a post dated check, or a timed deposit in any bank except one in MA or VT. Otherwise I fear you will be only donating a gift.

****

RON GOLDSTEIN
K A 2 I I A
15 KENNETH DRIVE
PUTNAM VALLEY, NEW YORK 10579
914-526-3221

AMERICAN RADIO RELAY LEAGUE
225 MAIN STREET
NEWINGTON, CONNECTICUT 06111

Gentlemen:

I am enclosing a copy of the first document of its' kind in the history of the town in which I live. It is a building permit for an Amateur Radio antenna. The town that I live in is Putnam Valley, in Putnam County, New York, just west of Danbury, Connecticut. I have lived here for 18 years, and have been a licensed amateur for 15 of those years.

I have wanted to erect some kind of tower for all of those 15 years, but could not because of zoning regulations and a stubborn member of the zoning board of appeals--who, I am ashamed to say, is also a fellow Ham Radio Operator. His call is WB2VBO--His name is Herb Levinson. One night about 13 years ago, at a local ham radio club meeting, I approached him, and asked him how do I apply for a variance to erect a tower. His answer was, "Don't even apply, I'll vote it down". Luckily, he is no longer on the board.

Because of that, I struggled for the past 13 years, getting pounded in pile-ups, and NOT being able to work most of the rare DX on the bands. However I managed to get my WAS, and DXCC with 131 countries currently confirmed.

Getting back to our tower victory---About 2 years ago, there was talk in town about rewriting the Master Zoning Plan. There are over 30 licensed hams in town, but only about 10 of us are active. We attended many zoning board meetings, and spoke our minds, explaining that local towns are NOT allowed to regulate Amateur Radio Antennas, and supplying them with sample zoning plans from towns that allow antennas to be erected. We also explained that only the FCC is

allowed to regulate us, our stations, and our antennas. We also explained that ONLY the FCC is allowed to regulate RFI.

We asked our Hudson Division director and vice-director for help with this. I personally called the vice-director at least 5 times, but we never received a return phone call from either one of them--A BIG DISAPPOINTMENT.

Even though they refused to help us, we kept on plugging, and at one of the final discussion meetings, I stood up and asked the board their views on Amateur Radio Antennas. To my surprise, the acting head of the board stood up and said that he had an aunt and uncle that were hams, and he thought that they supplied a very valuable service to their community, and he said that he saw NO REASON to deny us the ability to erect our antennas. The other 3 board members surprisingly agreed with him.

Since then, the new zoning regulations were published, and Amateur Radio antennas are now allowed with a maximum height of 100 feet--more than enough for my needs and any other ham in town. Actually, somewhere in the new zoning book it also says that Amateur Radio antennas WILL NOT be regulated by the town, but MUST conform to all applicable FCC regulations--which actually allows us 200 feet !!!

Well, that's the story here in Putnam Valley. I just wanted to let you know what perserverence and acting like a gentleman can do, even WITHOUT the help of our Hudson Division directors.

Yours truly,

Ron Goldstein.....KA2IIA

Tone Deaf? I learned code punching it out on a bicycle horn. Remember those things - they squawk like a parrot. Not a nice "DC tone." Lots of folks rely on the computer programs and audio tapes to learn. What worked for me was punching it out on a code oscillator and listening to it. Helps develop a good "fist", too. Might try that. Then when you get the characters down, then move on to the computer programs and tapes.

Good luck

>legitimate.

I carry a CB with me when I'm in the Virginia mountains, but I'm planning to spend some time in remote areas of Nevada and other western states this fall, so I've been looking for an alternative.

Can a civilian buy a transceiver that operates at 121.5 MHz, perhaps a single frequency emergency radio? I got a safety brief from an Army helo pilot recently in which he showed us his little emergency radio. I'm guessing this may have been a single channel transceiver plus a beacon. Where, how, and at what cost can a civilian version be purchased?

My other plan was to buy a 5W+ 2-meter handheld and an amateur license. I just picked up a repeater directory and notice that repeaters are somewhat sparse in Nevada except around Reno or Las Vegas. I'm not confident this would be a good choice since I'm interested in having a radio only for an emergency, and the more remote you get, the less usable they seem to be.

Getting something that talks to the sky would seem to be a better choice. Aren't there some orbiting amateur satellites that pass over everywhere a couple of times a day? Would they be usable to a guy with a 2-meter handheld if he knew their schedule?

I am looking to make a contact on the HF phone bands with any hams in Novato, California. I live in Hillsborough County, New Hampshire.

I was recently back in Novato on Labor Day weekend and spotted a few beams and G5RV's in people's yards. Too shy to go knock on the door, I thought I'd try this forum instead. I lived in Novato and went to 1st grade there and would be very happy to have a QSO with one of the fine residents of that wonderful city in Marin County.

If you are interested or know of someone who is, please send me e-mail at KINGBP@KA1FQT.MV.COM. I'll be travelling alot this fall but will check in on the mail once or twice a week, mostly weekends.

Thanks and 73's

Bryan - KA1FQT

I find it disturbing that i have not heard any "offical" stand on this on-going "drop-the-code-on -hf"
arguement. Are they collecting data, like how many or what % of the ham population is for it or against it?
Is that what they will base their stand on?
I think that they are looking at what is best "financally " for the ARRL.
I have seen articale by staff writers at H.Q. , but never by the board-of-directors itself. Why?or Why not?
Like all politicans they are more-than-likely looking how best a postion serves them, not the people.
I personally, don't trust them. They claim, and are looked at by the FCC as ham radios only offical
representive, but they were not elected(eg. HQ board), they only have 10% of all hams as QST subscribers.
Are they truely representing us? Or are watching out for only their own pocket book?
Just a few thoughts, and questions de Matt/KK5DR

Yes, and no.

Remember when poly paks first started selling mosfets?

They got their names from the "packs" that they sold in polyethelene bags. They paid for the privilege of sweeping the floors at electronic parts manufacturing firms, took the floor sweepings and bagged them.

When mosfets first came out, they went into the poly bags as everything else had. Early mosfets were more static damage prone than these days and the static electricity generated by dumping them out of the poly bag pretty much did 'em in as I recall...

That's Oklahoma...

The biggest problem in the Oklahoma bombing, was the first people to set up comms had more energy than knowledge. After a day they were finally pushed aside and told to go home. I understand a strong personality with leadership skills was void during the first day.

But also here in Oklahoma, the Hams were relegated to serving food at little rescue stations. Most comms were "We need more coffee at station 4," or "More sandwiches, etc." It took a week for FEMA to get its communications gear to the site. At that point, they used a satellite dish (on a truck) to bypass the local phone system. All Disaster Preparedness drills were planned by the city to include cellular phone. Guess what, a cell node can't handle 100's of Gomers running around with radio phones!

I think the usefulness of amateur radio at the blast site was insignificant. There was no way to solve the cities communications problem, which was the need for phones. If Hams had a DP plan that included multiplexing 100 phones out of the Disaster site, they would have had value. As it was, they were told to stay out of the way and get coffeee.

> on-going "drop-the-code-on -hf" argument. Are they collecting data, like
> how many or what % of the ham population is for it or against it?

It's a silly argument. It's a non-issue. HF has no need for no-code, as the population using it is quite satisfied with the status-quo. Who really cares; is the big question. Is there something broken that no-code will fix? No, there is 1000's of people willing to take a code test and not whine. I say again, it is a non-problem.

ARRL doesn't make official comments. They make official legal statements. Everything they produce is based on enhancing their political position with Congress. They are a PAC. To participate in idle chit-chat with wanna-be's is at most counter-productive. Put a Bill before Congress, or Petition the FCC, and you "may" get a response from the ARRL. If they feel like it.

The ARRL is like any organization with more than 1 Vice-President: It has very low acceleration, and very high drag. They are effective when they get up to speed, but piss you off while they are in motion. It's not the organization that sucks, it's the 10 people at the top. They really suck. But you and thousands of others cannot remove them. They are lifers, because of the election rules.

> because of its potential for abuse).

"DTMF suppression" most commonly applies to the retransmitted repeater audio and NOT to that audio which goes to the phone line. How else can your DTMF tones be read by the telephone company's switching system so that your number is "dialed?" There might be controllers out there suppress DTMF tones after the call is completed, but I have neither used 'em or heard of 'em.

The suppression of the retransmitted DTMF tones serves as security for the control operator and for autopatch users who do not wish to have those monitoring with decoders know the codes and numbers sent. The disable feature permits these codes to be retransmitted where the control operator permits group calling and DTMF squelch use.

> Where, how, and at what cost can a civilian version be purchased?

There are single-frequency rescue beacons. Marine supply stores sell them for boating use, and they are called EPIRBs. The drawback to this, of course, is that you can't communicate the exact nature of the emergency, how many people it involves, etc.

> My other plan was to buy a 5W+ 2-meter handheld and an amateur license.

This sentence is ambiguous, so I'll point out that you don't "buy" an amateur radio license. You have to take a test, then the team that administered the test sends the forms to the FCC and they ship your license to you in the mail. The process has been sped up considerably, so the FCC turnaround time is down to a couple of weeks, but you will probably need to take some time to study for the test. Contact a local ham club for more information.

From a good height, you can hit a repeater 50-60 miles away with no problem.

> Getting something that talks to the sky would seem to be a better choice.
> Aren't there some orbiting amateur satellites that pass over everywhere a
> couple of times a day? Would they be usable to a guy with a 2-meter handheld
> if he knew their schedule?

Probably not so useful. Most of the satellites have uplink and downlink frequencies in different bands (10 meters and 2 meters, for example), and use SSB or Morse code rather than FM (which is what 2 meter handhelds use). There are satellites you can listen to on a 2 meter HT, but transmitting to them generally requires directional antennas.

In my experience, a 2 meter rig is fine for contacting someone from the backcountry - but my experience is limited to the densely-populated East. In the West, even though there are fewer repeaters, they tend to be located on VERY high mountain tops, so their range is usually greater. Someone in your local ham club has probably been out there, and will be able to offer better advice. In addition, there is an informal protocol followed by many hams in the backcountry of listening to 146.520 MHz at the top of every hour for five minutes. As this becomes more widespread, repeater coverage becomes less of an issue. Finally, while ham radio isn't 100% guaranteed communication, it is, in my experience, more versatile than cellular phones (at the risk of starting a hackneyed thread again).

SB DX @ ALLBBS $OPDX.221
Ohio/Penn DX Bulletin No. 221

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 221
BID: $OPDX.221
September 11, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K3ZO, WD4KXB, K6URI, KD7E, W9SZ, WB9YXY, 5R8DS, DF4RD, DL9GOA & DX News Letter, F5NZO, G4BUE & DX News Sheets, PB0ALB, VE1BVD, VE6SRC and Alberta Amateur Radio News for the following DX information.

3V, TUNISIA. Denis, WD4KXB, received the following FAX from Hrane, YT1AD, and was asked to distribute the following information: Hrane will be operating during the 1995 CQWW DX contests both phone and CW signing 3V5A. He has supplied a copy of his license which was attached to the fax. He is also requesting assistance since he will be leaving the equipment with the Tunisian radio club 3V8BB. He is looking for both financial help and equipment - i.e. a TS-850S, Mosley PRO96, T2X rotor, and 1KW HF amplifier, or similar equipment. His addresses and phone numbers are: Milosevic Hrane, YT1AD 36206 Vitanovac, Yugoslavia - FAX 381 11 139 852 or Milosevic Hrane Z31AD Bul. Asnom 16/4-17, 91000 Skopje, Macedonia - FAX 389 91 110 166 - Voice - 389 91 419 135

3W, VIETNAM. The Tokyo PacketCluster reports that a new station 3W6GM has appeared on the bands. There are not many details about this station other than it was heard on 14295 kHz around 1420z and 1619z. QSL via DF5GF.

5W, WESTERN SAMOA. Martin, G6DPU, and Julie, G7UMM, have moved to Apia where they will be active for 18 months as 5W1MH and 5W1NJS on all bands. QSL direct to c/o Meredith & Associates, PO Box 1084, Apia, Western Samoa.

9M8, EAST MALAYSIA (1996 DXPEDITION). Peter, PB0ALB, reports that he will be traveling to Sarawak East Malaysia every year to visit his family's relatives (in-law). His next trip and activity will be February 20th to April 2, 1996. All equipment is already on location. He will be operating from a location which is 7 miles south of Serain City. He plans to be active in the following contests: ARRL DX SSB and CQ WPX SSB (March 96). Peter will be using the following equipment (but plans to improve on

hissetup): Yeasu FT-7B 40 Watts, FD4 for 80 and 40 meters and for 20/15/10 meters a 2 element tri-band Yagi. He is interested in looking for used HAM gear. QSL via PB0ALB (only 1995 Callbook).

A4, OMAN. A45ZZ has been active daily on 1833 kHz between 0100 and 0145z. Most of the QSNs on the Ohio/Penn Network show A45ZZ was working Europe.

CFB CALGARY SPECIAL EVENT. Canadian Forces Base Calgary will be holding Armed Forces Day on Saturday, September 17th. A special event station will be on the air during this display of military equipment to the general public. The station will be located at Hanger 1 Currie Barracks, the call sign will be CF6AFD, and will be operating from 1600z until 2359z. Frequencies will be 7240, 14135, 14275, 21250 +/- QRM and 3.850 on request for those without the higher band privileges.

CY0, SABLE ISLAND (Rumor?). A group of 4 DXpeditioners including VE1CBK is headed for Sable Island CY0 between September 30th and October 10th. It is expected to be an all-band operation. QSL route TBA.

FT5X, KERGUELEN ISLAND. Jean Jacques, FB1LYF (ex-J28CW and TA/FB1LYF), will be active as FT5XL from AF-048 for one year beginning November. His activity will be on all bands, CW, SSB and especially on RTTY. There will also be activity on RS-12. QSL to his manager F5NZO, Didier Bruriaud, Le bourg, F-71140 Vitry sur Loire, France.

JY, JORDAN. Bob, WB9YXY, has announced that he will be active from here as JY8XY for 2 1/2 weeks beginning October 3rd. Operations will be on CW/SSB, on 160-10 meters (excluding the WARC bands). The station he will be using consists of a TS-830, Clipperton Amp and a TH-6 at 60 ft. Upon his arrival, he will install wires for the lower bands and will be active on CW as much as possible on the lower bands. Bob states this will be a pleasure trip to visit friends in Amman, but side trips to a couple of neighboring countries may be possible (if permission is granted and guest operations from those countries will take place as well). Being a contest style operator, Bob requests that you use FULL CALLSIGNS in the pileup. QSL via home call or via the bureau.

M, UNITED KINGDOM. The DXNS reports that M1OOG will be active until September 21st on CW/SSB celebrating 100 years of radio and honouring Marconi. This is only the second time the M prefix has been used in the UK, the first in 1991 with M0RSE. QSL via RSGB bureau.

NEW QSL ROUTE FOR 5R8DS AND 5R8DY (UPDATE). Ben, 5R8DS, has officially announced that the new QSL route for 5R8DS and 5R8DY is via PA3BXC (his home call): Ben and Marian Witvliet, Sleedoorn 65, Emmen - 7822an, The Netherlands. All QSLs will be answered (if direct with a SASE or via bureau). This as the final solution to the lack of a QSL-bureau on Madagascar. Ben also mentions that Marian, 5R8DY, has returned to Holland with the children because of sharply declining security. 5R8DS will terminate the Radio Netherlands contract on Madagascar in favor of his family, ending the 5R8DS activity on November 1, 1995. The callsign will be maintained so that Ben can return some day for an expedition to

complete his 5BDXCC (lacking only a handful on 80 and 10 meters). Ben continues to be active on CW or SSB (on 5 bands).

PJ7 OPERATION CANCELLED. Tom, K6URI, states his PJ7/K6URI operation scheduled for September 9-23rd has been wiped out due to Hurricane Luis (not much left of the resort he was going to). He has rescheduled vacation for Margarita Islands (IOTA SA-012) off coast of Venezuela, October 7-21st, and will try to get license to operate.

SU, EGYPT. Individuals have been receiving QSLs from Mohamed, SU2MT, with notes stating he will be active on the low bands this fall. Also, he will be looking for skeds for 160 meters. More details are to follow later.

VA1S (SPECIAL EVENT STATION). Alan, VE1AL, reports members of the Marconi Amateur Wireless Society will operate VA1S from December 1-31st, to mark the 93rd anniversary of Marconi's successful transmissions from Canada to England. This is the 5th consecutive year for the VA1S operation. Activity will be on CW/SSB and on all bands from 160-10 meters, depending on conditions. This year's VA1S QSL card and certificate will honor 100 years of radio. QSL via VE1AL with appropriate return postage, or via the bureau. Certificates for making contact with VA1S in 1995 are available via VE1AL. Please provide QSO information when requesting a certificate. The cost of the certificate is US $5.00 (or 10 IRCs) for postage and handling. Certificates will be issued at no charge to any station making contact with VA1S on 5 different bands during 1995. Any station wishing the free award must make a request for it and provide log details. A different QSL card and certificate have been issued each year since 1990.

VK9X, CHRISTMAS ISLAND. Mine, JA2NQG, will become active on 160 meters from here this week. He will stay there from September 14-17th.

VP8, FALKLAND ISLANDS. Mark, VP8CSA, is active and will continue to be active at least for the next five months. His operations seems to be mostly on 80-20 meters. Check 20 meters (around 14195) between 2230 and 0030z. Check 40 meters (7168) around 0300-0330z. Check 80 meters (3795) around 0400z. QSL via DL1SDN.

WRONG QSL MANAGER ALERT! Bob, NR8U, the "O" letter manager for the 8th Area DX QSL Bureau, reports that Howard, WB8OBW, has been listed recently somewhere as the QSL Manager for VP2MFM, which is incorrect. The correct route is via WD4KXB. However, Howard did operate as VP2MFM in 1979 and again in 1981, but was his own manager. Lately, Howard has been receiving a bunch of cards for VP2MFM, which he has to forward to WD4KXB.

ZONE 26 ACTIVITY. Fred, K3ZO, reports that there will be activity out out of Thailand in the CQWW Contest and also reports the following: The old HS0AC was kicked out of its quarters in the Bangkok Science Museum. However, the old HS0A at the Asian Institute of Technology has been refurbished and the HS0AC license has been transferred there. This year, the HS0AC station will use the special call HS50A in the CQWW in order to

mark the 50th year that King Bhumiphol (HS1A) has been on the throne.
A few of the HS contesters will journey out to the countryside to put
HS7AS on the air for the CQWW. They say receiving conditions are much
quieter out there.

Excerpts and distribution of The OPDX Bulletin are granted as long as
KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS
online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with
the Sysop or send InterNet Mail to one of the three following addresses:
kb8nw@barf80.nshore.org / aq474@cleveland.freenet.edu / DFJH48A@prodigy.com
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which
shares the same phone line as BARF-80 BBS using a data/fax/phone switch.
To access: 1) Dial Number. 2) Wait for first ring (the second ring should
be a false ring from the fax/data switch box) and then dial four quick
ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every
second will not have to do this step.) 3) The phone will pick up and
after the "BEEP" leave your voice message or FAX.

See QST, February 1994, p.99: A Wilderness VHF Protocol.

This protocol suggests monitoring 146.52 simplex for five minutes at
the top of the hour at 0700 LT, 1000, 1300, 1600, and 1900. (7 a.m.
through 7 p.m. every third hour). Everybody liked the idea. If I
lived in a repeater-sparse area (I don't) I would monitor too!

misc:29162

JUST A HAM RADIO TERMINOLOGY CLARIFICATION: TELEPHONE INTERFACES TO
RIGS HAVE HISTORICALLY ALWAYS BEEN CALLED A "PHONE PATCH", NOT A "PHONE TAP".

"TAPPING" OF TELEPHONES HAS OFTEN BEEN DONE WITH A LINEMAN'S HANDSET,
CALLED A "BUTT-IN", WHICH CLIPS DIRECTLY ONTO THE LINE PAIR.

A TELEPHONE INTERFACE OR "PHONE PATCH" FOR A HAM RIG IS BEST DONE WITH A
TRANSFORMER -BASED HYBRID, WHICH IS EASILY HOMEBREWED. DESIGNS FOR THESE HAVE
BEEN AROUND SINCE THE 50'S IN NUMEROUS HAM RADIO ARTICLES, INCLUDING QST.

I don't think it was a settlement, more like World War III, but it was in
Virginia's name when they fell out. He fought for it, and then after
McGraw-Hill bought bought Byte he fought against it with Kilobyte, later
Kilobaud.

Yes, but they do go back to wire telegraph days before radio. And meanings
have changed a bit over the years, or with different telegraph companies.
For instance 73 is today "best regards"; but in some old telegraph books
I have seen it rendered "please accept our sincere compliments".

He's also been in the audio biz. I remember reading an advertising
brochure for the Karlson loudspeaker enclosure back in the 1950s that
was written by Wayne. And seems like he has an audio magazine or two
under his wing now.

Jeff said:

Hi Alan. I beleive I can. Here is 97.113(a). The date on this is
December 20, 1994. You may have an older one.

Mike Said:

Hi, Alan -

I think Jeff captured it, and it's the same as the version I have
which is
dated 7/1/95.

Quite a bit of the wording in the 97.113 you quoted is foreign to me.
Out
of curiosity, where did the version you have come from? It's bad
enough
that we tend to play amateur lawyers interpreting the gray areas, but
I'd
be more than a little alarmed if there were two current but
conflicting
authorities on the statute! Wowee!

I say:

I copied the text via cut and paste from the U.S. House of
Representatives Internet Law Library Code of Federal Regulations at
http://www.pls.com:8001/his/cfr.html. Since it is maintained by House
Infromation Systems, I have to assume that it is the current language.
If it isn't, I'll have to send a complaint to Comments@hr.house.gov.

73,
Alan Cook, N7CEU

Uh... no, read the article... he means phone tap. autopatch (where one
can make phone calls from a HT) is something different..

I thought that there was a way to originate traffic on packet to a
non-ham using either zip code data or phone area code and prefix
data to allow auto forwarding by the packet network. I can't
remember what the format was though. Appreciate a direct reply
to dmisner@aloha.com. For example: Is there a format such as
96789@hi.usa.oc that will route automatically or the equivalent
for phone data 808623@hi.usa.oc Thanks for your reply.

It's really quite simple. "On the net, it's always September."

send mail to info@arrl.org and in the body of the message include
send part97.txt

You will receive about 5 bits of mail that are the entire part 97.
And it's the newest latest greatest one. Including the 219 stuff.

It's better than that. The new(er) Genie openers have a (at least) 12 bit
system. Thats 4096 combinations on the frequency they operate on. So I
'spose if you didn't mind attracting too much attention to yourself by
sitting across the street for a few hours (days) and wanted to reprogram
a door opener, you'd finally get it right.

Silly you, indeed. I don't really care what the content of
any message is; the bottom line is that posting private e-mail,
something you seem to have taken to lately, is extremely poor
Usenet behavior. Your goal is to inflame, stir up trouble,
not to defend minorities.

Subject: Re: fool

As for your pal from Israel, well of COURSE he wouldn't have liked what I
said!! Too many Jewish people live exclusively in the past and will NEVER
let go of it, continue to beat to death what happened during WWII, and are
so blind they can't see how THEY behave now. The behavior in Isreal is
disgusting in its own right.

And now my comment (Burt-K1OIK):

Most readers will not "get it", but evil triumphs when good people look
the other way. Are hams like Mark Fuhrman? No but they will look the
other way.

No ham defends anything especially minorities buty I try.
I wonder what black hams would say how they are treated?

Hams do not hate, the just let the shit happen.

You know, there was a time when I viewed Wayne Green as an
oddball......but even when I didn't agree with him, I enjoyed reading
his rantings and ravings. Now I have actually discovered that I really
agree with Wayne most of the time. Even though I am an ARRL member, I
have alot more trust and confidence in Wayne Green. Keep an open mind
and you might just find, Wayne is right 99% of the time. .....What a

long, strange trip it's been.....

Surprisingly when I went looking for part 97, I started with the FCC.
They "don't keep it online". I sent mail to the fcc and asked where to
find it. They suggested the house web page. Ahyuup. That's the OLD version.
The best way to find out if it is indeed the new one is if it contains
the modifications to 97.203(g) (I think) concerning operation on the 219-
220 MHz band. If it isn't in the copy you have, it isn't the current one.

I have been wondering the exact same thing. I use digi-key often
and have an account with them. I keep meaning to ask. I had an
original digi-key keyer. It used RTL logic.

I saw this Subject Heading "H-P knob" and it reminded me of
a funny incident a couple of years ago...

The salesman from HP was demonstrating the latest test equipment.
He kept mentioning an "Are Pee Gee" and we didn't understand
what the hell he was talking about. I interrupted and asked
him, "What is an 'Are Pee Gee'?" His chest swelled with pride
as he answered, "The RPG is the Rotary Pulse Generator". He then
pointed to one particularly large knob. I said, "Oh....we call
them 'Kay Enn Ohh Bees'".

-Jeffy
VE1BLL

PS: In case you don't get it... 'Kay Enn Ohh Bee' = K N O B.

Any specific info. you need? I have one on right now - surfing the net & talking on HF at the same time. I like it - talks & listens well & it's comfortable. If you get one, ask for the adapter to fit it to your radio (KW, Yaseu, Icom). I believe one is included in the price - if you switch radio brand you can buy the adapter separate. It doesn't come with a PTT switch inline, but there's a jack on the radio adapter to plug in a foot switch, or a hand switch. You can get a foot switch cheaper at Radio Shack - I spliced in a longer cord to get it to my computer table. Also rigged up a hand switch that I can plug in instead of the foot switch. Anything else you need to know? Terry KD4GBO

Thomas.Randall@bbs.mhv.net (Thomas Randall) sed:

:> I imagine the folks in Oaklahoma and the hurricane prone states would
:>disagree with that statement. Care to explain WHY ham radio is a disaster
:>during disasters?

You took the words right from my keyboard Tom. I got my license whilst stationed (1981-1985) in Biloxi, Mississippi in 1981. Went through a few tropical storms and a couple of hurricanes and a whole lot of severe weather watches and warnings.

Most areas that have active ARES members are prepared, through practice, for most disasters. I have personally seen and been involved with the action... such as the flooding of Slidell, Louisiana in April of 1983. It was the first time in my life I had ever seen two story houses under water when the Pearl River overflowed its banks. Working side-by-side with St. Taminy parish officials we had an impressive operation going on...very organized.

I was even impressed by the CB'ers running the REACT station located adjacent to the amateur NCS. Of course they (the CB'ers) were having to put up with intentional interference but they were getting things done. In real disasters communities have a tendancy to come together for the better of all. Yeah, there were the jerks. They may have gotten noticed but they were very few.

SKYWARN was pretty active back then. I haven't been on the Gulf Coast for almost a decade so don't know what is happening there now but we were always attending training and activating for tornado watches and warnings. Hey, we even activated when SKYLAB came back to earth...remember that? I bet the Aussies sure do.

I'll never forget Hurricane Elena. She hit just as my family and I were to depart the Gulf Coast. Kept us there an extra week or so...We ended up under martial law and I couldn't raise a ham on any VHF freq (to save my life) for a couple of days. I was getting information out via HF though for friends and neighbors. I still have the nice certificate [with a photo of the hurricane taken from the Shuttle] I received from the American Red Cross for helping to set up and maintain communications between the Pascagoula, Mississippi and Mobile, Alabama Red Cross facilities during the last couple of days before I moved up to New Hampshire.

I could go on and on with my experiences in other parts of the country...like in New Mexico where our ARES team was an integral part of the New Mexico State Search and Rescue Plan and we were activated on many occasions to find lost hunters, downed aircraft, etc.

Burt: You need to qualify many of your statements regarding any judgement of the quality of amateur radio emergency operations. You know not of what you

speak in that regard. I do enjoy reading your posts. Very entertaining to say the least...but not all completely true.

Regards for now...

For sale posts belong in rec.radio.swap only. That is the charter of
the newsgroup. Buying, selling, and trading posts do NOT belong in any
other newsgroup in the rec.radio.amateur hierarchy.

This is all explained very nicely in the "Guide to the Personal Radio
Newsgroups," that Jay Maynard posts on the 15th of every month. One
begins to think maybe it should be posted daily. 8^{)

I don't mean to get on anyone, but I know that some of these WWW servers
that SAY they are updated everyday - are in fact, NOT updated everyday.

My friend took the tech test last Saturday (the 2nd) and the fcc issued
her a callsign the next Thursday (the 7th) - is that a fcc record?
Remember there was a Labor day that fell on a Monday in between there.

If you want the most up to date info on your callsign, check out

ftp://fcc.gov/pub/XFS_AlphaTest/amateur

it's an ftp site where the fcc puts all of it's daily activity in files
like mon.zip (for monday). AFter the week has ended, I am assuming it
goes into the appl.zip file, which is currently at 30megs.

As far as the QRZ being updated everyday - my parents calls aren't even on
there, and it's been a long time since they got their licenses in the
mail, at least in terms of daily updates.

Hope this helps those who are waiting for their calls

>used 'em or heard of 'em.

The popular ACC RC-850 controllers suppress the tones. It interprets strings of DTMF-generated characters and then the RC-850 dials the phone. While talking on the phone, the RC-850 continues to accept DTMF and intercepts the tones, interpreting them as commands and taking whatever actions. However, if you preceed the DTMF with (in the case of the two repeaters that I used in this fasion) a '#', anything following was passed through the repeater. This enabled you to dial a pager or even page someone else on the repeater who had a DTMF decoder 'listening.'

4527. radio control software

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-11 00:00:00 UTC
From: steve.hajducek@bytewise.org
Message-ID: <127.8775.20@bytewise.org>
Source record: 238693

Subject: CAT Control Center (CATCC) Press Release.
Date : 1995 - Mon. Sept. 11 10:25 Local/ Mon. Sept. 11 13:25 Zulu
From : Steve Hajducek, N2CKH

The Shareware/Trial version of CATCC, CATCCjr, is about to make its debut. On September 28, 1995 CATCCjr will be placed on the ByteWise BBS for downloading as CATCCjr1.ZIP through CATCCjr4.ZIP respectfully. It will also be uploaded to the ARRL BBS and other popular Amateur Radio BBS systems and FTP sites. After the files have successfully been transfered to all sites, a message listing all sites will be sent via e-mail.

The CATCCjr version is basically a stripped down beta version of the full commercial version. It is being made available to allow potential users of CATCC a method to sample some of the latest features and comment on the software prior to purchase.

CATCCjr is NOT a supported product, it is not a complete product, it is only a trial version. However, should it meet the users needs, it can be used forever without any registration. However, CATCCjr will remain the copyrighted property of N2CKH.

```
=====================================================================
| |
| Pricing for CATCC has been set at $49.95 U.S. (plus $10 U.S. |
| for the bound user's manual) plus 6% N.J. state sales tax (and |
| $7 U.S. shipping and handling within the U.S. and $15 all other |
| locations). All shipping within the U.S. will be by U.S. Priority |
| Mail. A tenative shipping date has been set for the first week of |
| November, 1995. Orders will be shipped in the order received, |
| payment in U.S. funds by U.S. bank check or U.S. Post Office |
| money orders. Cash will be accepted, however, cash orders are NOT |
| recommended, especially from overseas. |
| |
=====================================================================
```

CATCC is the application Amateur Radio has been waiting for. It provides FULL control as provided by the equipment manufacturer of your C.A.T. radio via the computer. With a headset/boom microphone and foot switch an operator can literally keep their hands on the keyboard/pointing device and work'em/log'em faster than ever. With the DX-Graph(tm), DX-Filters(tm), Band-Watch(tm), Accu-Rotor(tm), AutoMode(tm), AutoGrab(tm), DX-Calendar and DX-Sleuth(tm) your always on top of the action and you'll have the latest in logging, analysis and reporting.

MS-Windows based, written in Visual Basic, C and Visual dbase, the CAT Control Center is fully event driven. It supports eight serial ports for HF and VHF rigs, Packet TNC (DX-Cluster monitoring), 2nd TNC for RTTY, Pactor etc., MM-3 electronic keyer, Rotor control and other peripherals. Also supported are parallel printer ports (3) for voice keyers, antenna switch boxes and others.

Basic operation of CATCC/CATCCjr involves an H.F. C.A.T. transceiver and VHF Packet TNC monitor DX spots. As spots are recieved, they are displayed and made available for selection by the user. Audible spot announcements and various DX-Alerting sound effects are available, when the user via pointing device or keyboard selects a spot, the C.A.T. transceiver is place on the spots frequency (and optionally mode), the spots call is placed in the log window and depending on mode and option selected a 59 or 599 is placed in RST s/r log windows as well. When worked, the user clicks on log, and all information, including the actual information from the H.F. rig (VHF also depending on make and model of radio) is logged.

This description sounds simple, and it is. It sounds like the basic computer/tnc/radio scenario, and it is. But, CATCC has so much more going for it that to try and write any more here does not do the software justice. It must be seen and used to fully appreciate the CATCC user interface and software features. The CATCC_PR.ZIP file which is available for downloading from the Bytewise BBS and the ARRL BBS has additional information and .BMP files of captured actual screen displays that provide more of a feel for the actual software in operation.

Currently supported are Yaesu radios, with Kenwood support being integrated. Sample Kenwood control programs have been written as of this date, but not fully integrated into CATCC. Planned is support of ICOM, Ten-Tec, JRC and SGC radios as well.

The Shareware/Trial version of CATCC, the CATCCjr version, will have many of the features of the full commercial version, it is basically a stripped down beta version of the latest commercial version. The missing features will include full logging and award tracking, only a CT compatiable .RES files will be created. Also missing will be the full DX-Graph(tm) component, and DX-Sleuth(tm) and other features that will only be available in the registered version.

The registered version, CATCC, brings with it full logging and award tracking capability supporting DXCC, WAS, WAZ, IOTA, VUCC with excellent analysis, reporting and label printing capabilities, as well as the full DX-Graph(tm) and DX-Sleuth(tm) real-time analysis tools. Registration obviously entitles the registrant to product support via the Bytewise BBS and Internet e-mail. Also one FREE upgrade (postage and handling required), resonably priced upgrades in the future, the CATCC user Newsletter and full access to the Bytewise BBS.

It is planned to add new features, such as new hardware support regularly, and to improve and refine CATCC, with upgrades about every six months or so.

For additional information on CATCC call the Bytewise BBS at 1-908-363-2760 and download CATCC_PR.ZIP which has a demo of the Accu-Rotor(tm) program module and other example programs or send e-mail to info@bytewise.org

/s/ Steve Hajducek, N2CKH

Accu-Rotor, AutoGrab, AutoMode, Band-Watch, ByteWise, CATCC, CATCCjr, DX-Calendar, DX-Graph, DX-Alert Filters, DX-Sleuth are trademarks of N2CKH.

The CARA Flea Market will be held Saturday September 23rd at the
Mount Pleasant Community Hall 608 22 Ave NW Calgary, Cost is a
loonie to enter, $5.00 for a table. Sellers doors open at 8 AM
and general public at 9 AM.

HIGH RIVER AMATEUR RADIO CLUB

The Saturday coffee clatch in High River has been moved to new
location called AL's CAFE, located in the Pioneer Mall, beside
the ALLWEST GROCERY STORE(which is in the mall also).Still held

at 10:00 AM.

The VE6CQM-1 node is off the air until we can raise enough money for a node TNC radio,and power supply.The equipment we were using was on loan to us from the great AMATEURS from Medicine Hat.

As you know we have VE6HRB now linked to S.A.R.A. our local net is Mondays at 7:30 local time, we may try to have a net which includes OIL and ROT but we have to discuss that further with all clubs concerned.
73's for now. Roy VE6ERW

CFB CALGARY SPECIAL EVENT

Canadian Forces Base Calgary will be holding Armed Forces Day on Saturday September 17, a special event station will be on the air during this display of military equipment to the general public. The station will be located at Hanger 1 Currie Barracks, the call sign will be CF6AFD, and will be operating from 1600 UTC until 2359 UTC. Frequencies will be 7240, 14135, 14275, 21250 +/- QRM and 3.850 on request for those without the higher band privileges. VHF we will be on 146.85 VE6RYC repeater, 146.61 VE6OIL repeater, 147.39 VE6WRT repeater, also 146.52 Simplex. Those who wish contacts with this station via terrestrial system will have to bring up the system and contact us. Packet via the VE6IPG converse gateway, packet messages can be send to CF6AFD@VE6YYC.#SAB.AB.CAN.NA, due to our arrangement with our callsign packet message arriving before will wait until Sept 17 those arriving after will be killed, please time your packet messages.
We are trying to get on 6m but nothing confirmed yet. Maybe if possible via the VE6KQ 440 to 6m repeater in Calgary.
See you on the air.

ARRL VHF QSO PARTY

The ARRL VHF QSO Party will be held on the weekend of September 9 from 1800 UTC, to 0300 UTC Monday September 11. Look for stations contesting on 146.55 in the 2m band on FM and around 144.22 on SSB. Get on the air and help out the guys that contest on VHF.

RADIO AMATEURS OF CANADA 2m SPRINT

The RAC 2m Sprint will be held on the weekend of Sept 23/24, this is a sprint contest therefore it will be brief, Details to come as they are release in TCA. Look for VE6RAC in and around Calgary FM and SSB.

USA/CANADA ISLANDS CONTEST

The US Islands Awards Program (US I) and the Canadian Islands Awards Program (CISA) present their 1st Annual Island

Contest!

OBJECT...Work as many W and VE islands on HF as possible.
SWLs are welcome to participate. All fresh or saltwater
islands count provided they are registered with US I or CISA.
If you're not sure if the island is registered, please contact
John, NL7TB (Rt. 2 Box 2161, Benton City, WA 99320) for state
islands or Garry, VE3XN (5 McLaren Ave., Listowel, Ont.
Canada N4W 3K1) for Canadian islands. *Please include a SASE*

WHEN...Start 1700Z Sat. September 23 End 2300Z Sun. Sept. 24.

CATEGORIES...A. Island station (W or VE only)
B. Non-island station (anyone anywhere)
Island stations work as many other island and

non-island stations as possible. Non-island

stations work island stations only.

EXCHANGE...Island stations send signal report, island number and
island name. Non-island stations send signal report,

state, province or country. WORK EACH STATION ONLY

ONCE PER BAND REGARDLESS OF MODE.

SCORING...1. Island stations receive 1 point for each non-island
stn worked and 5 points for each island stn worked.

2. Non-island
stations receive 5 points for each island station

worked.

MULTIPLIERS...Each different state, province or territory counts
as a multiplier for category A and B.

SUGGESTED FREQUENCIES..."General" phone or CW portion of bands

AWARDS...Handsome red, white and blue certificates are available
to anyone submitting an entry for A or B along with

$5.00 (US) and a certificate-sized SASE. Special

recognition for the "TOP TEN" entrants for each category
will be listed on each certificate and mentioned in a

future US I packet bulletin (ISLDX).

CONTEST MANAGER...Send all entries to:
John Douglas, N0ISL
19164- 147th Street NW, Elk River, MN 55330 USA

ALL ENTRIES MUST BE RECEIVED BY OCTOBER 31, 1995 TO BE ELIGIBLE

Received off Packet from NL7TB

This ends another edition of the ARLA Alberta News please support ARLA it is your provincial Organization, contact Elmer VE6BLO.

In response to a question posed earlier concerning European radio
amateur newsgroups, I posted a question in various places and I've
been given the following to date:-

German newsgroups:-

de.comm.ham
z-netz.telekom.amateurfunk
fido.ger.darc
maus.kurzwelle
zer.z-netz.telecom.amateurfunk (in German)

Austrian newsgroups:-

at.fido.kurzwelle
at.fido.shortwave (in German)

Australian newsgroups:- (I know, non-EU, but maybe of interest)

aus.radio.amateur.* (several)
aus.radio.broadcast

Bear in mind that not all of these newsgroups may be fed into your particular
news feed source, but at least if you know of their existence, you can ask
about receiving them if your'e interested.
I'm surprised that there aren't more newsgroups than this, but there we are.

Thanks to all those who mailed replies / information to me.

Best 73's, G8GFH

I have a few of those RT-68's and have fun using them just the way they are. Talk lightly and the nbfm'ers can hear you, or talk loud to another rt-68 and its the only thing that will hear you. you'll get used to limiting the audio. Any-way , thats how i use mine. Also have a few rt-67's and rt.70's. Want to convert the 70's to cw.

See-Ya

4531. Re: ARRL stands for itself

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-11 00:00:00 UTC
From: Hans Brakob <71111.260@CompuServe.COM>
Message-ID: <430d58jgs1@mhadf.production.compuserve.com>
Source record: 238736

>I find it disturbing that i have not heard any "offical"
>stand on this on-going "drop-the-code-on -hf"
>arguement.

The ARRL official stand on this issue, as defined in an
official Board of Directors Resolution published in QST,
March 1993, on page 78, is:
the ARRL ....."REAFFIRMS its continued support for a
demonstrated proficiency in the International Morse code
as part of the license requirements below 30MHz".

This is only an excerpt, but the tone of the whole resolution
is AGAINST "no code on HF". There is nothing wishy-washy about
it, and no attempt to "sit on the sidelines" on this issue.

4533. Creating a DX newsgroup

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-11 00:00:00 UTC
From: todd@tj.org
Message-ID: <430tvr$d5d@news.scruz.net>
Source record: 238738

Last week in a thread entitled "The new DX reflector" I wrote:

> why doesn't some energetic soul post an RFD for
> "rec.radio.amateur.dx"?...If the response is positive,
> I *may* even volunteer

This statement drew seventeen responses (here in this newsgroup, via private e-mail, or on the "twisted pair") from DE, OE PA, VE, and W. Fifteen of these enthusiastically supported the idea, one mentioned "alt.ham-radio.dx" (which I have been unable to find on any of the news servers to which I have access), and one correctly pointed out that a newsgroup is not necessarily the best medium for some topics (such as last minute information about a pending DXpedition, or real-time information about a DXpedition in progress.) I received no messages specifically opposed to the creation of a DX newsgroup. Consequently, for all my sins, I am preparing an RFD (request for discussion) for "rec.radio.amateur.dx" as prescribed by the guidelines for creating new Usenet newsgroups.

If you support the creation of this newsgroup, I invite you to send me input for possible inclusion in the RFD addressing the following topics:

o good reasons why such a newsgroup should be created (for use in the justification section);

o the types of discussion you would expect to see in such a newsgroup (for use in the charter section.)

While the messages of general support I've received thus far are greatly appreciated, what I need now is usable content in these two areas. If you plan to contribute, please try to do so ASAP, as I hope to publish the RFD by sometime next weekend.

If you're opposed to the creation of this group, *please* try to refrain from sending me e-mail to that effect. There will be plenty of opportunity to express your opinion in places where it will have an impact once the RFD has been posted.

If you are unfamiliar with the process of creating a new newsgroup, watch for a message entitled "RFD: rec.radio.amateur.dx" for further information....

4534. Stranger in a Strange Land

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-11 00:00:00 UTC
From: boonie@usa.net
Message-ID: <boonie.121.0001DDCC@usa.net>
Source record: 238739

Excuse me, folks, may I break into this thread to ask a question?

I am writing a book for scouts (i.e. boys 11 to 18), the primary object of which is to introduce them to a variety of activities which were once common hobbies or activities but which are now not immediately accessible. (It is actually a little more complicated than that, but that's the general idea).

I wanted to have a section on radio, but I am finding that it is very difficult to enter this world to get a general overview. Yes, I have been to the public library. Not much help there, although there are a number of nice books providing the wrong sort of information. I suppose that I could go to meetings of a radio club and simply ask these questions, but...well, in a sense that is what I am doing here. Please consider me a stranger rather than a newbie, i.e. saying, Try this and see if you enjoy it, is not really an answer, since I am looking for information rather than to join the hobby. The reason why radio is in the book is that I have the notion from somewhere that radio is a very good hobby for boys to take up, but for myself personally I already have very little time.

Here are my questions.

(1) Please assume that there is a boy who has no personal contact with anyone whose hobby is radio. Assume that he can find someone to teach him to solder. He is a bright 12 year old, but he is by no means young Edison or scientific prodigy. He is a little shy, and he doesn't know a lot of adults. He has a notion that it would be fun to build a radio that really works. He doesn't want to buy a kit from radio shack. The oatmeal box is part of the fun. Question: what radio should he build and how much will it cost him? What kind of messages will it pick up?

2. Same kid. He has the idea that it would be fun to build a radio, or perhaps if cheap enough buy a radio, that he could take into the woods. He pictures himself stringing up an antennae and communicating in Morse code with people all over the place. The fact that it is portable and in Morse code is part of the fun. He read a story about the Nobile expedition and the ham in Russia who got their signal, and that's the sort of thing he pictures. He also wants something that could be used in an emergency in very remote places. Question: how does he get started? Remember that he is not going to begin by attending meetings of the radio relay league or anything like that.

The object of the exercise, or at least one object, is to get the kid into the activity, so that he is doing it for real, without his having to know anyone personally. And then, presumedly, at some point some adult will say, hey, what to you have there? Well, that's pretty nifty, son. I do that sort of thing myself.... and perhaps the mentoring begins. As opposed to the other model, which probably apples to most kids in radio, which is that they get

introduced by an adult or organized activity at school or home. Certainly it is a difficult hobby to access by simply wandering in at that age.

Thanks for
your help.

4537. How to auto patch on repeater

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-11 00:00:00 UTC
From: billh33047@aol.com
Message-ID: <430dir$sdj@newsbf02.news.aol.com>
Source record: 238742

Sorry for what may be a dumb question. Iam a new no code tech who just purchased his first 2m radio, a yesauft11 and have programmed all the local repeaters and the radio works fine. My repeater handbook lists repeaters with an A prefix that supposedly are open to non members yet I have yet to be able to acess them. I have been under the impression that to acess an autopatch you depress PTT then hit star or pound release and wait for dial tone. so far no luck. Thanks for any help!

Why can't Techs fill that role? A Tech *can* learn more (or know more initially) than what's on the test. That was the *whole idea* behind the no-code proposal!

Can't "techies" find enough to tech about above 50MHz? Conversely, do no "techies" ever learn the code and upgrade? You have quite a jaundiced view of those with HF access. It makes no sense to me that you want to flood HF with "techies" at the same time that most commercial interests are flooding *out* of HF.

Why do you want a higher-class license? What exactly do you want to
move up *to*? You talk about technological exploitation (exploration?)
Is that why you need HF access? Try as I might, I just can't make
sense of your particular argument.

4544. TH79A diode jumpers

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-11 00:00:00 UTC
From: 100670.3637@compuserve.COM
Message-ID: <950911073453_100670.3637_EHK101-1@CompuServe.COM>
Source record: 238749

To all those who would like to know what all the jumpers do in a
TH79A.

From left to right, looking at the jumpers:
(when removed this is what happens):
1st= European version, 144-146MHz, 430-440MHz
2nd= US version
3rd=unknown
4th TH79A becomes channelised radio.
5th=unknown
6th inknown
7th=TH79A becomes general market version (like US but with reduced
DTMF options and some other changes.

Best,
Peter, KC1QF

: some, mostly DXers I suspect, but Morse interoperability doesn't
: require manual methods on *both* ends of the circuit.

Gary, your point would carry more weight if you compared apples to apples.
What does carrying a bucket of water from a stream have to do with
amateur radio ? The last time I checked, no ships at sea had been saved
by carrying a bucket of water. In all phases of life, one must in fact
prove a reasonable competency at a lower level before moving on to a
'larger' or 'higher' level. You must already have a valid driver's
license before you can apply for a CDL. You must work the counter at
McDonalds before they make you a manager.

Since morse code is a 'basic' unit of measure when related to digital
communication modes, I don't see any problem in the requirement. This is
not to say that I support it, I just don't have a problem with it. What
I do have a problem with is the amount of competency that one must
demonstate. 20 wpm is pushing the limit for most people. You don't have
to prove that you can drive 100 mph to get a CDL. You don't have to work
the counter for 30 years at McDonalds. The international regulations do
not specify a level that must be reached. Anyone who is using morse for
a distress call is unlikely to be transmitting at 20 wpm.

'Incentive' is served in the written tests.

RE: HTX-212 Info

Gerry,
They were first available at Dayton this year, and I grabbed
one there. It works well; very well in fact. I've not had it mobile
actually, so I have not observed its performance regarding intermod
as I haven't been in the notorious RF hot areas around here. It is
convient to operate, and reasonable in size. However, there is one
fatal flaw as far as I'm concerned; you cannot store frequencies outside
the ham bands in memory! That sucks. The PL encode/decode works
nicely, and the two VFO's are handy. I think its a good value. It
just ticks me off that you can't store out of band freqs in memory.
As a result of that, I wind up using one VFO to hold one of those
freqs I'm interested in all the time. In that way its there, but
I lose that VFO for other use. There always seems to be what I call
"the Radio Shack surprise". It seems it never fails. They always
seem to build in some limitation that ends up shooting themselves
in the foot.

I believe that all readings from a *moving radar* speed meter are highly unreliable, even if the officer had good will and a pure heart. I suggest that you contact the manufacturer of your radar detector and get their help in the bibliography and case law. If it is a no-brand model, contact the larger manufacturers for help (Cincinatti, Fox, Bell etc.)

> And does anyone have any other ideas of what might be going on here?

Maybe he needed some extra tickets to meet his quota?

Maybe it is revenge for the TVI he gets from his neighbor's CB linear?

Good luck in fighting this, and please don't tell the judge that you own a radar detector. They are legal in MA, but the judge won't like it anyway.

From: Stephen.Baker@ummed.EDU
Message-ID: <199509111212.IAA17222@ummed.edu>
Source record: 238758

I got a speeding ticket last week, the cop claimed to have clocked me at
52 in a 35 mph zone, while he was moving toward me. I looked at my
speedomete when I saw him turn on his lights and was surprised to see
I was going about 35! The other shocking thing was my new Uniden
radar detector was on and was silent until I started pulling over
well after he had put on his lights and was almost even with me. I do
have a 25w 2m rig and was keying it to see if I could get a beep from
a repeater but that never even triggers my radar detector.

I think he didn't actually clock me, but "guessed" my speed, or saw the
radar detector and had it in for me but I have no reason to think he
he should, as I'ld never seen the guy before.

Does anyone know of any articles that look at 2m QRM with police radar?
And does anyone have any other ideas of what might be going on here?

4554. Danger - Fluke voltmeter malfunction

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-11 00:00:00 UTC
From: Bill Schaff <schaff@iiiv.tn.cornell.edu>
Message-ID: <431ul7$iiq@newsstand.cit.cornell.edu>
Source record: 238759

This information has been floating around the 'net. I don't know anything about the accuracy of it, but I'm posting it as a 'better safe than sorry' precaution.

SUBJECT: FLUKE METER HAZARD AND PRODUCT RECALL NOTICE. THE PROBLEM: Under certain conditions, some models of FLUKE Digital Multimeters have been found to display a reading of ZERO volts when the voltage being tested is in excess of 400 volts dc. Using one of these meters can cause someone to mistakenly believe that a high voltage source has been de-energized. THIS IS A POTENTIALLY LETHAL CONDITION.
AFFECTED MODELS: Fluke Series II; Model 21, 23, KIT-23, 70, 73, 75, and 77, imprinted on case bottom with serial numbers between 60990000 and 63752000. NO OTHER FLUKE METERS ARE AFFECTED. If the serial number is preceded by a 9, or followed by an R, this notice does not apply.
DISPOSITION: 1. If you have one of the affected meters, take it out of service immediately. 2. The meter must be sent to FLUKE for modification (no charge). If you have one of these meters you must have it fixed even if you do not usually test high voltage dc. 3. Send meter to : Fluke Technical Services, 1150 W. Euclid Ave, MS 70S Palatine IL 60067-7397.
Enclose your name, company name, address, phone, Model Number, Serial Number. Do not return the test leads or manual.
The phone number of the FLUKE Technical Support Group for further questions is: 800-447-7940.

>

This is the new 'code grabber' technology. I have also read of low-tech
'code grabbers' who find a car parked in the street or driveway, get inside
the car because the doors are unlocked (or break in), then use the owner's
garage door opener remote to open the garage door, allowing them to
burglarize the house. Not glamorous, but effective. Because
pre-meditation and special hardware are not required, this method is likely
to be in much more common use, at least by the common criminals. Realize
that the opener remotes are equivalent to your house keys, and be careful
where you leave them.

The present-generation receivers likely have logic to complicate an
exhaustive code search by shutting themselves down for a period of time
after a few wrong codes are received. One possible defense to the 'code
grabber' could be a two-way system where the garage opener challenges the
transmitter with a random number, which is encrypted with the secret code
(hopefully all of these much more than 12 bits) and sent back. Even if
both parts of this transaction are monitored, the secret code cannot be
deduced, and the information gathered is useful only if the garage sends

exactly the same challenge again when the unauthorized person is trying to open the door. If part of the secret code has to be entered by the homeowner at each use, then even if the owner's transmitter were stolen it couldn't be used immediately to open the door. Having to enter a code every time would be inconvenient, and any sort of two-way system is naturally going to be somewhat more expensive than a one-way one.

Another approach would be to make the garage door opener work like a time-lock, allowing opening by remote control only at certain times of day. (At other times, it would be necessary to use a key). This is likely to be acceptable only in rather limited circumstances.

>They would make it foolproof if fools weren't so ingenious.

Like everything else, users of this technology need to be aware of its loopholes and limitations, including how it can be exploited for criminal purposes and what defenses are available.

From: stickler@seminole.iag.net
Message-ID: <43231b$q6d@news.iag.net>
Source record: 238761

I just picked up a President 2150 10m all mode transceiver at a hamfest
-- sans manual -- and am trying to either locate a manual that I can
copy, or get the phone number/address of the manufacturer (if they are
still around...)

Also, does anyone know how to adjust the contrast on an LCD display?
I have the rig mounted sideways on the hump of my truck so that I'm
viewing the display at about 45 degrees below the rig, and the readout
is almost invisible at that angle. The contrast appears to be set for
a viewing angle of 20-40 degrees _above_ the rig.

Any help with the above two items will be greatly appreciated...

4557. Spelling of call signs, which way to go?

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-11 00:00:00 UTC
From: Coen Waasdorp <waasdorp@inter.nl.net>
Message-ID: <pmSsWEASiJVwEwHg@inter.nl.net>
Source record: 238762

Hi all,

I returned a few weeks ago to the hobby of ham-radio and noticed that the bands did get more busy than they were around twenty years ago.

More crowded bands means more QRM, so, consequently a bit more difficult to catch the call-sign in voice mode.

The spelling alphabet, I assume, was created to have a way to, among others, assist in the correct identification of the call sign.

I would expect, that by repeating the spelling of one's call sign, the objective is to have this call sign identified in a quick and positive manner.

However, I find that it's perhaps more difficult to identify the station by the spelling methods used by a lot of ham-operators, Why?

These respective operators use, preferably (it seems) a least three to four different spelling alphabet's. E.g. (the call sign is imaginary):

Here is station AB0CDE,
Alpha Bravo Zero Charly Delta Echo,
Anthony Bernard Nought Charlotte Dipole Edward
America Brazil O Cyber Don Emanuelle

So, instead of trying to transmit the correct call sign by repeating the same spelling (which would result in a easier way to positively identify the station), there is even more confusion all around.

Am I alone in this, or do others have the same experience and if so, how could be go about.

p.s. When I was a merchant marine radio operator, the international agreed spelling method was used by every one. So "A = Alpha" was used by the Dutch, French, Chinese, Japanese, Americans, Brazilians etc etc.

Most groups that run a repeater require you to join the group in order to receive autopatch access; there are very few open autopatches. Fees are usually quite nominal; something like $20/year. Autopatch access is generally more complicated than just hitting the # key; you are given an access code you must use to bring up the patch. Check with the club that runs your local repeater.

>assumption 1 wasn't valid, the hams would let you know.

False assumption. On the maritime frequency of 500 kHz there was a
shipboard op with the worst fist known to mankind. I was sure he was
sending with his foot. Any time he call my shore station I'd always
try to pass him off to a West Coast station, but they'd try to pass
him off to someone else. No one wanted to take his traffic, for no one
could understand him. Yet, if I cranked my bug up to say, 30wpm he
had no trouble understanding me. Thus, being able to understand code
is certainly no guarantee one can send. And letting the sender know
he has a bad fist is useless if he doesn't make any attempt to change.

^^^^^^^^^ ^^^^^^

Most use spread-spectrum, simplex only and are not repeatered. At any
rate, when you transmit, FCC regulations require that you *know* your
frequency and mode of transmission. So what's the problem?

I think your thoughts in <1995Sep10.205327@clstac> have been repeated here,
so the frequency is clearly far too high. Surely your personal physician
is the best person to testify to this in court.

I know US hams often operate while in Canada and I have operated while in the US but I would prefer to see a ruling from Industry Canada on this. Recently, we have had the visit of a Polish ham who wanted to operate our club station. Our club station manager called the licensing authority and they insisted that the Polish amateur be subjected to a knowlege of canadian regulations exam by our club manager who is also a delegated examiner (something like the VEs).

In reading the regulations, I saw no indication that a special treatement should be given to US amateurs. USA and Poland are two countries we have reciprocal agreements with.

I personally have decided that I would not operate in the USA before I have checked with the licensing authority there and I think it would be safer to do so here.

: Herndon Elliott
: Amateur Radio: KE4KUZ (147.505Mhz or 444.575Mhz)

That may not be true. The only freq bands that are in hot demand are the VHF/UHF for business. The HF bands with there fickle propagation are not in demand for business. The code is just a way to keep lids of HF where old men talk about who died last week and the hip surgery. If you followed the last Carabian huricane on 14.300 14.325 14.268 and 14.273 you would notice nobody handled trafic with cw it was all phone. You would also notcie several LIDS with extra call signs. They know code but are also obviosly senile.

Philip,

After providing this service for more than a year and several missions
I had to pull it off the air.
Most of the people listening to it did not know morse code
So how did they know who I was... :->
Running 170 watts on 2 meters (under Vox and audio delay) into a diamond
x500 on a 56' tower this setup covered 50+ miles and could still be
heard on a ht very easily

Reason to terminate

Too many complaints
tooo many know it alls
toooo much hassle to provide dedicated equipment for the LONG duration
flights

I applaud The HF ops who do it wa3nan and the others at least they have the
support of clubs in their adventure

4572. spurious emission on 146.52 MHz from Kenwood TM742

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-11 00:00:00 UTC
From: neil_fullagar@ccgate.apl.COM
Message-ID: <9508118108.AA810859645@ccgate.apl.com>
Source record: 238777

This weekend I noticed a mysterious signal on 146.520 MHz (yep, national calling frequency.) It had, amidst lots of white (offwhite?) noise, a blip each second. I almost thought that someone was retransmitting WWV, until I listened long enough to see that there was no announcement of the time... The signal was moderately strong on my (mobile) TM742 (though a stong signal will get through over it), and fairly strong on my (handheld) TH79. Eventually, I discovered that:

1. The blips were in sync with the seconds update on the TM742 clock; and

2. The signal went alway when I turned the TM742 off.

So now I have a mobile rig that jams weak to moderate signals on 146.520, not only from being received by that rig but by other nearby. Has anybody else encountered this? I did recently add a 1.2 GHz band unit - I don't know for sure if the TM742 behaved this was before that.

Quite a weekend - I also discovered that my Sony answering maching radiates strongly on 144.000! I'm almost afraid of what I'll find next.

Using the newsread's 'KILL' option is a good solution: it doesn't
censor him, it just prevents you from having to read his contributions.

What we need is a KILL option that will also filter out all of the
followups from people who just can't sit on their hands.
- Brian

This is about the same as we had in Menlo Park, Calif. about 10 years ago. ARRL was *no help* at all with fighting the local antenna ordinance.

The only response from ARRL was the local EC claiming the the very strict limits passed by the city were no problem -- since they allowed all existing antennas as legitimate.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 11/2330Z SEPTEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 11 SEPTEMBER AND FORECAST FOR 12 SEPTEMBER - 14 SEPTEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 68/2

GOES satellite data for 10 Sep
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: NA
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
12 Sep 13 Sep 14 Sep
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 12 Sep: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active to minor storm

Estimated Indices : A K Observed A Index 10 Sep
Learmonth 22 5434 3333
Fredericksburg 22 10
Planetary 24 10

Observed Kp for 10 Sep: 2133 2233
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
12 Sep 14 Unsettled
13 Sep 12 Unsettled
14 Sep 7 Quiet to unsettled
COMMENT: Observed conditions:
8 Sep minor storm
9 Sep unsettled
10 Sep quiet to unsettled
Activity was due to a favorably positioned recurrent coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
11 Sep normal normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
12 Sep normal normal fair
13 Sep normal normal fair
14 Sep normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
11 Sep 3 About 10% below predicted monthly values (limited
data).

Predicted Monthly T index for September: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
12 Sep 5 About 5% below predicted monthly values
13 Sep 15 Near predicted monthly values
14 Sep 15 Near predicted monthly values

COMMENT: Darwin MUFs: near to 15% below predicted monthly
values.Townsville MUFs: near predicted monthly values.
Hobart MUFs: about 15% below predicted monthly values.

No need for an expert witness. Wrap yourself in aluminum foil before going
to court. The Faraday cage will will contain your aura, thus allowing the
judge to identify the thought frequency/bandwidth and evaluate the case.
Bring an Optoelectronics Scout along and insert into any convenient orifice.

Ah, yes; nostalgia time. Before the days of the dreaded 'minimum order $' policy (mail rates were lower, too). "Hacker" had an entirely different meaning, and many distributors supplied parts data with the order at no extra cost (Poly Paks was one of these, and they moved a LOT of surplus electronics).

Some pretty good sources are still around. BG Micro (Dallas) and R&D Electronics (Cleveland) are two. Mouser is good for a large stocking distributor. Radio Shack? I leave that evaluation to you. But, like you, I sometimes miss those kinder, gentler times.

It's only a matter of time. The sheer numbers of no-coders who wish to operate HF without wasting their time learning an antiquated mode of communciation like Morse will demand it. Their effort will be helped by well-heeled commercial interests who wish to sell equipment to these thousands of would-be HF operators (Radio Shack and their proposed new codeless class, etc.)

AMEN!! My thoughts exactly.

How many of those oldtimers who can copy CW at 20+ WPM and insist that "I had to learn it, so they have to learn it too!"...how many of them are capable of operating a personal computer? Even a simple function like word processing or connecting to the Internet. Not many, I'd guess.

Which of these skills do you think is most useful in 1995?

>will no-code Extras save our frequencies?

By finding new and innovative uses for them. By having the expertise
to build and propogate trunked repeaters or other goodies that the
stogy OFs don't or won't understand.

>What do CW, Morse code or (yawn) spark gaps have to do with wireless
>networking technology?

Nothing - that was my point.

> To the extent that hams may be experimenting
>with it, are they primarily using HF? Which amateurs did you have in
>mind who *do* need to know about spark gap "generators"?

I was referring to a group of code lovers who believe that "since I
had to go through it you gotta" about the code test. I must not have
been making my point clear. CW is like shoeing horses - it is a
necessary art, but one with very little future growth potential and
absolutely no technological exploitation possiblity. If we don't
change our rules to allow techies to get into the higher license
realms, the future of ham radio will be left to a bunch of QSL card
collectors who want nothing more than to chat (via code or voice) with
somebody from another distant location . Yawn.

>This is yet another post written as though the no-code Tech license
>didn't exist. It's been four years now, people. Talk about trapped in
>the past...

No, its the license I hold. I want to move up, but I can't, because
of that blasted code requirement. Code is useless, and it will never
support further technological exploitation. Its time we recognized
that and and made the code requirement it what it really is - an
acknolegement of the past art and craft of radio that holds little
promise except as a laboratory curiosity or a museum piece.

Don't hold me back from becoming a higher class license just beacuse I
dont know about the code. I don't care or desire to know the code,
and if I learn it to pass the test, I will immediately erase that part
of my softdisk when I get done with the test.

I though it was Fred Lloyd, AA7BQ, who promised that for his QRZ CDROM.

(BTW I like Pete's compilation very much, although I find that RT Systems' SAM to be a far better callsign program, if that's all one needs. The browse modes for name and callsign searching in SAM are very good.)

From: wbb@heavenly.eecs.berkeley.edu
Message-ID: <430d6o$7ou@agate.berkeley.edu>
Source record: 238835

A friend in Nevada asked about the appropriate manner to rig an
external push-to-talk for his FT-11R. In the FT-23R he had just
dropped a 2.2k resistor in shunt with the mike contacts to enable PTT.
He tried the same with the -11R, and got "hum" (his description).
Any tips?

Thanks!
Bill -ki6dg

Those of you that have a Chrysler product with the "Infinity" sound system will be in for a surprise if you attempt to monitor 146.52. Yep, the digital display in the clock/radio transmits enough signal there to keep the squelch open.

I was told that Chrysler Corp. will replace the unit with one having a different clock freq but I have not verified this.

4596. ACC Repeater Controller?

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-12 00:00:00 UTC
From: Dmswift@aol.COM
Message-ID: <950912104523_97405836@mail02.mail.aol.com>
Source record: 238589

The recent articles WRT ringing up pagers via autopatch piqued my interest in the ACC Repeater Controller.

Our repeater uses this controller. Aproximately 1 year ago the club received an announcement concerning an upcoming release of a new generation of software from ACC. As I recall, this new SW involved a daughter board to be installed where the current EPROMS were installed. The new SW was to add some pretty nice goodies for an amateur repeater operation, as well as increase macro memory storage capabilities. Our club authorized the upgrade to the new SW.

So far, I have heard nothing additional from ACC. Is ACC still in business? Has this SW advanced from vaporware to reality? Any information you might have would be appreciated.

Thanks!

Richard J. Lemay (lemayr@cnwl.igs.net) wrote:
: I know US hams often operate while in Canada and I have operated while
: in the US but I would prefer to see a ruling from Industry Canada on
: this. Recently, we have had the visit of a Polish ham who wanted to
: operate our club station. Our club station manager called the
: licensing authority and they insisted that the Polish amateur be
: subjected to a knowlege of canadian regulations exam by our club
: manager who is also a delegated examiner (something like the VEs).

: In reading the regulations, I saw no indication that a special
: treatement should be given to US amateurs. USA and Poland are two
: countries we have reciprocal agreements with.

Have a look at R.I.C.-25 in the General Radio Regulation, Part II (GR2), 45.(1)(a), and 57.(2)(a) - (c) . Americans do get a special break under the regulations, just as we get a break under U.S. F.C.C. rules.

: I personally have decided that I would not operate in the USA before I
: have checked with the licensing authority there and I think it would
: be safer to do so here.

Have a look at "Part 97 of Chapter 1 of title 47 of of the code of Federal Regulations" (Gee, isn't that a mouthfull :-)). In particular look at 97.107(a) which goes into the breaks that Canadians get in the U.S..

The whole of the U.S. regs are kicking around the net in several places, you should not have to look to hard to locate a copy... Keep in mind that about the only good thing to be said about the U.S. regs is that they make the Canadian regs seem pleasant to read (and no this is not a compliment to either).

Message-ID: <9508128109.AA810939141@ccgate.apl.com>
Source record: 238595

I'll be off to Massachusetts Thursday through Sunday of next week. Family business and other matters will take me to Boston, Taunton, Cape Cod, and Amherst areas, but I don't know just where just when. I'll have 2m and 70cm capability on the road.

I'd appreciate private email (to avoid boring everybody else) informing me of:

1. Nets (ARES/RACES or social) in those areas, those days. (Yes, I have an ARRL net directory but most VHF/UHF nets are not listed there, with good reason.)

2. Face to face opportunities (local ham gatherings for Saturday breakfast like those I've enjoyed in North Carolina, etc.) in those areas.

3. Open repeaters offering wide coverage and/or friendly, interesting conversation in those areas. (Yes, I have a repeater directory but you generally can't tell from that which have good coverage, many listed as open have unpublished CTSS tones, and no book tells where the FB hams are!) (And Burt, don't bother telling me there are no interesting or friendly hams on the Cape.)

I'd like to second that. It was great getting an e-QSL the day after my contact. BTW, I also like their idea of automatically snail mailing a real QSL card for your first contact if they can find your address in one of the common databases.

XR0Y has certainly set the standard for future DXpeditions.

ACC has left the amateur radio business, so politely pointed out by our friend in Atlanta.

Version 4.5 required the Computer Interface Board (CIB), which offered expanded EEPROM storage and a vocabulary expansion. The latest project, known as Version 6, was cancelled when ACC exited the business. Link Communications, of Sydney, MT, has purchased all the completed firmware and may have more information available.

All registered controller owners should be receiving some formal communications from ACC (but I haven't got mine, yet!).

For the record, ACC provided Amateurs served by my repeaters in three states with very valuable (and continuous) service for over ten years.

I'm happy to report ACC has thrown in the towel in the Amateur repeater
controller business.

I'm sorry that this might put ACC owners into a difficult spot, but I
am glad to see them go. They weren't doing the Amateur community any service.

In two years of operation I have had this message once. I had to
perform the reset and re enter all info.
It happened about a week ago and has been behaving ok since.
Another licensed member of my family was operating when it happened
and I was not present to observe what caused the problem.
Others have reported that it is caused when running with greater
than 12 V applied while using the rubber duck antenna

Hello American amateur radio stations!.

I want to contribute an article that about history of Swan
and Drake Co. to a Japanese Ham Radio magazine.

So I need history data of Swan and Drake Co.
Does anyone know history, please let me know.
By whom was the company established,when,where....etc.

Please give me a E-mail, Thank you!.

I agree except this is not a relatively weak DX station. They wore so loud on 160 I could hardly believe it. They must be using some of NASA's antennas. I haven't worked them on 12M yet but have worked them on all the others 160 thru 10 on CW of course.

They seem to be a well run operation. Sharp operators. If you miss this one you didn't try very hard.

The E-mail QSL is a nice touch. Now you know your are in the log. No need to go back for an "insurance" QSO. It will be a while before the DXCC Awards committee will be able to accept this for DXCC credit.

4613. Problem with HTX 202

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-12 00:00:00 UTC
From: ag001@lafn.org
Message-ID: <1995Sep12.023837.28104@lafn.org>
Source record: 238606

The antenna in the HTX 202 seems to like redirecting the RF back to the set causing the PLL to unlock, thus giving the message "Err 2" and requiring the unit to be returned to Tandy for servicing. Is this something one can fix one's self or is it a constant problem with that model? I am thinking of what to do with it when the warranty expires.

ARRL Bulletin 86 ARLB086
From ARRL Headquarters
Newington CT September 12, 1995
To all radio amateurs

SB QST ARL ARLB086
ARLB086 Quello opposes FCC cuts

Long-time FCC Commissioner James H. Quello has opposed a proposal by Chairman Reed Hundt to close some Commission offices and reduce staff.

Quello said that while in principle he supports the idea of streamlining when possible, that he was ''not prepared'' to support Hundt's proposal, especially concerning staff reductions. ''I am concerned,'' Quello said, ''with the rushed timing of (Hundt's) administrative approach. I believe any reductions should have been discussed with Commissioners in advance of a one-day notice, particularly while Congress is in recess and some Commissioners are on vacation.

''In my view, any reorganization of this commission must take careful account of our core functions,'' Quello said, ''and assure that their integrity is not compromised. I am not sure the plan described... will achieve this, particularly in light of the sharp disagreement that has arisen over the staffing and functions of the field offices of our Compliance and Information Bureau. In my opinion, there are other areas for reductions that do not involve the vital local public service of the Compliance and Information Bureau in numerous large cities.

''I will pay particularly close attention to assuring that those parts of the Commission that allocate the spectrum, safeguard its integrity, and license its use are not adversely impacted,'' Quello said.

The proposal would close three FCC regional offices, nine field offices, and all nine monitoring stations. More information appeared in a previous bulletin and will appear in October QST League Lines.

Special Bulletin 50 ARLX050
From ARRL Headquarters
Newington CT September 12, 1995
To all radio amateurs

SB SPCL ARL ARLX050
ARLX050 Sky search gets name

A name and starting date have been chosen for a radio astronomy project that aims to involve large numbers of radio amateurs.

The SETI League has chosen ''Project Argus'' as the name for its upcoming search for extraterrestrial intelligence (SETI). The SETI League hopes eventually to involve 5000 amateurs worldwide in scanning the sky. Earth Day, April 21, 1996, is the target date for beginning the project.

The name Argus was chosen in 1971 at Stanford University for a proposed ultimate SETI receiver that was never funded. Argus was a mythological figure with 100 eyes that could look in all directions at once.

Dr Robert Dixon, W8ERD, a SETI League advisor and assistant director of the Ohio State University Radio Observatory, hopes to share technology with the SETI League, according to SETI League Executive Director Paul Shuch, N6TX.

More information on amateurs' role in radio astronomy was in August 1995 QST, page 37.

4618. WANTED TURNTABLE AND\OR AMP

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-12 00:00:00 UTC
From: itd@saucer.cc.umr.edu
Message-ID: <43533v$a68@hptemp1.cc.umr.edu>
Source record: 238611

I need a belt-driven turntable with at least one weight control on the tonearm. Must have 33 and 45 RPM selector and would like to have 78 RPM selector if possible. Built in pre-amp or extrenal amp would be nice. If you have a only an amp or a truntable to sell, I still want to talk.

TRUNTABLE DOES NOT HAVE TO WORK!!! If there is a problem with the motor or needle, or something else easy to fix, I'll fix it.

I will pay shipping.

Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc

The postings about European Radio in USA reminded me...

I was visiting "me brudder" in Newfoundland a few years ago (well, about ten years ago... sigh!) and we happened to be sitting in his old Ford Tempo in St. Johns (near Signal Hill actually). We flicked on the AM radio and *easily* (on that day) picked up AM/BC stations from Norway all the way down the coast of Europe to Morroco. The 9kHz spacing was easy to notice but (with the cheap Ford radio) not a big issue.

-Jeffy VE1BLL

In article <2a6.21674.545@acenet.com> brian.carling@acenet.com (Brian Carling) writes:

->As far as I am concerned, morse code is just that, a code. It is a
->binary code with on off keying used to send this digital signal.
->Amplitude modulation involves modulating a continuous carrier signal.
->AM is A3 voice modulation of a carrier. Now if you want to talk about
->_A2_, and you are all probably too young to remember the days when we
->enjoyed THAT wonderful mode, with it's low background noise, then THAT
->IS CW that IS amplitude modulation.

Well, it is amplitude modulation, but if you want to use the old
modulation indicators, A1, A2, A3, A4, and A5 are *ALL* amplitude
modulation.

->We do not refer to CW as "AM" nor do we refer to packet or SSTV as
->"AM", even though by YOUR understanding, they would be AM.

Nope. SSTV is FM. Packet is FM.

->BTW - you forgot one: SSTV is really an FM signal, and an AM SSB signal
->combined.

Nope. It is just FM, as the SSB transmitter is just a frequency shifter.

If you want to claim that, all signals that have been hetrodyned to the
final frequency are SSB -- clearly not true.

->Oh and last but not least, EVERY time you QSY, you are transmitting
->an FM signal, and when your rig is off all night it is really
->transmitting one state of an "amplitude modululation" CW signal -
->the "OFF" state. Feh!

Nope. My rig is not transmitting. However, if yours is, you are probably
in violation of the identification requirements for failing to identify
every 10 minutes.

Source record: 238618

Hello Hams,

I am doing a physics experiment for school, and
I plan to build some 3 cm (10GHz) tranceivers for
school since the old ones aren't functioning any
more, and none of our teachers know much about
radio-technology (and are rather impressed by my
knowledge [good marks guaranteed :-)])

Since I only know about HF/UHF work, and only
the basics of SHF, I need advice on this work,
and pointers to building schemes and other
info. Since I don't want to fill up this area
any more, and since I'm quite busy with my
exams and other tests, I would prefer answer
by net-mail...

I will post summaries and the building scheme
that turned out to be the most usefull, so you
all can enjoy my experiences, and avoid my mistakes.

Thanks for your help,

Rik van Riel.

ps. the transmitters will be low-powered, so we
won't interfere with the hams in our town!

... We now return to our regularly scheduled flame-throwing.

It's very simple. You send the original posting (with headers) back to
the postmaster at the originating site. Since a lot of these originate
from AOL and Compuserve for example, you send them to:

postmaster@aol.com and postmaster@Compuserver.COM

respectively. Equally good results come from bouncing these back to the
postmasters when they originate from .edu sites.

I sent a copy of an offending post to the postmaster at Tektronix and
got e-mail back to the effect that they had drawn, quartered and left
the persons skull on a pike in the parking lot as an example to others.

This is along the same lines but not exactly...

I was driving along the highway today listening to 441.375 on my HT. All of a sudden I started getting a strange short signal on my HT. It started just breaking squelch and then the signal was getting higher for each split second transmission. "Hmmm..." says I. When it was full scale every time I happened to be passing a Ford Ranger pickup. I kept driving past it and the signal slowly faded away at about 200 feet from the truck.

About three miles down the highway after I had pulled off and stopped for a traffic light, the signal started up again. Sure enough-- I looked in my mirror and there the Ranger was.

-----BEGIN PGP SIGNED MESSAGE-----

Hi HAMFolks-

Several years ago I volunteered to help as a HAM in the NYC
Marathon. I am interested in doing it again this year and am
looking for who I should contact, etc.

I have an unusual situation: I am a ham operator and a physician,
but I am not licensed to practice medicine in NY. I am also an
ex-EMT. I would like to work in one of the medical tents/stations
helping with triage, riding the ambulances to pick up patients,
etc., and be a point-of-contact for the ham-radio net.

Does anyone here know who I might get in touch with?

Thanks lots,

Ralph, N2HBN

ANARTS News Bulletin 875 10TH SEPTEMBER 1995

SSTV Information
----------------
Condensed from an article by Radioware PO Box 1478 Westford
MA 01886. Week 4 De VK2FJL @ VK2EHQ

Home Computers
--------------

Now that most home computers have plenty of memory and
excellent colorgraphics, the most cost effective method is
to use a computer with a suitable interface and software.

Note that if you want to send a picture of anything real,
you will also need a frame grabber which will add a few
hundred more dollars to the total system cost.

Amiga
-----

The AVT Master system was once very popular during for both
SSTV and WEFAX. It is composed of an interface that attaches
to the parallel port and software.

It has images with up to 4096 colors, all the popular
transmission modes, built in graphics editor, text
generation, image processing techniques to clean up noisy
pictures, and loads of other features. It was discontinued
in 1993 when AEA dropped all of its Amateur Television
products.

IBM PC
------
There are several PC-based color SSTV systems available.

Pasokon TV (Full transceiver SSTV modem, designed by J.Langner)
(requires internal IBM compatible card slot - 16 bit)

SSTV Explorer (Receive-only SSTV Modem, designed by J.Langner)
(requires IBM compatible serial port - 25 pin,
9 pin adapter option)

PC SSTV 5.0 Software Systems Consulting
```

ViewPort VGA (developed by KA2PYJ)

All the systems have some kind of hardware interface (modem or just demodulator) and software that runs on the PC. All require a VGA display. But there the similarities end.

Interestingly, many different approaches were taken with the hardware. Pasokon TV uses an interface that fits into an expansion slot inside the computer. ViewPort VGA uses an external interface that connects to the printer port. PC SSTV and SSTV Explorer use small interfaces that plug into a serial port. As does JV-FAX and MSCAN.

Software varies quite a bit in terms of SSTV modes implemented, support for super VGA cards with more than 256 simultaneous colors, ease of use, and other features.

HiRes 32 is a new version of the popular HiRes program.
It is a paint program designed specifically for use with the PC-based SSTV systems.
It has fancy text and a wide variety of special effects.

HiRes 32. Tom Jenkins N9AMR

Most of the recent growth of SSTV activity has been from the use of low cost interfaces and software on personal computers rather than expensive dedicated hardware. The next logical step is to use other common hardware which wasn't even intended for to be used for this purpose.

SLOW SCAN TV for the SOUND BLASTER. Gene Harlan WB9MMM

As the name implies, it uses the popular Sound Blaster sound card from Creative Labs.

More next week

This information was kindly supplied by Frank VK2FJL, and will run over 5 - 6 weeks. If you have any queries, contact Frank on packet at VK2EHQ. Our thanks to Frank for contributing to the broadcast.

CQ/DJ WW RTTY Contest

September 23-24

Sponsored by CQ Magazine and The IDRA Digital Journal

CONTEST PERIODS: STARTS at 0000 UTC Saturday, and ENDS at 2400 UTC Sunday, a total of 48 hours. NO REST PERIODS ARE REQUIRED.

Bands: 80, 40, 20, 15, and 10M. (five bands)

OPERATOR CLASSES: There is a High Power category (more than 150 watts) and a Low Power category (less than 150 watts). ONLY Single Op, All Band entries, and Multi-Op single transmitter entries are eligible to enter the High or Low Power categories. Enter one or the other, and so note in your log. Single band Assisted and Multi-multi entries are not eligible to enter these categories.

A) Single Op, All Band and Single Band. One person performs all operating and logging functions. Use of Spotting Nets, DX Alert Packet Systems, telephone, etc., is NOT permitted.

B) Single Op, Assisted, All Band Only. One person performs all operating and logging functions. However, the use of DX Spotting Nets or sny other form of DX alerting assistance IS allowed. The operator can change bands at any time. Single op stations are allowed only one transmitted signal at any given time.

C) Multi-Op, Single Transmitter. All band entry only. More than one person operates, logs, checks for dupes, use of spoting, etc.

NOTE: Only one (1) transmitter and one (1) band permitted during the same period (defined as ten (10) minutes). Once the station has begun operation on a given band, it MUST remain on that band for 10 minutes; listening time counts as operating time.
EXCEPTION: One, and only one, other band may be used during the same time period if, and only if, the station worked is a new multiplier. Logs found in violation of the ten minute rule will be automatically reclassified as multi-multi to reflect their actual status.

D) Multi-Op, Multi-Transmitter. All band entry only. No limit to number of transmitters, but only one (1) signal per band permitted. All transmitters must be located within a 500 meter diameter, or within the property limits of the station licensee's address, whichever is the greater. The antennas must be physically connected by wires to the transmitter.

NOTES OF INTEREST:
LORD HOWE Is. VK9. Eddie, W6/G0AZT with W6OTC, N4TQO, and KE6FV will be active from Sept. 19th till Sept. 26th. They plan to be active with three stations on RTTY, CW, SBB and to take part on the CQ WW RTTY Contest. Calls will be VK9LZ on RTTY, VK9LX on CW and VK9NM on SSB. QSL all calls to Eddie Schneider, PO Box 5194, Richmond CA 94805.

ANTIGUA, V2. Stephen, WF2S, will be operating as V26Z from Sept. 17th to 30th with his partecipation also in the CQWW RTTY test. QSL via homecall.

CAYMAN Is. ZF. JA6VZB and JH6RTO will be active as ZF2TY/8 and ZF2SF/8 from the Little Cayman. Operation from Sept. 24 to 28th on 160 to 10 meter usinf CW, SSB, RTTY and SSTV. QSL ZF2TY via JA6BSM and ZF2SF via JH6RTO.

The VK2SG RTTY DXNOTES are also available on Internet via Telnet or FTP at ab6z.ampr.org, at reflectors dx@ve7tcp.ampr.org, and digital-dx@st.rim.or.jp. See also the OH2BUA WebCluster at
URL http://www.clinet.fi/~jukka/webcluster.html

BACK BULLETINS. Anyone wishing back bulletins from June 24th, 94 to present, just send msg to W5KSI @ W5KSI.#NOLA.LA.USA.NA. For older bulletins of 1990-1991 is possible to obtain a copy from I5FLN, from 1992 up to now are computerized and you can address request to I5FLN @ I5FLN.ITOS.ITA.EU. On all request specify the year and (RTDX??/??) month/day.

For next week's bulletin send your bandpass to Bob, WB2CJL @ W5KSI.#NOLA.LA.USA.NA.

GL de (DX2) Luciano, I5FLN @ ZS5S.ZAF.AF

COMING EVENTS

SEPTEMBER 3RD DARC CRORONA 10M DIGI
23rd-24th CQ WW RTTY CONTEST

OCTOBER 21ST-22ND JARTS WW RTTY CONTEST

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President(Col) VK2CTD at VK2XSB, or the Secretary (Pat) VK2JPA at VK2AAB.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or by packet to VK2JPA at VK2AAB. Email address for the Broadcast Officer is :

patl(at)pitt.conmusic.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer

DIVISIONAL NEWS

The latest news on Aub Topp VK2AXT, from Eric Fossey VK2EFY:

"Aub's family were excited earlier this week, because doctors started to remove the artificial feeding, and tried him on light foods. Aub has now been moved to ward D4A at Westmead Hospital, and he can now receive visitors. The visting hours at Westmead Hospital are from 12 noon - 2pm and 4pm - 8pm.

"If Aub continues to make progress, he may be allowed to go home next weekend."

EMDRC Balloon launch

EMDRC Balloon launch

At 10am on Saturday the 16th Sept 1995, the Eastern and Mountain Districts Radio Club will be releasing a Helium Balloon from the Vermont South Shopping Centre Car Park, Burwood Highway Vermont, Victoria.

The payload will be transmitting on 144.250 MHz FM at a power level of approximately 100 milliwatts The Balloon is expected to reach an altitude of approximately 20km before bursting. The payload should be able to be heard in VK2, VK3, VK5 and VK7. The EMDRC encourages as many people as possible to record the transmissions on tape or (preferably) by logging the packet data to disk. A program will be distributed to analyse the data and concatenate results from multiple sources.

Packet and voice telemetry, repeated once per minute, will send the following information:

1) Flight Time
2) Altitude
3) Internal and External Temperature
4) Background Radiation Count
5) Global Position (subject to GPS availability)

The voice and data transmission will repeat approximately once every minute.

When the payload returns to ground level the transmission power will increase to approximately 2 watts for 5 seconds every 60 seconds. This will aid in recovery of the payload once it reaches the ground. There is a $100 prize for the person who recovers the

payload.

NEWS BRIEFS

NEWS BRIEFS

Sydney Leads Again in Solar Energy

Researchers at the Centre for Photovoltaic Devices and Systems, at the University of NSW have produced the world's most efficient ultra-thin solar cell. The cell, which measures only 47 microns in thickness, has a efficency of 21.5%, very close to the theoretical maximum for photovoltaic cells, and beating the record of 17% set at the Australian National University last year. The ANU still has cause to be proud of its former record, as their solar cell was produced using materials costing only one-fifth of that used in the thin-film device. More? [Y]es, No or Continuous c

Sydney's two solar cell manufacturers, BP Solar at Brookvale, and Solarex at Villawood between them produce 7.5% of the world's solar cells.

--Sydney Morning Herald

Not long ago, there was talk of the "Good Times" e-mail virus, which supposedly could work its way onto your computer by the simple act of your reading the message. That turned out to be a hoax, but now a real "document virus" is in existence, so watch out.

Users of of Microsoft Word, version 6, should be aware of the "WinWord.Concept" macro virus, which is currently doing the rounds. It is real, because today's modern word processors can now embed executable commands (called macros) into the document structure. These commands can be executed just by opening the document to read it. Microsoft is reportedly embarassed that the virus made its way onto a CD-ROM they sent out to PC hardware manufacturers, to test their compatability with Windows 95.

The virus itself is relatively harmless - it just forces the "Save As" command to place files in your template directory. The real danger is that it will be used as a basis for developing more damaging document viruses in the future.

Fixes are now available on the World Wide Web, but it is also useful to hold down the left Shift key when loading a new document, as this prevents any macros from executing.

Web sites with the fix are http://www.teleport.com/1/2trend and http://www.ncsa.com/wordvir1.html

-- The Australian

GERMAN REPEATER HEADED TO SPACE

A new UHF FM voice repeater, called Safex Two, will soon be operational from earth orbit. The first section of the repeater was due to be carried to the Russian MIR space station by German Cosmonaut Thomas Reiter, DF4TR this week. Reiter has been stationed on MIR for the European Space Agency's EUROMIR 95 mission. The rest of the system will be carried to MIR in the course of several missions over the next few months.

The 70 cm space repeater, actually an FM transponder, was built by Thomas Kieselbach, DL2MDE. Initially it will be FM only with downlinks at 437.925, 437.950, and 437.975 MHz, and an uplinks in the lower part of the 435 MHz space communications subband. Safex Two will later be improved adding a 23 cm to 13 cm transponder, capable of broad bandwidth modes including fast scan ATV.

It's not known at this stage when the transponder will come on line. While you're waiting, however you can talk directly to DR4TR who will be on the air using the call sign DP0MIR on the normal 2 meter frequencies of Primary frequencies of 145.800, 145.550, and possibly 145.200 MHz. These frequencies were adopted as standard for MIR and SAREX shuttle activities at the IARU session of this year's AMSAT-UK Colloquium. QSLs for contacts with this mission will be handled via the usual German DARC QSL bureau.

--Extracted from a recent Amateur Radio Newsline bulletin

HURRICANE LUIS

The ARRL reported that Hurricane Luis has been marauding around the Carribean this week. As of 1800Z on 5 September, the center of the hurricane was 50 miles east of Saint-Martin. Luis was reduced to a Category Three storm, with sustained wind speeds of "only" 130mph with 9 to 12 foot storm surges, and extensive damage has been expected: large trees blown down; some structural damage to small buildings; mobile homes destroyed; serious coastal flooding; many small structures near coast destroyed by wind and waves; almost all small boats torn from moorings.

On-air monitoring at the ARRL HQ on 14.268 MHz indicated that Dominica suffered damage along its North coast: some roads damaged and trees down; minor damage to residences; power was out. Stations in St. Maarten report extensive damage along the waterfront at Simson Bay. No reports of deaths or injuries had been received by the net as of Tuesday.

The National Traffic System (NTS) Digital Net was preparing to handle Luis-related messages: net staff recommended that

messages addressed to affected areas be routed via N2JAW, W1FYR, KQ4ET, or WX4J.

The Hurricane Watch Net is active on or near 14.325 MHz, and is currently soliciting reports from stations in the affected areas. Amateurs are advised to monitor storm-related net frequencies, but to not transmit unless directed to do so by net control stations.

--ARRL Special Bulletin 49, dated 5 September

Magazine Roundup

Magazine Roundup

Here again is a summary of the local magazines, which in the author's opinion could be of interest to Amateurs. This week we discuss the September issues of the various magazines.

"Electronics Australia" has an editorial of interest to those who still value their genes; Neville VK2XV looks back to the early days of car radio; a serviceman reveals some of the tricks of the trade in fault-finding; old VU edge-style meters find a new lease of life as AGC meters; a family of low-cost sweep analysers, for audio and RF use and based upon a DDS chip, is introduced; a simple and effective low-voltage battery indicator is constructed, as are some more simple transistor circuits for the novice; vintage radio buffs can read more about the Hammarlund; and there is a story on the difficulties faced by local inventors.

"Silicon Chip" also has an editorial on RF hazards, but taking a different point of view; "gizmo-lovers" can build a keypad combination lock (just the thing for keeping the harmonics out of your shack), whilst ATV types can add that "Frankenstein" look by building a Jacob's Ladder; and vintage radio buffs can brush up on some simple faults.

"Amateur Radio" builds a simple but effective 80m direct conversion receiver; the theme is continued with a receiver convertor for 2m; the RD Contest address is printed, which will be of interest to those who could not decipher the supplied tape; a TRF receiver is described, along with a comparison of various transceivers allegedly handling 9600 bps packet radio; the famous "Z-match" is road-tested; some poems related to radio are published; and another audio circuit of use to repeater sponsors is described.

"Radio and Communications" shows how to eavesdrop upon the astronauts with a scanner; the famous G5RV antenna is extended to 160m and 6m; Bob Bell talks about air communications, and in particular how you can hear about bomb scares before the media does; the decline and fall of the CB empire is discussed; Field Day enthusiasts are reminded that the time to check your equipment is NOT just before the event; a list of radio-related resources available on the

Internet is published, although we hasten to point out that the Australian newsgroups mentioned therein are now obsolete; tropospheric ducting is described; and finally those who want to import their own equipment are shown that is may not be such a good idea after all.

Be listening next month for another summary of the local magazines.

-- Dave VK2KFU

WICEN News

WICEN News

This month, we have been notified of the following exercises: the big VRA Bike Ride, co-ordinated by David VK2KLX and Kevin VK2CKD, is next Sunday, followed by the Gosford Bike Ride, organised by Gosford Rotary Club in aid of the Camperdown Childrens Hospital on Sunday 24th September; this latter event requires up to six operators from Gosford to Woy Woy, from Adcock Park to Lions Park, from 1100 to 1200, and Andy VK2XRX is arranging communications. Also this month is the regular Hunter meeting, presided over by Pauline VK2GTB.

The Hunter region is running a Training Camp for anyone who is interested, not just WICEN members, on the weekend of 7-8th October, at Crangan Bay YMCA Hostel, Lake Macquarie. A location map will be sent to course participants. The cost is $42, and it includes accommodation in dormitory style huts (male and female), or you can sleep out if you like the open air. Separate male and female amenities and shower blocks (with power and hot water) are provided, all in the bush land on the shores of Lake Macquarie. Meals will be provided for Saturday lunch and dinner, and Sunday breakfast and lunch. Bring sleeping bag and pillow, toiletries and insect repellent, overalls and stout footwear (no joggers) for Sunday field exercise, radios for 80m through to 70 cm (if you have them) with antennas, compass, pen and paper etc. Bring your own drinks for evening relaxation. There will be lectures on map reading, critical incident stress, safety standards in power supplies and generators, and equipment needs. Sunday will be a field exercise incorporating map reading and message handling on multiple net. As places are limited get in early and reserve your place now, by contacting Pauline VK2GTB on (049) 49-8786, or Frank VK2XVJ at VK2KLW.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains each Monday at 8.30pm on 7175 simplex, Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, the State-wide HF net

each Wednesday at 8.30pm around 3610 kHz, Central Coast each Thursday at 8.30pm on the Wyong repeater 7125, and Sydney each Thursday at 9.30pm on the Chatswood repeater 7150/8275.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

Club News - Manly Warringah Radio Society

The MANLY WARRINGAH RADIO SOCIETY will be conducting a communications exercise next Sunday, in conjunction with the North Side Riding Club. The event takes place at St Ives Showground, starting at around midday.

The Society will provide emergency communications for a cross-country equestrian event. Last time, there were several emergency calls, with at least one competitor requiring hospital treatment, so rapid communications are essential. This is generally an easy exercise (compared to some WICEN operations!) and is a good introduction to emergency communications.

The Society needs to cover up to a dozen or so jumps, plus Start and Finish gates, and liaison with event organisers. If you can assist with this event, contact the Manly-Warringah Radio Society at its weekly club meeting this Wednesday, or call in on the local 2m repeater VK2RMB, on 146.875 MHz on Sunday morning.

The Manly-Warringah Radio Society meets every Wednesday at the Warringah Volunteer Services Centre, Kamber Road, Terry Hills, with business meetings on the second Wednesday, and lectures on the third Wednesday of each month. Doors open about 7:30pm and visitors are always welcome.

--Richard VK2SKY, MWRS Publicity Officer

Club News - Waverley Amateur Radio Society

WAVERLEY AMATEUR RADIO SOCIETY

THE NEXT MEETING OF THE WAVERLEY AMATEUR RADIO SOCIETY WILL BE HELD ON WEDNESDAY, SEPTEMBER THE 20TH AT 7:30 P.M. THE VENUE IS THE CLUB'S PREMISES IN VICKERY AVENUE (OFF NEW SOUTH HEAD ROAD), NEXT DOOR TO THE ROSE BAY R.S.L. CLUB. MEMBERS AND ANYONE ELSE INTERESTED IN AMATEUR RADIO ARE INVITED TO COME ALONG.

THE HIGHLIGHT OF THE EVENING WILL BE A LIVE DEMONSTRATION OF ALL ASPECTS OF "INTERNET" ACCESS GIVEN BY BEN BUXTON (VK2XUF). BEN IS CURRENTLY SETTING UP A HOME PAGE FOR THE SOCIETY ON THE WORLD WIDE WEB WHICH WILL HOLD DETAILS OF THE SOCIETY'S HISTORY AND MEMBERSHIP TOGETHER WITH A CALENDAR OF FORTHCOMING EVENTS AND TRAINING COURSES. "INTERNET" IS A VERY HOT TOPIC AT PRESENT, SO COME ALONG AND HAVE ALL YOUR QUESTIONS ANSWERED.

THE 75TH ANNIVERSARY DINNER HELD ON SEPTEMBER THE 2ND WAS ENJOYED BY ALL ATTENDING AND OF SPECIAL INTEREST WAS THE 21ST ANNIVERSARY

HISTORY WRITTEN IN 1940 THAT MICHAEL CORBIN (VK2YC) DISCOVERED AND READ OUT. MUCH OF ITS CONTENT WAS PREVIOUSLY UNKNOWN TO CURRENT MEMBERS, INCLUDING THE FACT THAT THE SOCIETY CARRIED OUT THE FIRST AUSTRALIAN T.V. TRANSMISSION IN 1933 USING BAIRD'S MECHANICAL SCANNING TECHNIQUE.

THE FIRST SATURDAY AFTERNOON OF EACH MONTH IS PROJECT TIME, AND THAT ON THE 7TH OCTOBER WILL BE DEVOTED TO FM828 CONVERSIONS. A NUMBER OF MEMBERS HAVE THESE RIGS THAT THEY WISH TO USE AND ERIC VAN DE WEYER (VK2KUR) HAS OFFERED TO ASSIST WITH THEIR ALIGNMENT.

--SIMON BUXTON - VK2EII - PUBLICITY OFFICER

Club News - Illawarra Amateur Radio Society

The Illawarra Amateur Radio Society will be holding its monthly meeting this coming Tuesday the 12th of September commencing 7.30pm at the SES Building Montague St North Wollongong.

Dale Hughes VK2DSH has come back in from the cold, and will be giving a talk with slides on his experience with the Antarctic Research team at the meeting. This promises to be an interesting evening so invite a friend.

The meeting will finish with the normal rag chew and cuppa. Visitors are always welcome.

submitted by Ken VK2KWG
Publicity Officer

Club News - Central Coast Amateur Radio Club

The Central Coast Amateur Radio Club September lecture will feature a presentation from the Australian Amateur Television Club by Paul VK2UPB and Mark VK2XOF. Paul and Mark will be outlining the current policies of the AATC and give an overview of the future goals and directions of the group.

The AATC has developed a large range of ATV projects. This lecture will give an opportunity to those who are interested in learning more the general subject and the AATC project.

The lecture will be held at the CCARC clubrooms, Dandaloo St. Kariong on Friday 15th September commencing at 8pm. Tea and coffee will be served. All members and visitors are most welcome.

submitted by Bob Fitzgerald VK2XRF Publicity Officer

Club News - VHF/UHF DX Group

VHF to UHF DX Group

The next VHF-UHF DX Group meeting is scheduled for Tuesday 19th September at Amateur Radio House, starting at 7.30 pm.

This meeting will be devoted to a session on the correct tuning-up and performance measurement of linear amplifiers. There is a lot more to tuning a linear than adjusting all controls for maximum suds and there are many useful measurements that can be made using simple test equipment available in the typical radio shack.

Possession is just as important to HF operators as VHF operators, co if you want to extract the best performance from the 21m linear come along.

The date again is Tuesday 19th September.

Don't forget, the Tuesday activity nights on 144 MHz, and the group's Sunday morning net on 146.5 MHz Fm starting at 11 am.

submitted by Michael Farrell VK2FLR on behalf of Richard Soulie VK2ARS

Club News - St George Amateur Radio Society

From the St George Amateur Radio Society

Members and other interested amateurs are advised that on Saturday the 23rd of September the society will be holding its annual Bill Shakespeare Auction.

The Auction will be held at the normal meeting venue, that is in the 1st Allawah Scout Hall corner of Bellevue Pde and Blakesley Rd, South Hurstville.

Equipment for the auction will be accepted between 10 and 11 am.

Viewing will be between 11 and 12noon.

Auction ot start at 12noon sharp.

Credit card facilities are expected to be available for those requiring this facility and the snack bar will be open during the course of the auction.

Inquiries regading any specific details are welcome, please phone Publicity Officer, Allan VK2XF at home on 533-1006.

de Allan VK2XF, Publicity Officer

>of not paying it, and then make him a tender offer in stock :-)
>

Tony,

What a wonderful post. It is most amazing that your "policeman"
skills allow you to judge the intent of my post without ever viewing
my web page.

My primary objective is to advance the art of signal processing
applied to weak signal processing. One way to motivate is to pit man
against machine. The human mind is currently able to extract
information from a weak Morse code signal better than the best
signal processing algorithms. I believe the weak signal challenge is
standing proof. I've enjoyed reading about the creative techniques
applied in an attempt to extract the call from the noise. Several
universities have taken the challenge as a class project.

My secondary objective is to introduce more hams to EME
operation. The new EME audio recordings on my web page are
intended to show the quality of signals received from medium and
small stations.

I have received hundreds of Email/Guestbook responses about
my "EME & Weak Signal Page". Yours is the first negative response.
I researched your 100+ posts in the various newsgroups during
the past 6 months to see if you had provided some measure of
technical or social contribution. I found just one bit of insight in
all those posts:

"I do agree that people should never use an inappropriate level of insult."

So in response, I'll leave you with your own reflective quote
about yourself:

"I regret to confess that I remain an unrecified fool."

Cheers de Mike, AF9Y

>There is a difference between taking credit for those things, and
actually doing them. He didn't really spend that much time at any of
those hobbies. He did allow others to publish their ideas. He is kind
of wishy-washy on the facts, but basically he did participate in noted
events, but was unable to become a regular of any of them. He probably
spent 2 hours puting up his NYC link on VHF he always talks about, but
then 45 years bragging about it. I just hate to think how many people
he got to write about their projects, who he never paid. If I was
going to write for 73, I'd demand that their offer be a post dated
check, or a timed deposit in any bank except one in MA or VT.
Otherwise I fear you will be only donating a gift.
>

Wayne Green has made an impact in a great many areas and continues to
do so which is lot more than can be said for this thread.

Damming with faint praise is hardly the stuff of worthwhile dialog ...

On the HF bands (especially) the use of the standard
ICAO phonetics is recommended. (Alpha, Bravo,
Charlie, Delta, Echo, etc.)

I think the use of "cute" phonetics is probably not
a big deal on UHF/VHF circuits, where folks use them
as a sort of "signature", but unfortunately this
spills over to international HF usage, where those
unfamiliar with the local idiom may be confused.

I need a schematic for an Advanced Computer Controls DVR-1. Inquiries to ACC about this particular item have gone unanswered, and I need to track down a problem. My manual does not contain the full schematic.

Any help or pointers is/are appreciated.

Thanks in advance.

: post these ads I mean announcements to rec.radio.swap??

If it's a ham related CD (you deleted the message so I can't tell) then I wouldn't call it spam. Besides rec.radio.swap is usally empty, so I doubt anybody reads it. (BTW I wish there was a real for-sale group, maybe even with the packet ads echoed to it.) The swapping seems to go on in .equipment. Lighten up a bit, and be thankful that the FCC hasn't regulated most commerce out of the picture here as on packet. This is a free country - let's keep it that way.

The question raised was related to commerical activity and not objectives ... A cursory examination of the homepage in question does in fact affirm that you are engaged in a commerical acitivity and therefore the $40.00 offer amounts to little more than advertising.

"Ad hominems most often arise immediately following the need to obfuscate ...". Marvin Gardens (1938)

Cheers

Eddie

PS: Actually my associates and I look forward to Mr. Gold's frequent and substantive contributions. They are a welcome relief from the chaff thrown up by those with hidden agendas ...

Wrong park. Crater Lake is a caldera. Aside from being a volcanic feature, which Yosemite Valley isn't, a caldera has no open side.

4653. Re: Is US ham license in Canada valid?

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-12 00:00:00 UTC
From: ggors@gpu.utcc.utoronto.ca
Message-ID: <DEt05L.Brz@gpu.utcc.utoronto.ca>
Source record: 238715

There is a special treaty between the US and Canada which recognizes each others' ham licenses, when held by a citizen of the originating country, as valid. It also specifies that you sign portable *after* your call.

There are limitations related to license class: essentially VHF-only licenses can operate VHF only. Call ARRL, RAC or FCC or DOC local offices for details.

Examples:

US ham in Ontario: K8HI/VE3

Canadian Ham in Ohio: VE3YV/W8

US citizen with Canadian license or Canadian citizen with US license: must operate in home country under license issued there.

e.g. When I mobile accross the Peace Bridge south, I start the QSO as VE3YV and finish as K8HI because I hold both licenses and *must* operate according to their representive rules, such as phone sub-bands in the US and 10 minute ID.

As for customs, as long as you carry your license and receipts for your radios, its not a problem - you're rarely asked anyway.

73 es GL, George VE3YV / K8HI

4654. XR0Y QSL information

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-12 00:00:00 UTC
From: pklein@news.seattleu.edu
Message-ID: <434gb6$mc@bach.seattleu.edu>
Source record: 238716

Does anyone know the location and QSL information for XR0Y? This station has been very active on several bands lately, generating huge pileups. I worked them the other day on 18 mHz CW.

Is XR0Y a Dxpedition, or just a commemorative station with a special Chilean prefix?

73,
Peter - KD7MW

4656. Re: How to auto patch on repeater

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-12 00:00:00 UTC
From: "Thomas C. J. Sefranek" <sefranek>
Message-ID: <434lsf$h44@news.iii.net>
Source record: 238718

Hey Bill!
Usually NEW Hams post their callsign, it's a mark of worth!
Congratulations!

Your best bet is to ask how on the very repeater your using.
We repeater builders/owners appreciate your support too!

The S-Com line has several options for auto-patch.
Mine, 145.41 Harvard, Ma. only requires you to identify,
your request to use the patch, press the phone number and end with a star.
The normal pound down works.

To labor the question... Ask on the repeater, support at least one too!

Tom

---------- Begin of the QRP Clubs List ----------

==========
THE QRP CLUBS LIST The QRP Clubs List
Version 1.00
September 08, 1995
Compiled by Richard Hieber, DL8MFQ/AA8CP.
Email: <sz0026@daphne.rrze.uni-erlangen.de>
Packet: [dl8mfq@db0sif.deu.eu]

~Subject: The contents:

This file contains information about the following QRP clubs:

o 9A-QRP Club
o Arbeitsgemeinschaft CW / Activity Group Telegraphy (AGCW-DL)
o QRP Club ARI
o QRP Amateur Radio Club International (QRP ARCI)
o Benelux-QRP Club
o Grupo-QRP do Brasil
o QRP Club of British Columbia (BC QRP)
o QRP Society of Central Pennsylvania (QSCP)
o Cleveland QRP Amateur Radio Club
o Colorado QRP Club (CQC)
o CW Operators QRP Club
o Durham Region QRP Club
o EA QRP Club
o G-QRP Club (G-QRP-C)
o GW QRP Club
o Italian QRP Club (I QRP)
o JARL QRP Club (JA-QRP)
o MFJ 90's Radio Club
o Michigan QRP Club (MI QRP, M-QRP)
o The QRP Club of New England (NE QRP)
o The QRP Club of Northern California (NorCal QRP)
o NorthEastern Illinois QRP Society (NEIQS)

o The NorthWest QRP Club (NW QRP)
o NorthTexas QRP Club (NorTex, NQC)
o OK QRP Club (from the Czech Republic)
o Oklahoma QRP Club (OK QRP)
o St. Louis QRP Society (SLQS)
o U-QRP Club
o WI QRP Club
o YO-QRP Club
o ZS-Algoa QRP Group

The ordering of this list is somewhat arbitrary though it tries to follow the alphabet :-) No weighing is intended.

Two list entries here are somewhat special:

- The "MFJ 90's Radio Club" is focussed on the MFJ 90xx series of QRP transceivers but not affiliated with the company. Rather than being a club it is more a newsletter and its readership.

- The "AGCW-DL" is not a QRP club but rather a CW club. It is in the list because of its strong QRP activites and because there is no dedicated German QRP club.

In addition to all that you'll also find information about defunct clubs and newsletters, ceased activities, 'unofficial' groups and a small paragraph about the world famous IQ (Internet QRP-L) Club ;-)

Spelling and punctuation tries to follow European standards.

~Subject: The format:

ABBR: Abbreviation
FULL: Full name
PRES: Club President
ADDR: Contact address for membership and info
SINC: In existance since ...
COST: Membership cost (yearly)
NEWS: Club newsletter, name and frequency
NUMB: Current membership numbers (approximately)
MEET: Regular meeting
QNET: QRP nets, 'on the air' meetings
PROJ: Previous and current projects
TEST: Contests, activity periods
AWRD: Awards
COMM: Comments

The NUMB entry is only meant to give a rough indication about how big the club is. The numbers given are not precise and cannot be. The number of active members is not equal to the last issued membership number - some former members are SK now or have left the club. A good indication of active membership numbers is the number of people that

subscribe to the club newsletter.

The PROJ entry isn't meant to be a listing of all the building projects that any club member has ever done. Rather it should list all the projects that were designed by a club member, were realized by several others and are available as a circuit diagram, kit or whatever. This entry shows you where household names like 'Epiphyte' or 'Sierra' originated.

Similar story with the TEST entry: It is not a list of activities the particular club *participates* in, but rather a list of activities that *originate* within the club. There is not space enough to give details. By supplying the name everybody can see that a special activity exists which will give him the starter to ask for more information.

I would also like to supply information about regular 'on the air' meetings of the clubs (entry QNET). If you know about such activities, please notify me; my address is at the end of this file.

Addresses in <brackets> are Internet email addresses; those in [brackets] are valid in the Amateur Packet Radio network.

~Subject: Defunct clubs and newsletters, ceased activities:
---

o QRP society of Great Britain (1949-1964?)
o Pacific Amateur Radio Group (PARG, ?)
o Illinois QRP Society (ILQRPS) (?)
o "K5FO QRP newsletter" (1994)
o "The Milliwatt" (1970-1975)
o EA8 QRP-DX Club

~Subject: 'Unofficial' groups:
---

o The DRAGONSLAYERS QRP Group

This is mainly a Dutch group of amateurs with guest members
from two other countries only. Dick Pascoe, G0BPS, is the only
British member. Three Germans are also members being a family,
husband, wife and son. There are no membership fees, no
magazine, no contests etc, just a group of friends. Membership
is by invitation only!

o Zuni Looper Mountain Expeditionary Force

This is a local gathering of QRP ARCI members in Southern
California, who operate Field Day with QRP; the name refers to
the particular part of the State or National Park they always
operate from (the Zuni Loop area of the park). They are well

known and admired for the *HUGE* wire antennas they erect.

o Maryland Milliwatt Club

The club was founded in 1992 by two members. Membership is by invitation only. Mailing Address: Maryland Milliwatt Club, 3052 Fairland Rd, Silver Spring, MD 20904.

o World QRP Federation (WQF)

The only thing I know is that Gus, G8PG is president. I suppose it's a kind of QRP cover organisation. Can anyone give more info on this?

o The WVQRP Commandos

o The LIMARC QRP Heavy Hitters
(LIMARC = Long Island Mobile Amateur Radio Club)

o Old Coots QRP Group

~Subject: Acknowledgments:

I was using the club list maintained by Bill Kelsey, N8ET, as a basis for this list. Much later when perusing the QRP-L archives I discovered that Chuck Adams, K5FO, had already compiled a list which contained clubs that I didn't know about. Additional information came from other contributions to QRP-L and from assorted printed material, most notably publications of the G-QRP Club. Thanks for very helpful contributions and corrections from (sorted by callsign):

provided that it remains complete and unmodified and reasonable
attempts are made to use the latest version.

The editor makes no guarantee as to the usefulness of the information
provided herein. The editor takes no responsibility for any damages
resulting from the information provided in this list. If you are in
doubt, please post a question to the QRP-L mailing list or ask your
local elmer :-)

~Subject: Update information:

I intend to make this list up to date and as complete as possible. For
this I need your help.

If you find outdated information or errors in this list, please let me
know. If you know of any QRP club that you feel should be in this
list, then let me know, too. The same applies if you have ideas on how
to improve this list. Since English is a second language to me, I'd
also be grateful for hints on mistakes with grammar or vocabulary.
Please note that I try to stick to European conventions in spelling
and punctuation 'cause this is what I learned in school.

For the most up-to-date copy of this list, send email to
<sz0026@daphne.rrze.uni-erlangen.de> or a packet radio message to
[dl8mfq@db0sif.deu.eu].

4659. When can I get away with not using a recipical license?

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-12 00:00:00 UTC
From: abraham@bnr.ca
Message-ID: <abraham-1209951508280001@47.250.65.16>
Source record: 238721

Hello all,

I was wondering, if I was in international water (in a private boat or plane) do I need to have a special license to operate my Ham radio equipment?

Also, are possibly other parts of the world wher I would not need a recepical license (north or south pole for example) ?

Also, if I (a civilian) were on a military station over seas, would I need a recipocal license to operate within the miitary base (if they allowed me) ?

I'm not planning any major trip in the near future, I am curios to know?

Thanks,

Peter C. Abraham

Hi there...

I(don't know whether this newsgroup (rec.radio.amateur.misc) is appropriate
but, a friend of mine who is a licensed amateur will be spending 4 months (October
to Feb. 1996) on the Antarctic continent, and has asked me to inquire on
news, whether anyone knows if there are any links into internet from the
Antarctic or surronding countries (Falkland Islands, South America or
South Africa), or if there is an internet host willing to offer a connection.

If anyone knows anything that might be helpful, please reply by email
to mgrundy@pavilion.co.uk, as I don't read news very often.

With thanks, Martin.

Now tune your HF rcvr to the maritime CW frequencies and listen to the
the daily shipboard medical traffic, and occasional distress traffic,
being passed, together with the 6-hourly worldwide WX observational
reports passed from ships to shore stations. The CW bands occure in
the 4,6,8,12,16,22 MHz maritime segments.

(Notice the pro-code folks only respond to rather than initiate articles?
It's always the anti-code folks who throw the first punch.)

I had a 22S at one time and really liked the rig until it started developing problems on the synthesizer board.

The number of channels can be increased by using the hi/low power switch to switch one of the diode lines. As I recall, the frequency programming is binary. Using the power switch will triple the number of channels you can select. I'll be glad to furnish the dope to anyone that wants it.

The main problem with that rig was the synthesizer board. It was one of those cheap brown phenolic boards that the manufacturers across the big pond like to use. The paths develop cracks after a period of time. I will always look at the circuit board material before I buy any rig from now on. Nothing beats a good epoxy/glass board. It was sad to see that even my old TS-520 has a phenolic board in it.

After repairing the 22S many times by soldering jumper wires across the cracked paths, the board finally got so bad I dropped the rig in a trash can and walked away.

My advice is to thoroughly test out any 22S before you buy it.

4670. XR0Y electronic "QSLs"

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-12 00:00:00 UTC
From: eckman@eos1.larc.nasa.gov
Message-ID: <433r3r$4ba@reznor.larc.nasa.gov>
Source record: 238732

I contacted the XR0Y Easter Island expedition yesterday on 17m and,
as promised in their WWW home page, received an e-mail confirmation
of the contact today. This is a very neat service and perhaps
a look into future for DXpeditions.
One of the fears that I've always had when contacting a relatively
weak DX station is whether they've copied my call correctly. Most
DXpeditions (the present one excepted) don't welcome duplicate
or "insurance" contacts. With the Easter Island operation, the
confirmation came by e-mail.
Obviously, this expedition was in a unique position with respect
to internet connectivity as they are physically near to a NASA
ground tracking station. Dxpeditions to remote areas won't be
able to connect very easily. Perhaps Phase 3D satellite communication
may help one day.
Anyway, my compliments to the XR0Y and XY0Z teams for the first
of what will hopefully be many future internet-augmented DXpeditions.

4671. [Brisbane, AU] Weather fax help

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-12 00:00:00 UTC
From: nh007@un.seqeb.gov.au
Message-ID: <DEsFLy.4Cn@un.seqeb.gov.au>
Source record: 238733

Hi. I am trying to help a yachtie friend of mine who wants to receive and display weather faxes.

He has a substantial Kenwood receiver which looks the part, and has built the 'Radfax Decoder' from 'Silicon Chip' magazine in about '89. Only trouble is ... it no work!

I have working experience of FSK decoders, and I am pretty sure his decoder is working (it has worked ok for someone else). The night we tried it, I couldn't hear anything that sounded like FSK, and the PC software was displaying 'snow'.

Questions:

1. The best antenna he can rig will be a wire from the crosstree on his mizzen mast to the top of his main mast, all of about 15 feet. Any suggestions as to how to make this work or improve on it? Will the bit from the base of the mizzen to the crosstree contribute anything?

2. Can anyone provide a schedule of (rf) frequencies, (af) centre frequencies, frequency shifts and baud rates so that (a) we can listen in the right times and places and (b) set up the radfax decoder properly?

3. Is the originator of the software still around? What is the current version release?

4. Is this still the best way to recieve weather charts?

All assistance greatfully appreciated. Kind regards,

==========

From: jlowman@netcom.com
Message-ID: <jlowmanDEtKEu.4x1@netcom.com>
Source record: 238628

I recently bought an Icom IC-3AT 220 MHz HT from a fellow club member. Apparently having bought it second-hand himself, he had no manual for it.

If anyone has the "Lost Manuals" book, is it in there?

If not, would someone be willing to copy his manual for me, for a fee, of course?

Thanks in advance,

Jim

4675. DR600 Owners

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-13 00:00:00 UTC
From: Thomas Martin <tmartin@teclink.net>
Message-ID: <435946$khm@felix.TECLink.net>
Source record: 238629

Has anyone had the problem I have had with my DR600. I am having trouble with the remote control functions using an HT. I have tried 2 HT's with the same results. It seems like a software bug to me. If so, someone else's shold do the same thing.

When I set memory channels on both bands and enable crossband repeat using D99 it works fine. When I change channels on VHF (ie: B03) and then turn on crossband again the memory channel still displays the previous memory channel but the frequency displays correctly. The memory channel displayed jumps from the correct one to the first one the rig was on when it was powered up.

Thanks for any help. The rig is under warranty and I can send it back. If it is a defective part I will send it but if it is just a bug in the software I can live with it.

Sure sounds like a one way auxillary control transmission to me. Might be restricted to 70cm and above. One thing for sure, it would fall under one way transmission rules I believe.

>
>I got a speeding ticket last week.....

If you were talking on your 2m rig, you probably desensed your radar detector and it didn't pick up his radar signal....Even if he simply "guessed" your speed, that's okay...radar is used only to verify what the officer observes visually....In court, the officer will simply say that he observed you driving in excess of the speed limit and upon observing the radar confirmed that your ground speed was 52 mph....

At least that is the way they are supposed to teach the officers...I know, I am a police radar instructor....

P.S. He had to measure your speed while you were moving towards you as the radar wont measure speeds of vehicles moving away from the patrol vehicle.

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
September 17th, 1995
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $2 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

!! RAIN or SHINE !! Have no fear of rain, a covered
tailgate area is available for all sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

FREE - NEW Macintosh HAM TEST SIMULATORS

Studying for a ham test and have access to an Mac?

Upgrade Fast! Simulate the test and get S T I M U L A T E D!

Scores of 90% or > even get applause!

The new Macintosh Ham Test Simulators are HERE (and there if you can FTP)!

o Novice Ham Test 5.0 SA.sea
o Technician Ham Test 5.0 SA.sea
o General Ham Test 5.0 SA.sea
o Advanced Ham Test 5.1 SA.sea
o Extra Ham Test 5.0 SA.sea

The latest version "5" feature:

HyperCard 2.3 as a stand-alone application (SA) eliminating
your need to have HyperCard. All you need is a Mac with 4
Meg of memory and version System 7 or greater.

Each version "5" Ham Test Simulator has the latest questions
as prepared by the Question Pool Committee.

Each version "5" Ham Test Simulator is FREE OF CHARGE and work the
same way as the originals did (written by Diana, KC1SP).

You may obtain a version "5" Ham Test Simulator by mailing me a *FORMATTED
disk (1 per test) and include a Self Addressed and Stamped disk mailer for
the return.

Each version "5" Ham Test Simulator is also bundled with a shareware CW
program called MacMorse 1.4 written by Doug, WB0EON.

Also included in the version "5" collection are text files that relate an
interesting variety of ideas about the best way to study CW and prepare
for tests.

Or warm your phone line and get JUST the tests:

America On Line - Macintosh Ham Radio Section

> What difference does it make. Why would you want to go around opening
> peoples garage doors for anyway?

Obviously you've never heard of criminals eh?

When you don't have to pay for it, there's all kinds of nifty stuff in
garages. Even more tempting, is with a lot of attached (meaning part of
the house) garages, some homeowners think that since the garage door is
closed, they don't have to lock the entry door to the house.

Now, inside the house, there are even MORE interesting things. In fact,
once inside the garage, there are usually enough tools available to open
the door to the house whether or not it is locked.

I lock my garage. I lock my tool boxes. I lock my doors. People will still
get ripped off, but if they can find easier targets than my place, they
usually will.

Our local HAM Club (OH6AD http://www.jyu.fi/~pjka/oh6ad/) is
interested in subscribing some European Ham Magazine. Reason for this
is our recent joining to European Union, that brought with it changes
in Tax and Customs fees that enable us to pay less, if we buy from
within EU.

So what I need is cooments about various publications and also
(IMPORTANT!!!) contact addresses (where to subscribe and ask for more
precise information).

Please reply via Email to: pjka@jyu.fi

Here is a message I received that speaks for itself:
Date: Mon, 11 Sep 1995 19:54:43 -0400
From: PTracy@aol.com
To: k1oik@ccsnet.com
Subject: It works, and glad it does.

Burt, I do hope you are the same Burt I used to exchange messages with about a year or more ago on the RIME network. Lucky for you, I'm not going to kiss you, but I do miss your posts. There are no BBS's in the Hartford CT area that carry the RIME network anymore.

I think I lost RIME access just before the last Boxborough, MA ham extravaganza. Boxborough, where we (and I do mean we, not the HAM we which means I or me) get to watch a bunch of geeky, foul smelling, unkempt misfits with their pants halfway down thier asses weighed down from too many handhelds with oversized battery packs, passing gas with every step and belching while aimlessly wandering through the flea market in what can only be described as a drug or booze induced stupor. Where else can one find so much entertainment for so little money?

Anyway, RIME or not, I am indeed happy to see your name and taglines again. Nice to know you are still around. My only other hope is that you don't think of me (or would that be 'us' on the radio) as the typical, boring ham. That's not me. Really. TTYL Burt.

I also have only had the problem once. Mine happened after I went for a long motorcycle ride and the
radio was stored in the luggage rack. I wrote it off as excessive vibration and after resetting it, the
problem never came back. I have had about a dozen err 1's though, and it is to sporadic to pin down
causes it to happen. I use mine on external power a lot and that does't seem to hurt it. Overall though
I am pleased with the rig, I hope they come out with a dual band soon. 73's and goog luck.

Source record: 238648

146.52 MHz is known in the U.S. as the National Simplex Calling Frequency, and is listed as such in the band plan of the ARRL Repeater Directory. Recently there has been a wide-area net camping out on 146.52 which justifies being on the Calling Frequency by pointing out there is nothing in FCC Part 97 saying that anyone owns any frequency, that by law they can use 146.52 for a net or anything else, that it's just a "gentleman's agreement" saying 146.52 is a national calling frequency. To what extent should we as amateur radio operators follow the "gentlemen's agreements"? I monitor 146.52 fairly often at home and always when I travel, using it as I believe it was intended, which is a Watering Hole along the radio spectrum. The net in question, by the way, tends to go on for hours on Saturday nights, and essentially encourages lids to act out with other lids. --Bill KB8USZ

4696. 1995 CQP announcement

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-13 00:00:00 UTC
From: jholly@cup.hp.com
Message-ID: <4370e5$4cs@hpax.cup.hp.com>
Source record: 238650

1995 California QSO Party (CQP)
Sponsored by the Northern California Contest Club

Begins: 1995 October 7, 1600 UTC Ends: 1995 October 8, 2200 UTC

OBJECT:
Stations outside of California work as many California stations in as many CA counties as possible. Stations in California work anyone.

EXCHANGE:
California stations send QSO number and county. Stations outside of California send QSO number and state, province, or country.

QSO POINTS:
Each complete non-duplicate Phone contact is worth 2 points. Each complete non-duplicate CW contact is worth 3 points. No partial contact credit. Duplicate contacts must be clearly identified in log.

MULTIPLIERS:
California stations count states (50) and Canadian provinces (VO/VE1-7 and VY1/VE8) for a possible total of 58. All others use California counties for a maximum of 58. CA stations on a county line may be claimed as a multiplier for any or all of the counties they give in their exchange. Number each multiplier as worked.

SCORE:
The total score is the total number of QSO points multiplied by the total number of multipliers (58 Maximum).

FREQUENCIES:
160, 80, 40, 20, 15, 10, 6, and 2 meters. WARC band contacts do not count. Suggest CW on 1805 and 40 kHz up from band edge. Phone on 1850, 3850, 7230, 14250, 21300, and 28450 kHz. Novices 10 kHz up from band edge and 28450. Try CW on the half hour. Try 160 meters at 0500 UTC, 80/75 meters at 0300 and 0700 UTC. Try 147.54 MHz at 2000, 0000, and 0400 UTC.

CLASS ENTRY:
Single-Operator, Multi-Single, Multi-Multi, California County Expedition, Mobile, and Novice/Tech. Single-Operator entries limited to 24 hours maximum; off times must be clearly marked in the log and be a minimum of 15 minutes. Multi-Operator entries may operate the full 30 hours. Multi-Single entries must work only one band/mode for at least 10 minutes before changing band or mode. Stations may be worked once on CW and once on Phone per band. Single-Operator and Multi-Single entries are allowed only one transmitted signal. All CW contacts must be made outside the Phone sub-bands except for 160 meters. MCW is not

permitted. All contacts must be simplex. California stations that change counties are considered to be a new station and may be contacted again for point and multiplier credit. California stations operating on a county line may be counted only as one QSO.

ENTRIES:
Entries must be submitted no later than 1995 November 15. Entries of 200 or more QSOs must include duplicate check lists.

Logs may be submitted via postal mail to: NCCC, c/o Ken Anderson, K6PU, Box 853, Pine Grove, CA 95665. Entries may be submitted in CT Version 8 or 9 format with .BIN, .SUM, and .ALL files on 5-1/4 or 3-1/2 inch diskettes (no 2.88-MB diskettes). Label each diskette with call, entry category, and county/state/province/country. Please include a hard-copy summary sheet. Logs may also be submitted electronically by e-mail in ASCII format to cqp-1995@kb.org.

A one-dollar donation to help defray costs of printing and postage is encouraged. For a CQP paperwork package containing log and summary sheets, county abbreviations, and contest records, send a business size SASE to the above address.

AWARDS:
Entries with 100 or more QSO's qualify for the special CQP T-shirt; please include your size (L/XL) and $8 if you qualify and would like this special award.

Certificates -- To top Single-Op entry in each CA county, state, province, country, and to stations with 100 or more QSOs.

Trophies -- To top three non CA Single-Op entries, top three CA Single Op, top CA Multi-Single, top CA Multi-Multi, top Single-Op and Multi-Op CA County expeditions, and to the Mobile (multi-county) Single-Op and Multi-Op with the most QSOs.

Special CQP Wine Award -- The top 20 CA and top 20 non-CA Single-Op operators will receive a personalized bottle of NCCC Private Reserve California Wine. Winners under the age of 21 will receive a non-alcoholic personalized award.

Special Awards -- To the CA and non-CA Single-Ops with the most CW QSOs, with the most Phone QSOs; to the top CA and non-CA Single-Op low power entries (200 watts or less output); to the top CA and non-CA Single-Op Novice/Technician entries; to the top scorer outside of the USA and Canada; and to the top club in California. (5 entries minimum. NCCC, SCCC, NCDXC, and SCDXC are ineligible.)

JH>all kinds of electronic equipment. It's really more than that. I had a
JH>lot of fun in High School back in the late 60's and yet I can't explain why
JH>it is fun It's a hobby within an education within a society. It's a
JH>bunch of people having fun till a big emergency happens. Then it's more
JH>than fun.
JH> What do you say when people ask you why?

With all the "connectivity" available to most people these days, the
non-hams often wonder about (and frown upon) our fascination with
antennas, towers and other peculiar little rituals. It's a legitimate
question. Why ham radio in an age of cell-phones, palmtop computers
and Internet??

For quite some time, I was dissappointed with the hobby as I felt there
was a collective lack of expertise in the more "exotic" communication
modes. Specifically, the integration of the computer into the radio.
This meaning high-speed packet network support (you supply time,
equipment AND money to keep it alive and well) as well as the exploration
of "newer" modulaton techniques such as spread-spectrum on 900 MHz
and up. I wanted a 100kbaud multimedia national packet network!
Around here, I found little or no interest in this stuff (TCP/IP, NOS, SSRF),
so I pulled the amateur radio plug.

However, I lately have felt that with all the internet hype and the dog-eat-
dog corporate rat race (pagers going off, cell-phones ringing, Email,
palmtop computers loaded with schedules, alarms and to-do lists),
it's good just to "unplug". A friendly chat on the radio helps. IRC (internet
relay chat) and even the bandwidth hogging Internet Phone don't fill the
need. Too much like CB. Too many varied interests. Few (if any) personal,
eye-to-eye contacts result.

Even (I cannot believe I'm saying this!) the CW "fanatics" may be right
that CW is the simplest form of RF in that YOU are operating with the
bare minimum and not relying excessively on "the machine". (I'll defer
debate on fabrication of your own transistors or tubes, still needed
by even the CW fans, for another time.)

As an analogy, you can buy a GPS (global positioning system) unit and
never get lost anywhere on the face of the Earth. Or, you can pick
up a compass, a map, a calculator (or even a slide rule!) and a book
on celestial navigation. With a little bit of study, you won't need the
damned GPS unit and might have a lot more fun. To be honest, I
did buy the GPS first. Recently, I had fun learning the "old" methods.

Amateur radio is a little bit like that. It's "simpler" and, IMO, more old-fashioned. BUT it's more YOUR abilities and knowledge that are tested, rather than those of the machine and/or "the network". Even if all you know is a bit about home-brew antennas and SWR measurement -- and know next to NOTHING about the RF modulation circuits -- you at least moved beyond "plug and play"! Apologies to all my fellow software engineers out there, but what will we build next?? A "plug and think" massively parallel neural network to replace/augment our brains?? Gee, with any luck, we won't have to expend any effort on anything!

It (station-to-station RF) also often works when and if all else fails. Computer networks and telecomm infrastructure require just that: infrastructure! Infrastructure fails in a major disaster such as hurricanes, earthquakes and power grid failures.

I have previously argued here that cell-phone base-stations are becomming more robust. Indeed, in Oklahoma, portable cell base-stations were erected on-site with a special exchange used only by the emergency crews. This eliminated the problem of the cell system already in place being overloaded with calls by the media and everyone else. I also expect LEOS (Low Earth Orbitting Satellites) to become a reality in about ten years. Everyone will have hand-held wireless connectivity. Not that this isn't a "good" thing.

But again, we are faced with "the machine" doing it all for us. While the telecomm infrastructure may (will?) eventually become almost indestructable (thanks to LEOS in the sky and redundant sub city block level "microcells" on Earth), there will always be a bit of nostalgia and FUN in doing it yourself and going from point A to point B with no corporate, money-hungry, third-party doing the work in between.

I guess that is ONE way to describe amatuer radio. It's about doing RF communication on your own and independently of the existing infrastructure. It's about learning and doing things which may require at least a LITTLE bit of time and study, rather than instant gratification. It may not be efficient and may not be able to in any way compete with commercial telecomm, but that is NOT it's goal.

Sounds like I'm getting old, doesn't it?? :-) Maybe this is how you start thinking once you've burned out. ;-))

[BTW, for all my old buddies out there, I'm still seldom on the air. No time to get back on with the move to the new house. Too darned busy planting grass seed and painting.]

One final REALLY analog thought...

We all talk about the "Internet commmunity". Some suspect it's all BS. While the amateur radio community is still friendlier, IMO, than the internet community, isn't the REAL community right there in your own neighborhood? Isn't it sad when you pursue any hobby to the exclusion of the personal friendships you can build right there in your own backyard?

OK. Enough philosophy for one day. :-))

F.A.R.E., The Family Amateur Radio Event takes place Saturday, September 16, at Rawhide Park in Scottsdale, Arizona. September 16 is also ARRL's Ham Awareness Day. FARE has a swapmeet beginning at 6:00am, and the pavilion open at 9:00am. FARE has much for children. Ronald McDonald puts on a show at 10:00am for the kids and kids at heart. There is face painting and a Moonwalk ride, too. And, there will be AMSAT, MARS, NTS, T'hunting, Packet, ATV, DSP, and so much more available to all for hands on use. Also at FARE, will be the famous "celebrity dunk tank." Yes, dunk your favorite ham! 12 local clubs sponsor the event and this is the 3rd annual. All are invited to attend.

Len Winkler, KB7LPW lenwink@indirect.com

>the station), there is even more confusion all around.

During the WAE SSB contest last week I tried this exact tactic,
after reaching near exasperation (i.e. repeating in standard phonetics
a dozen times). I think once or twice I tried this immediately
after standard phonetics came back completely scrambled.

In every case the variation made no improvement and I lean toward
agreeing that it was actually counterproductive. I scratched that
tactic off my list. But read on.

Then Hans Brakob <71111.260@CompuServe.COM> wrote:

>On the HF bands (especially) the use of the standard

I agree that one country's cute phonetics are another country's
indecipherable noise. No matter how much I hear it, "Q asS eLle" makes
my brain hiccup. And that's not cute, just foreign pronunciation
of letters.

On the other hand, sometimes standard phonetics just don't work.
I'm convinced "sierra" is a horrible choice for the ears in some
countries. If I had a nickel for every time I've repeated "Negative.
Kilo >>>>>SEE AIR AHH!!!!!<<<<<" to Europe and South America I could
buy a TS940. Another observation during WAE was the universal use
of "Sugar fifty" instead of "Sierra fifty" by the Slovenian
stations. I think they don't like "sierra" either.

A phenomenon I've noticed a few dozen times is my "KS" call
being turned into "KK" by spanish speaking amateurs. Perhaps there is
a spanish word near "sierra" that starts with a K such that in a noisy

setting the S gets turned into K? Many mysteries with these phonetics.

So as much as it pains me to go "cute", I'm considering abandoning
"sierra" and using "sugar" or perhaps "santiago" instead by default,
on purely pragmatic grounds.

I notice also that some DX contest stations send phonetic variations of their
callsign in their CQ calls. I wonder if they've learned to do this because
it improves communication? That is, for ears in some countries in a noisy
setting the listener can't "get" the standard phonetic no matter how familiar
they are with it in the clear and no matter how many times it is repeated?
Like me with "Elle" for "L". It's important to note that in this case all
the variations are repeated over and over, so it's not really the same
as the scenario Coen described.

Pete

I'm trying some new ideas in RFD and need some difficult-to-find
electronics...

selsyn/synchro pair, 60 cycle, 120vac.

sin/cos potentiometers, or sin/cos rom or eprom

A/D and D/A converter ICs, at least 7 lines of binary (128 count)

360deg (no stops) potentiometers, with tapering in at least 350deg
of the rotation

Also interested in used/broken/other misc direction-finding gear
you might have laying around the shack... (L-pers, SuperDFs, etc)
Any freq range OK, I'm trying to learn more than apply.
(although would like to see something for 10m OTHER THAN a loop)

THANKS!

Did you ever stop to think about the fact that maybe the reason these 'guys' are on phone every night is because they have no appreciation for CW ? How many CW contacts have you made ? I was very upset at trying to get my speed up to 20wpm to get an extra until I started using it. It took a few months to really get the hang of it, but once I did, I was hooked. 20wpm was still a challenge, but now it was a challenge I looked forward to, not one that I was cursing at.

Anyone who simply memorizes the alphabet and numbers can pass a 5wpm test. ANYONE. There is enough time in-between letters to repeat it in your mind and do the translation. 13wpm introduces the concept of 'hearing' characters, not translating. 20wpm steps into hearing 'words'.

I have been a VE for about 8 years. I have tested many candidates, and there is always one truth. Those who do not like code, do not pass the tests. I have yet to see in 8 years of testing, anyone who was disgusted with code pass a 13wpm or 20wpm test. It is not that they are any different from anyone else, except in attitude.

20wpm is very difficult, but it is not impossible. I would be willing to bet that if you put half of the enthusiasm into working CW as you did into making your first 2mFM contact, that you would soon have your extra (if that is really what you want, since you seem to despise extras so much).

Instead of complaining so much about it, why don't you just do it and put it behind you ?

: ...but how many of them know anything at all about
: digital communications. Very few, I would guess.

There is room in this hobby (and that is what it is) for interests in all types of communications. Digital communications is great and will probably expand more than most other areas in the next decade or two, but communications happen on many levels and will not soon push voice or sstv or pulse or (insert your favorite mode here) out of existence. It is great that you are interested in digital communications, but don't see your world as all there is. Look around, experiment, have fun. Try other modes, yes, try CW. It is not the terrible animal that you think it is.

You may even find out (like I did) that it can be interesting
and almost fun.

Did he actually use radar, or Vascar (which times you between marks on the road)? Sorta sounds like the latter. If he had radar on "standby" I suppose it might set your detector off once you got close. The timed Vascar readings are prone to many errors, especially when the officer is punching buttons from a moving car and trying to look at marks on the ground.

I once got a radar clocked ticket and fought it (thought it was too high a speed) on the basis that multiple antenna vibrations on my car could "fool" the radar gun into reading too high a speed. In the court parking lot I couldn't duplicate the feat by shaking the antennae, but *did* set the gun off with his own tuning fork calibrator from about 15-20 feet away...something they said was not possible. Result was the judge cut the excess speed on the record in half, and halved the fine. Good luck.

This may sound odd...but could it be your power lines outside the house?
Have they recently been repaired, or do you see damaged lines? I heard
that RFI could enter there (damaged power lines), and be passed along to
your television. Power lines evidently make great antennas when damaged.

They use Fred Lloyd's QRZ Callbook database and if your callsign
has a matching e-mail address (you can add one by going to
http://www.qrz.com and following the directions), then your XR0Y/XR0Z log
entry is e-mailed to you as they process the new logs.

: -Drew in Charlotte-

You think the "trash talkers" you listen to every night represent the majority of "coded" hams out there??? Your entire opinion of experienced ham operators is based upon a completely unsupportable assumtion. And who designated you, who's understanding of Amateur Radio is so obviously limited, as judge? And so what if someone doesn't know a keyboard from a typewriter or thinks "digital operation" is something performed by a proctologist? There are many ways to be a contributing member of the Amateur community without being a techno-wizard or keyboard-cowboy.

Your logic: "These old guys talk about stuff I find boring. Hey, they're Extras, they must have known code. Therfore, most of the hams who know code must be stupid OFs". Sorry, that's an "F".

There are some folks on here who have been arguing against code testing for some time now, and while I do not share their views, they at least are reasonably competent representatives of the "no-code" viewpoint. You, on the other hand, appear to be just another young know-it-all self-important twerp who believes that if something isn't important to him, it just isn't important.

If I was a proponent of codeless HF access, you would be an embarassment. Keep up the good work.

>Has anyone had the problem I have had with my DR600.

I had similar problems with my DR600. I described the problem in
detail via a long, laser-printed letter to ALINCO. I received a quick
handwritten scribble attributing it to operator error. They did NOT
state what my error was! Others in my area have also had problems
with the DR600 while in remote mode.

Basically, ALINCO will not admit to the problem.

If you don't need the remote functions (which I wanted), it's a decent
unit. The front panel looks like it was designed by a government
commitee, but that's adifferent story. ;-))

Of course then there was my old friend VE3COO, who would carry on a conversation with you in the shack, all the while carrying on a qso with someone on CW at something like 50 or 60 wpm. He took forever to get his advanced (The CDN version), like why would anyone need voice???

CW - lower bandwidth, higher s/n ratio etc..... does have its advantages.

I would like to say that I'm still current, but I will say that 22 years after having given up working the traffic nets, I can still copy close to 20 wpm. I just have the most terrible time sending those 6s.

(It would help if the auto pilot would stop trying to send VE3GHO - a call that I havn't held in over 20 years!) 8-)

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 13/2330Z SEPTEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 13 SEPTEMBER AND FORECAST FOR 14 SEPTEMBER - 16 SEPTEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 69/3

GOES satellite data for 12 Sep
Daily Proton Fluence >1 MeV: 1.8E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 6.4E+08 (high)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
14 Sep 15 Sep 16 Sep
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 14 Sep: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: mostly unsettled, with brief active
period 09-12UT.

Estimated Indices : A K Observed A Index 12 Sep
Learmonth 14 3334 3322
Fredericksburg 17 14
Planetary 18 12

Observed Kp for 12 Sep: 3423 2234
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
14 Sep 20 Unsettled, with possible active periods.
15 Sep 18 Unsettled, with possible active periods.
16 Sep 15 Unsettled, with possible active periods.
COMMENT: IPS Geomagnetic Warning 22 was issued on 13 September and is
current for interval 15-16 September.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
13 Sep normal normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
14 Sep normal normal normal-fair
15 Sep normal-fair normal-fair fair
16 Sep normal-fair normal-fair fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
13 Sep 6 near predicted monthly values, with regular spread F
during local night.

Predicted Monthly T index for September: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
14 Sep 5 Near predicted monthly values
15 Sep 5 Near predicted monthly values
16 Sep 0 Near to 10% below predicted monthly values.
COMMENT: IPS HF Communications Warning 23 was issued on 13 September
and is current for interval 15-16 September.
Observed MUFs at:
Darwin: 15-30% above predicted monthly values 02-04UT, 15-30% below
09-14UT, and near predicted monthly values otherwise.
Townsville: near predicted monthly values.
Hobart: near to 10% below predicted monthly values.

4715. FT-51R battery monitor during Xmit

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-13 00:00:00 UTC
From: tlewis@dfw.net
Message-ID: <437sdv$hrd@dfw.net>
Source record: 238669

Subject: Monitoring battery voltage during transmit - Yaesu FT-51R.

A while back, there were several messages on Internet indicating problems with monitoring the battery voltage while transmitting. Today, I had a very enjoyable conversation with one of the Yaesu Technicians in California and discovered you CAN monitor the battery voltage while transmitting.

Step 1 Be sure both bands are selected "ON" (frequencies displayed on both sides).

Step 2 Select desired band and frequency to transmit.

Step 3 Push the Sub-Op button once (three tones will be heard and the Main Channel indicator will flash on the non-transmit band).

Step 4 Push the function button.

Step 5 Within 5 seconds - push the SET/0 key.

Step 6 Select BATTERY VOLTAGE (function 25).

You are now able to monitor the battery voltage while transmitting :)

Note:

Battery voltage will be displayed while transmitting and receiving.

Transmit and receive frequencies will not be displayed.

The BATTERY VOLTAGE message will scroll across the display.

To exit battery monitor during transmit, simply press the SET/0 key.

73!

>radar wont measure speeds of vehicles moving away from the patrol vehicle.

Bzzzzzt. Wrong.

Actually, a false generalization. So-called "moving radar" has this
limitation, but the hand-held guns, for example, do not have this peculiarity.

I know, I'm a ham operator.

One could switch to 17 meters, or 40 meters, or even 160 meters.
Few amateurs have an actual time critical need to work a particular
station at a particular location at a particular time. Most are content
to talk to someone else, anyone else, or to talk to a particular person
at a different time. Those who do have those time critical needs are
typically net operators, or Dxers. Now Dxers already illustrate my
point. They drive other operators to other bands *now* when they burn
holes in the spectrum with their pileups. They'd just be driving *more*
operators to alternate bands if there were more HF operators. As for
net operators, alternates such as digital networks, or moving to that
alternate 20 meters, a Phase III satellite transponder, are options
open to many of them. The rest will just have new recruits in their
daily jamming contest with K1MAN.

The only person that might be adversely impacted would be old
Joe out in Washington state who keeps a 20 meter sked with old Bill
down in the Florida rest home every day so they can compare their
latest medical problems. He'll be hurt, and that's a shame. But
if they can stay awake a while later, they can use 40 or 75 meters
for their daily talks. Of course Sprint could meet their needs at
10 cents a minute, which would be less than the amortized cost of
their equipment for the remainder of their lives, but that's hard
headed economics and not nostalgic magic of radio talking. (I
could suggest they could just listen to old tapes of their
conversations since new elements rarely intrude, but that would
be unkind.)

>You also decry the methods and attitudes of American DX'ers and
>contesters for having what you perceive as a terrible negative

>effect on international goodwill. It seems that increasing the US HF
>ham population a factor of 3 or 4 would make that condition many times
>worse. But then I suppose the foreign hams could just move down to
>the Morse sub-bands to escape the din...since at least THEY would
>still have the technical ability and operator skill to do so.

First of all, what makes you think all the new amateurs will be rabid Dxers? My hope would be that most of them wouldn't be paper chasers. And second, I don't buy into the idea that generating Morse requires any particular technical ability beyond that needed to generate any other RF emission. In fact I'd suggest the reverse would be true to a slight extent. Morse operators may need more wetware conditioning to operate their mode, but that has nothing to do with technical ability. And I'd note that the foreign phone subbands are offset from the US phone subbands *now*, so that they can escape some of the hounding. That wouldn't change.

>
>Michael R. W0KIE

No, calling a pager access number via autopatch isn't a one way
transmission. The pager access system responds with prompts, so
the communications is two way, and, of course, third party since
it is via an amateur repeater station. The party doesn't have to
be a human being. This is no different than sending 3rd party
traffic via an APLINK semi-auto BBS as far as one-way transmission
is concerned, and that's even allowed on HF.

It may be inappropriate business use, depending on the purpose of
the page, but it is no different in principle from any other autopatch
call. The amateur part of the system, the only part covered by Part 97,
is just an access to the public telephone network. Whether a person,
an answering machine, or a pager access computer answers the phone
doesn't make any difference. In fact, if the phone network gives
a busy, it's still third party traffic, and not a one way transmission,
because there *is* a response and information is passed.

>
>P.S. He had to measure your speed while you were moving towards you as the
>radar wont measure speeds of vehicles moving away from the patrol vehicle.

How would it know? Suppose the patrol car is moving at 25 MPH, and
the target vehicle is moving away from the patrol vehicle at 55 MPH,
wouldn't the radar indicate a relative speed of 30 MPH for the target?
Or if it attempts to calculate ground speed, wouldn't it claim a speed
of 5 MPH for the target vehicle? That's assuming the radar is setup
to only calculate the approach vector. Some units that I've seen have
a "toward/away" switch that allows ground speed calculations in either
situation.

As far as I know, and that's based on older radar units I own, the
receiver can't distinguish whether the return is dopplered up or
down from the transmitted signal. Only the difference in frequency
is available for the speed calculation. So, how would it know?

Oh, and as PS, police have been known to lock in a speed on their
units, and leave it that way all day, writing ticket after ticket
on the same reading. They've also been known to wave a speed gun
past a building with lots of fluorescent lights (like a supermarket)
and get the speed they want locked into the gun, from reflections
from the mercury vapor fluctuations in the 60 Hz field. They can
then use that to write a ticket.

You want your lawyer to check the tickets written by the officer
around the time you were ticketed to look for suspicious patterns
in the readings. You also want to check when the unit was calibrated.
Both of these should be parts of the discovery process prior to
trial, as well as a test of the suspect unit's calibration done
with your 2 meter transmitter active.

And you *should* have asked the officer to do a field calibration
in your presence when he stopped you. If nothing else, that prevents
him from using the locked in reading on another poor sucker later
in the day. In this State, you have the option of surrendering your
license to the officer in lieu of bond, or requiring him to escort
you back to the courthouse where you post cash bond. I always do
the latter since it takes the officer off the road for at least
an hour, and screws up their revenue enhancement effort.

>speed test is a "necessary" skill for HF access any longer. The FCC

What exactly is "necessary" in this regard? CBers manage to use HF frequencies with no test at all. As with hams, some do lousy operation with lousy equipment, and some do great operation with fantastic rigs, antennas, etc.

What's "necessary" about my knowing about EME or satellite operations for me to QSY from 14.178 to 14.153?

Going back 50 years, what was so necessary about knowing the difference between a Hartley and a Colpitts oscillator? Most hams may have _built_ their own gear back then, but probably very few did any _design_; most likely the majority worked from schematics and couldn't have cared less whether the oscillator was a Beepzap Frothslop circuit.

Hell, what's "necessary" about being able to write with a pen or pencil or crayon or whatever? Do away with the forms as well as the tests. We could make up our own callsigns and not have to deal with confusing 800 numbers to get on the air right away.

A friend of mine ordered the software upgrade for his repeater also.
We talked with the president of Link Communications, Inc. (the peole
who bought parts of ACC) while we down at Hamcon and he indicated that
the software was vaporware at this point.

He also indicated they were going to send a letter to the ACC repeater
owners telling them what their future plans will be. I don't recall more
of the details, but their e-mail address is linkcomm@netins.net.

4728. CATCC Press Release #2

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-13 00:00:00 UTC
From: steve.hajducek@bytewise.org
Message-ID: <127.8813.20@bytewise.org>
Source record: 238682

Subject: CAT Control Center (CATCC) Press Release #2
Date : 1995 - Wed. Sept. 13 20:27 Local/ Thur. Sept. 14 00:27 Zulu
From : Steve Hajducek, N2CKH

The response to monday's press release on CATCC has been truly overwhelming. I did not expect so many would read and reply so rapidly. Apparently the lack of really good (and inexpensive) CAT software is more of an issue that I had relized.

There were so many questionss that I will only answer a few key ones here:

Does your software exist or is it planned ?

CATCC does exist, it is currently in the final stages of beta testing by a number users.

Is CATCC a DOS or Windows program ?

CATCC been developed as an event driven MS-Windows application.

What radio does it support ?

The current baseline supports all current and most recent manufactur Yaesu F.F. cat radios and has been tested using the Yaesu FT-840, FT-890, FT-990, FT-1000 and FT-736R radios.

Does your program work with Kenwood radios ?

Sample programs to prove the Kenwood code have been written and tested on TS-440S/AT, TS450S/AT and TS-850S/AT radios to date, and is currently being integerated into the CATCC baseline.

Does CATCC support the FT-1000MP ?

I have no imformation on the brand new Yaesu FT-1000MP (or for that matter the new Kenwood TS-870S) however, unless there has been major changes or new control features added it should work just fine. Any added capabilities that the FT-1000MP may have over the bus will be integrated when I have the needed data.

Will CATCC support all Yaesu radios or is a separate program needed for each model ?

It was originally planned for CATCC versions for the various makes of radios to be created, one for Yaesu, another for Kenwood, etc., since the program so closely interfaces with the CAT transceiver. However, it has been decided to make one application for all radios. The first version of CATCC to be

released will support Yaesu and Kenwood. The user simply selects the model radio to be controlled. One H.F. radio and one VHF (or H.F. radio with transverter) can be controlled simultaneously.

How does logging work with your program, is it fully automated ?

There are two modes or logging, Full and Fast modes. With fast mode, all that need be done is grab the spot and click on Log. Fast mode however, is only usable when logging from a radio that provides all the required information. For VHF operations, Full logging must be used for most radios. In Full logging, what ever information can be read from the radio (if any) is and you fill in the rest. Full mode also allows the user to enter other information, such as QSL route or Grid Square, etc.

Does your program show every spot, like all the repeats that make another spot scroll off the screen before you can even use it ?

CATCC has two windows that pertain to the VHF packet dx-cluster. The main windows shows all activitity, while the spot window only shows the (1,000) most recent spots. An internal queue is also maintained on the last 30 new spots, no repeats will be placed in the spot window until it surpasses the last 30 unique new spots. A spot of N2CKH on 14195 and N2CKH on 14027 would both show up at the same time, but not if they are on the same frequency.

Your screen display shows hf and 6 meter spots, how does that work with the radios ?

If you have both an hf and vhf radio configured or two hf radios, one in use as the vhf with a transverter, than the vhf spot is sent tp the radio selected for vhf, either as the direct frequency or a 10 meter frequency for transverter use.

Does CATCC provide support for SWL operations ?

The CATCC software is designed for maximum control and operation of an Amateur Radio station. It was not designed to address the specific requirements on an SWL station. Another software project is in the works that addresses specific SWL requirements, it is not sheduled to appear until early 1996 however. It will provide support for all the Amateur transceivers with general coverage recieve (few don't these days) and the latest shortware receivers that have computer control support. Both a shareware/trial and full commercial version will be avaialable.

As previously announced:

The CATCCjr, the shareware/trial version of CATCC will become
available on September 28, 1995. It is NOT being made available
now.

What IS AVAILABLE NOW is the CATCC_PR.ZIP archive. CATCC_PR.ZIP
contains additional information on CATCC, including captured screen
displays in the form of .BMP files of the software in operation.
Also included are sample programs that WILL provide basic control
of both Yaesu and Kenwood CAT transceivers and a stand alone beta
version of the Accu-Rotor(tm) module.

The CATCC_PR.ZIP file is 921,295 bytes in size.

CATCC_PR.ZIP has been placed on the following ftp sites to date:

ftp.qrz.com
ftp.demon.co.uk

On or prior to September 28th, the CATCCjr software will be placed
on the ByteWise BBS and various FTP sites for downloading as
CATCCjr1.ZIP, CATCCjr2.ZIP, CATCCjr3.ZIP and CATCCjr4.ZIP. Each file
will be under 1MB in size (exact sizes will be posted). After the
files have been successfully transfered to all ftp sites, a message
listing all sites will be sent via e-mail.

Again, it must be stated that the CATCCjr version of CATCC is
basically a stripped down beta version of the full commercial version.
It is being made available to allow potential users of CATCC a method
to sample some of the latest features and comment on the software
during its final stages of production prior to purchase.

CATCCjr is NOT a supported product, it is not a complete product, it
is only a trial version. However, should it meet the users needs, it
can be used forever without any registration. However, CATCCjr will
remain the copyrighted property of N2CKH.

Unlike other CAT programs floating around, CATCC features full control
of a CATCC transceiver, NOT just frequency and mode control. Furthermore
it actually sets the frequency and mode correctly and by the way and
also reads information back from the CAT transceiver correctly too!

CATCC supports all bus commands that are meaningful, and does so
correctly. We support electronic tuning in a number or ways manually,
including clarifier adjustments (when supported). Filter selections on
the FT-990 and FT1000 and sub vfo operation on the FT-1000 is also
supported.

CATCC provides innovative features, some of which we will now briefly
describe as was requested by many e-mail messages.

AutoMode(tm) -

When enabled, will correctly select the default mode of the radio for the given frequency just tuned to in accordance with the ARRL band plan. Such that on 14000khz the rig would be set to CW, while on 14071khz RTTY would be selected and on 14096khz Packet and on 14196khz USB. For radios such as the FT-840 and FT-890, LSB would be selected in lieu of RTTY or Packet modes supported by the FT-990 and FT-1000.

AutoGrab(tm) -

When enabled, depending on modes of DX-Filer or All Spots, working in conjunction with AutoMode, as spots comes accross packet, your radio will follow the action, changing frequency and mode. This is fully hands off tuning operation. (NOTE: my beta testers love it, even though I thought of it, I just find it amusing.)

Band-Watch(tm) -

Allows the user to set one or more bands (1.8-1200Mhz) to be monitored for any DX Cluster spots and sounds audible alarm.

DX-Graph(tm) -

Graphically plots all DX-Cluster activity from 160 meters on up by a single band or range of bands. Provides various type of charts including Bar, Pie and Line.

DX-Filters(tm) -

Provides entry of up to 20 (seems reasonable number could be larger) DX prefixes or full callsigns to montior for and provide audbile alert when DX spot match is found. A user created default file is loaded at each program startup if it exists. The user can load a DX-Filter file, edit and save on the fly. If a DX-Filter file exists for the given date (created using DX-Calendar) it will be loaded instead of the default. Also, while the program is running, at Zulu day breaks, the system while check for a new file.

DX-Calendar(tm) -

Used to create and maintain DX-Filter files in advance. This is a pre-planning toll to ensure that you never miss that DX-Expedition again that you forgot about after reading in The DX Bulletin or else where.

DX-Sleuth(tm) -

To catch a the elusive rare one. This tool montiors cluster activity and notes every occurance of the particular callsign or prefix entered by date, time and frequency (mode determined by frequency). Then allows provides an analysis of this information to help determine a pattern that will predict the best day/time, frequency and mode to work'em.

Accu-Rotor(tm) -

Provides for automatic rotor control of a Hy-Gain DCU-1 rotor systeem. It provides for manual direct entry of 0-360 degrees, presets, bearing from Callsign/Prefix entry, Grid Square Entry or Latitude/Longitude entry. Optionally, when enabled, Accu-Rotor will automatically calculate the bearing and start rotation when a DX spot is selected from the spot window.

None of this really compares to seeing CATCC in action, although that requires waiting until September 28th for the release of CATCCjr, the captured screens in CATCC_PR.ZIP do provide a peek at the look of the software.

```
=========================================================================
| |
| Pricing for CATCC has been set at $49.95 U.S. (plus $10 U.S. |
| for the bound user's manual) plus 6% N.J. state sales tax (and |
| $7 U.S. shipping and handling within the U.S. and $15 all other |
| locations). All shipping within the U.S. will be by U.S. Priority |
| Mail. A tenative shipping date has been set for the first week of |
| November, 1995. Orders will be shipped in the order received, |
| payment in U.S. funds by U.S. bank check or U.S. Post Office |
| money orders. Cash will be accepted, however, cash orders are NOT |
| recommended, especially from overseas. |
| |
=========================================================================
```

I will continue to post information on the development of CATCC and its availability. Please forward all comments, suggestions and questions by e-mail.

>says...
>>
>>I got a speeding ticket last week.....
>
>...
>officer observes visually....In court, the officer will simply say that
>he observed you driving in excess of the speed limit and upon observing
>the radar confirmed that your ground speed was 52 mph....
>...

This statement, as far as it goes, (and this is no flame, Martin) is correct.
But to the defendants defense, I do not believe that many RADAR certified
police officers are aware of cosine error inherent in microwave devices. I am
curious: since Martin teaches RADAR, do you teach officers what this is and
what the effect will be on speed readings?

Of course, Stephen will go to court (or not as he sees fit) and his view of the
events will largely be ignored because he is not a sworn law enforcement
officer. But he currently doubts the validity of this speed reading (I
assume his honesty) but is also not aware of cosine error. So there may be
a plausible explanation for the RADAR reading simply being incorrect.

>P.S. He had to measure your speed while you were moving towards you as the
>radar wont measure speeds of vehicles moving away from the patrol vehicle.

Martin meant to clarify this statement and say that the officer had to measure
the target speed as the two vehicles were approaching one another
(both moving). It is true that when both vehicles are moving in the same
direction, RADAR cannot measure the absolute speed of the target vehicle.
RADAR will, however, measure the speed (relative to ground) of the vehicle in
which it is installed. (This is basic "clocking" using RADAR instead of the
calibrated speedometer -- but it counts as a "RADAR" citation.) Obviously,
RADAR works in any direction in which it's pointed if the equipped vehicle
is sitting still. Target approach vector is a factor.

Message-ID: <1995Sep14.141942.16359@ke4zv.atl.ga.us>
Source record: 238486

In article <abraham-12099515082800001@47.250.65.16> abraham@bnr.ca (Peter C. Abraham) writes:
> I was wondering, if I was in international water (in a private boat or >plane) do I need to have a special license to operate my Ham radio equipment?

In international waters, you operate with the authority and license of the nation in which the vessel is flagged. If you are in the territorial waters of some nation, you have to operate under their authority and licensing.

>Also, are possibly other parts of the world wher I would not need a >recepical license (north or south pole for example) ?

No. Even the poles have territorial claims. For example, at the US Base at the South Pole, you need a US license. There're also Norwegian, Chilean, Russian, etc claimant areas. In a non-claimant area, you fall under the same rules as a vessel in international waters.

>Also, if I (a civilian) were on a military station over seas, would >I need a recipocal license to operate within the miitary base (if they >allowed me) ?

Military bases aren't usually extra-territorial, but embassies are. On a foreign military base, you'd need a license for the country in which the base is located to operate amateur radio (though MARS is different). MARS operates under military authority rather than amateur authority. As I noted, embassies are extra-territorial, IE the same as the country they represent. So you could use a US license at a US Embassy, with the Ambassador's permission, but that usually isn't granted because the Embassy usually tries to respect local authority where it doesn't impact sovereign status, IE they'll tell you to get a license for the country where the embassy is located.

>
>Sure sounds like a one way auxillary control transmission to me. Might be
>restricted to 70cm and above. One thing for sure, it would fall under one
>way transmission rules I believe.
>

Not if it sent via an autopatch. That would be a two way communication
with another station (the repeater with the patch). An auxilary station
is a type of control point for a remote controlled amateur station and
would have nothing to do with a paging service accessed by the public
phone network.

It is legal to call a pager via an autopatch, just as much as it is legal
to place a regular phone call. There are the ususal restrictions on
content and an autopatch call to a pager would be third party traffic as
usual just as any other.

Of course repeater operators can decide what is acceptable and
unaccepatable on their systems and be more restrictive than the FCC. But
if they are telling you that calling a pager via the patch in general is
illegal - they are incorrect.

>
>Good Luck
>Avery

I have found it to be better than 50% reliable. NTS is no sure fire method of passing routine traffic anyway. The biggest problem with using the packet network is that the message will just show up as traffic on a packet BBS in the area of destination (based on state and zip) - it is then up to an operator to pick it up and service the message accordingly.

When I was active on packet I used it on a regular basis just to "exercise the system" and see if it would work. Most messages would get through.

I would also recommend checking the ARRL handbook on message formatting. I have some software (forgot what it is called) that will format them for you as DOS files which you can then upload as NTS messages to your BBS. It will even add instructions on how someone at the other end can handle it.

4739. Tower Physics help

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-14 00:00:00 UTC
From: Ken Florence <kenf@enter.net>
Message-ID: <4382p1$8kj@dns.enter.net>
Source record: 238538

Ok I tried the antenna newsgroup, now I'll try a wider exposure one. I hv a Rohn HDBX 48 tower (48'long) which weighs in at 400Lbs. It is installed on a tilt base. 10' behind the tower base is a steel beam (10' high) set in concrete and guyed to anchors set in concrete. I want to be able to raise this thing with a winch. The tower rests on a septic sand mound and the tip of it is 10'above the tower base. Lets assume that the weight is evenly distributed along the tower. SO if I attach a cable at the mid point of the tower, run it thru a pulley on the I beam, to a winch installed on the tower base, what kind of force will be exherted to raise this thing. How can I figure what the optimum point is to attach the cable to? Wud the force be significantly lower if the I beam was 20' tall? Yes I know abt mechanical advantage, but I want to know what wud go on in a singlr cable. Come on all u structural engineers out there, give me a hand!!!! ANy help is muchly appreciated. 73 and CUL de Ken

I said: "I have a VIC 20 I want to trade for a IC-781" (how long do we have read thesre messages where some ham wants to trade his junk for something woth something).

From: KH2KQ@KA6EYH.#NOCAL.CA.USA.NOAM
To : K1OIK@KQ1K.MA.USA.NA

Hello Burt,

You actually got one of those VIC-20's you wanna trade?

I do not have a Icom 781, but I does have a Kenwood 950SDX - howsa bout dat?

Only problem is dat it am attached under the counter of a 36 foot motorhome. So if youse trade for da 950 youse gotta take the motorhome too. Its got a generator and only 123 actual miles. But the problem der is dat it am havin a dead battery and it can't start and it is in the driveway of my vacation home at the beach in Malibu - so youse also gotta take the house in Malibu if youse want the 950SDX.

Howsomever, there is a beach bunny and her girlfriend that said they would just die if I sold the Malibu house on the beach, so they come with the house and the motorhome and the radio.

If dat am OK, then weese got a deal!

Oh yeah, does the VIC-20 got a DC power supply with it?

By the by, if you hear of anyone who has a Kenwood TS-50 attached to a Mercedes 450SLC - I would like to trade a Radio Shack 202 for it!!!!!!!

Poly Paks was great! Back when I was a poor, poor college student, they were *the* source for parts that would otherwise be too expensive for me to buy.

I bought my first microprocessor from them - an 8008 for $15 (later returned it for credit - I couldn't afford all the other parts needed to make it go!). Besides the required bag o' resistors, I remember their huge bag of 100 red LEDs for $10. They ALL worked, and most were bright. Regular LEDs were at least $0.25 or more at the time, so this was quite a deal. I made an LED bargraph with an LM 3914 that I boght from them, and later wired up 64 of them to make an LED oscilloscope (they were all the rage in the late 70's). I still have the LED 'scope, and some loose LEDs lying about.
I also experimented with running a few LEDs at high voltages (15V) and currents by placing them in a beaker of dry ice and isopropyl alcohol. It made a *very* bright red flashlight.

My roommate and I bought two Poly Paks stereos in one of their 1 cent sales (two items for the price of one + 1 cent) and they worked great! Another great Poly Paks buy was a bag of National Semiconductor COPS micros. I had a Nat Semi data book, and wired up a generic COPS circuit to test the parts. It turned out that most of them had been programmed as one of the fairly fancy scientific calculators that had been described in the data book. This was quite a find, because I needed a good scientific calculator for school, and most were selling for around $100. I pulled out a Poly Paks keypad (with more than enough keys) a Poly Paks 10 digit LED display and some assorted bits and within a couple of days I had an ugly but functional scientific calculator. I still have a tube of them, somewhere.

It was shortly after this that Poly Paks went out of business. Too bad, because they were unique. I still have a Poly Paks credit check that I never cashed (about $2 worth).

Another way to hear Europeans is great if you have a big-dish type satellite receiver. Several Europeans uplink their signal for relay via unencrypted audio subcarrier. I've been curious to check the over-the-air signal against this studio-quality standard as received on HF/MF, but I've never done it. That would be an interesting way to check your receive system against the standard.

Message-ID: <4399j3$mt5@erinews.ericsson.se>
Source record: 238543

Text follows in english...

Anuncio: El RadioClub de la Universidad de Alcala, (EA4RKU)
ha creado una nueva lista de distribucion de mensajes electronico
(e-mail) dirigida a radioaficionados espaoles, y en idioma espaol.

Si te quieres subscribir a la lista, manda un mensaje a:

listserv@rcua.alcala.es

incluyendo en el cuerpo del mensaje (no en el titulo) la
siguiente linea:

add Tu_nombre ham-ea

Si quieres obtener informacion sobre los comandos que acepta
la lista, envia un mensaje a listserv@rcua.alcala.es
incluyendo en el cuerpo del mensaje la siguiente linea:

help

Una vez suscrito, si deseas mandar un mensaje a la lista,
deberas direccionalro a:

ham-ea@rcua.alcala.es

Suscribiendote a la lista, tienes la oportunidad de utilizar
un canal rapido de comunicacion entre todos los radioaficionados
espaoles, donde podras discutir temas espaoles de
radioaficionados.

--

Translation into english:

Announce: The University of Alcala, Amateur Radio Club (EA4RKU),
has created a new spanish ham distribution e-mail list. The list
is intended for spanish hams, and in spanish language.

I you want to subscribe to the list, you must send an e-mail to:

listserv@rcua.alcala.es

You must include in the body of the message (not in the subject)
the following line:

add Your_name ham-ea

If you want to get the more information about the commands accepted
by the listserv, you must send an e-mail messge to listserv@rcua.alcala.es

including in the body of the message the following line:

help

Once you are subscribed, if you want to send a message to the
list, you must direct it to:

ham-ea@rcua.alcala.es

By subscribing to the list, you have a chance to use a fast way
for communicating with other spanish ham people, where you can
discuss ham spanish questions.

Gee, why have parking test on drivers' license exams if I am never going to park on the street? Why should I know about hand signals if I am never going to use them. Doesn't everyone have turnsignals? I mean it was necessary to know hand signals years ago, but why do I need to know them now?

These code arguments sound like my kids always asking me why they need to know Spanish, Algebra, Geometry, etc. They always say "we will NEVER use it. In fact they argue that they don't need to know how to

add and multiply anymore since we have calculators.

"Yeah dad, you needed to know it because they did not have calculators when you went to school, but why do I need to know multiplcations tables when I can just punch it into the calculator?"

Like everything else, it is the dumbing down of American and people not wanting to work for anything.

Regards,

Duffy - WB8NUT

I am a Paramedic and am looking for a portable radio for personal use.
It must be programmable transmit/receive for frequencies that I am
interested in(police, fire, ems, hospital). These are all VHF freqs and
must be able to handle programming of PL's for each freq. I would like
at least 30 channels that can be scanned.

I have seen a very nice Kenwood that someone told me was around $700.
Any recommendations? Please email me if you don't mind. Thanks...

For the General Radiotelephone Operator License (GROL) and Marine Radio Operator Permit (MROP), the question pools can be found in 'General Radiotelephone Operator License' by Fred Maia W5YI and Gordon West WB6NOA, available at any Radio Shack.

This book also contains general information concerning all other commercial radio licenses issued by the FCC, and should answer most if not all your questions.

You need not be a US citizen to obtain these licenses, but you must either a resident alien or else legally employable in the US.

Question pools for other classes of commercial license are available from National Radio Examiners, a branch of Maia's W5YI Group. The address is:

National Radio Examiners
PO Box 565206
Dallas TX 75356-5206
voice: 800.669.9594, 817.461.6443
fax: 817.548.9594

Note that commercial question pools are about to change. NRE should have the scheduled changes by now.

If you have any further questions, e-mail me and I'll do what I can to help, including some useful tips on passing the tests. I hold T-2, GROL, GMDSS/M/O, Radar Endorsement, and am a commercial and volunteer amateur examiner.

This is Link Communications, Inc. When ACC quit doing business
recently, we agreed to continue to make their manuals and eprom files
available to their customers. We are also trying to obtain repair parts
for their controllers, but many of the parts have been discontinued.
We how posted their eprom files on our ftp site (ftp.netins.net in
directory showcase/linkcomm/acc). These eproms are the last version
that was finished, not Version 6 which was never completed. We may
eventually release an update to Version 5.2, something between 5.2 and
what Version 6 was supposed to be. We are currently trying to obtain
the chips and/or circuit boards needed to distribute Version 5.2 or any
future updates. The manuals are available only in printed form.

We wish to support ACC's customers by providing manuals, software
updates, and some repair parts, although that is going to be a losing
battle. We are not currently providing technical support, but we might
in the future. We are also trying to provide an upgrade path for those
that with to replace their ACC controllers. We currently have five
different controller models, with a wide range of features and prices.
For information on our controllers or updates for ACC controllers,
please email, call or fax us. We will be glad to mail or fax our
product information (it is not formatted for email).

>talking about having 1000 watts "DC OUTPUT" from their linear amplifier.
>If it was REALLY only DC output, no one would hear them!

Now Brian, don't be so harsh. The T in the RST system reads as follows:

1 - 60-cycle AC or less, very rough and broad.
2 - Very rough AC, very harsh and broad.
3 - Rough AC tone, rectified buy filtered.
4 - Rough note, some trace of filtering.
5 - Filtered rectified AC but strongly ripple modulated.
6 - Filtered tone, definite trace of ripple modulation.
7 - Near pure tone, trace of ripple modulation.
8 - Near perfect tone, slight trace of modulation.
9 - Perfect tone, no trace of ripple or modulation of any kind.

Note that Craig set off the "DC tone" with "". Lack of AC
could be phrased as a "DC" note. We would all know what
the speaker meant.

My tone on 500 kHz CW was always 1. I kept the xmtr in the A2 mode.
Pretty sounding tones several kHz either side of the channel! 10 kW
A2 sure got everyone's attention in the Pacific.

simon twigger (simont@post.its.mcw.edu) wrote:
: Hi there,

: I have seen people mention various commercial radio licences both on this newsgroup
: and in various othere sources and I was wondering if anyone out there
: could provide me with a bit more information. Principally, what are
: they required for, why would I need a commercial radio licence and
: what would I be able to do if I had one?

A lot has changed, due to FCC deregulation over the years. I believe that they are still required (or at least a desirable qualification) for employment as an engineer at a TV or radio station. It used to be a requirement to have a (then) second-class commercial license to work on CB radios, but they cost so little now that it's a moot point. Like many other consumer electronic items, they are now a "throwaway" unit.

A friend from the local radio club is a radio repair technician for the Federal Government. I believe he would need a commercial license to qualify for his job.

: Also, what do they entail?
: I believe they are similar to the various Amateur tests in that they
: are multiple guess, but I would imagine they are slightly more involved
: than the Ham exams.

They are indeed similar to amateur tests in this regard. I've heard it said that it's not that much more difficult to pass a commercial application today if one already has an Extra class ham license.

: Is there somewhere I can find out more about these exams, and what
: the sylabus is (is there a question pool for these exams?). I would
: also be interested to hear how difficult they are and whether a suitable
: book exists that would enable me to 'teach myself' in a similar manner
: to the various books available for the amateur licence exams.

There is a published question pool for these exams. A study guide is about $20, as I recall. Amateur Electronics Supply has its headquarters store in Milwaukee; they should sell the study guides.

Hi Y'all.

I am wondering if there is any web pages utilising great circle
software where you can put in your location and a destination location
and get the bearing for facing that location??

Failing that What is the easiest widows or dos or Mac software for this
job and its location on the net??

Thanks

Graham

4764. Re: Is US ham license in Canada valid?

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-14 00:00:00 UTC
From: linville@freenet.edmonton.ab.ca
Message-ID: <43a14k$fju@news.sas.ab.ca>
Source record: 238563

An U.S. ticket is valid in Canada WITHOUT any notification to IC because Canada has a special treaty with the US about this. Poland is covered by a different agreement and maybe the Polish ham needs to show the SP licence to IC. The agreement with the US about ham radio is much the same as the agreement concerning Canadians not needing visas or passports to visit the US. This information is readily verified by letter to RAC Reciprocal Licencing Manager VE3FRS, Frederick St., RR3, Bracrebridge ON P1L 1X1. Please enclose an SASE.

This is going to require FCC type acceptance.
Part of type acceptance includes you not being able to reprogram the
frequencies.
At this point then, you will have to show proper authorization to
transmit on any/all of the various channels before the (FCC licensee
that will set up the frequencies) tech will set them.
Considering the usual intra-agency infighting, that should be quite
an accomplishment in itself.
Use your work issue HT on the channel(s) you're assigned, and buy
something cheap like the Kenwood TH-22 and modify it for out of band
(i.e., out of the amateur bands) operation and hope you don't get
hauled across the carpet too roughly the first time you use it.

Jeff

: There are limitations related to license class: essentially VHF-only licenses
: can operate VHF only. Call ARRL, RAC or FCC or DOC local offices for details.

Many ARRL publications get this wrong, however.

: Examples:

: US ham in Ontario: K8HI/VE3

: Canadian Ham in Ohio: VE3YV/W8

: US citizen with Canadian license or Canadian citizen with US license: must
: operate in home country under license issued there.

: e.g. When I mobile accross the Peace Bridge south, I start the QSO as VE3YV
: and finish as K8HI because I hold both licenses and *must* operate according to
: their representive rules, such as phone sub-bands in the US and 10 minute ID.

How do you obey the rules requiring you to ID at the end of a
transmission? Seems you have to ID at the border.

Actually, there's a weird hole in the US rules. A local fellow with
an Extra and a Canadian license usually uses the Canadian call. I
didn't think this was legal, until I stared at the rules. If you are
a Canadian and not an American, you can in fact use your Canadian
licence in the US, even if you hold a US license. The rule that
prohibits this applies only to reciprocal permit holders, and
Canadians don't need or get reciprocal permits. (97.107(a),
97.107(b)(4) - go ahead, look it up. It's very strange, and probably
unintended.) The privileges allowed under the two licenses can be
quite different. (Dual citizens, being US citizens, get no such
treaty privileges. Canada cannot claim protection of US citizens in
the US, even if they are also Canadian, so the treaty doesn't apply;
and US citizens are, by definition, not aliens, and therefore can't
get "alien operator privileges.")

Want Extra privs at 12 WPM? Try this:

1. Immigrate to Canada.

2. Get a full licence/operator's certificate. (Canadian residents are supposed to use a Canadian licence.)

3. Wait 3 years and get Canadian citizenship. (This step is not strictly necessary except to avoid statelessness.)

4. Renounce your US citizenship.

5. Immigrate to the US (it helps a lot to have a spouse who kept US citizenship - no quota).

Bingo! You can do anything an Extra can do, except 1) give exams and 2) use 420-430 MHz (and if you have/get a Technician license, you can even do that). Of course, you can't vote for President any more, but who cares?

(Dopey me, I did it the hard way. :-)

(Can't wait for the flames. USENET really is too much fun! Don't follow up with "it can't be because" this or that until you look at the rules CAREFULLY. Where you will see that it is.)

ARLX051 WRTC-96 makes plans

ZCZC AX21
QST de W1AW
Special Bulletin 51 ARLX051
From ARRL Headquarters
Newington CT September 14, 1995
To all radio amateurs

SB SPCL ARL ARLX051
ARLX051 WRTC-96 makes plans

The Northern California Contest Club (NCCC) has selected judges for the World Radiosport Team Championship (WRTC-96) competition, scheduled for July 13 and 14, 1996, in the San Francisco Bay area, and has announced the rules for the event.

According to NCCC President Ken Silverman, WM2C, since the WRTC competition takes place within the IARU HF World Championship, WRTC rules will follow suit as much as possible. Each of the 52 WRTC teams will compete as a two-person, multi-single contest entry, running a maximum of 100 watts output. WRTC competitors will be limited to 18 hours (from 1200 UTC Saturday to 0600 UTC Sunday), and will use only the 40, 20, 15 and 10 meter bands.

Lew Gordon, K4VX, will head WRTC-96's Judging Committee as chief judge. Additional judges will be Roger Western, G3SXW, ''Bear'' Kumagai, JA7RHJ, Fred Laun, K3ZO, Dick Frey, K4XU, Tom Taormina, K5RC, Glenn Rattmann, K6NA, Gene Walsh, N2AA, Dick Norton, N6AA, Phil Goetz, N6ZZ, Ville Hiilesmaa, OH2MM, Tine Brajnik, S50A, John Brosnahan, W0UN, and Rush Drake, W7RM.

The WRTC, first held in Seattle, Washington, in 1990, pits two-person teams comprised of some of the world's top operators in a head-to-head competition. To emphasize operator ability, each team runs the same transmitter power and operates from stations having similar antenna systems and located in the same geographical area.

For additional information about WRTC-96, contact Rusty Epps, W6OAT, at 651 Handley Trail, Redwood City, CA 94062, USA, or via e-mail to epps@netcom.com.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 14/2330Z SEPTEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 14 SEPTEMBER AND FORECAST FOR 15 SEPTEMBER - 17 SEPTEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 69/3

GOES satellite data for 13 Sep
Daily Proton Fluence >1 MeV: 2.4E+06
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 8.3E+08 (high)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
15 Sep 16 Sep 17 Sep
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 15 Sep: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 13 Sep
Learmonth 7 3112 2222
Fredericksburg 5 16
Planetary 10 19

Observed Kp for 13 Sep: 3445 3223
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
15 Sep 10 Quiet to unsettled
16 Sep 10 Quiet to unsettled
17 Sep 10 Quiet to unsettled
COMMENT: IPS Geomagnetic Warning 22 was issued on 13 September and is
current for interval 15-16 September.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
14 Sep normal fair-normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
15 Sep normal normal-fair normal-fair
16 Sep normal normal normal
17 Sep normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
14 Sep 1 near to 15% below predicted monthly values, with
spread F observed 16-21UT.

Predicted Monthly T index for September: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
15 Sep 5 Near to 10% below predicted monthly values.
16 Sep 5 Near to 10% below predicted monthly values.
17 Sep 10 Near predicted monthly values
COMMENT: IPS HF Communications Warning 23 was issued on 13 September
and is current for interval 15-16 September.
Observed MUFs at:
Darwin: near to 15% below predicted monthly values.
Townsville: near predicted monthly values.
Hobart: near to 15% below predicted monthly values.

SB DX ARL ARLD048
ARLD048 DX news

This week's bulletin was made possible with info provided by Joe, NJ1Q, Frank, AH0W/OH2LVG, Jari OH2BU/OH7RF, Chris, G4BUE, Johnny, LA5IIA, Roger, LA4GHA, and Contest Corral from QST. Thanks to all.

BENIN. LA-DX Group members LA9IY, LA4GHA and LA5IIA will be on the air September 16 to 26. The call sign expected to be used during this DXpedition is TY8G. Besides HF, OSCAR 13 mode B will be featured. For CW check 1827, 3515, 7015, 10115, 14005, 18075, 21005 24895 and 28005 kHz. On SSB try 1841, 3755, 7055, 14145, 18145, 21185, 24945 and 28455 kHz. RTTY will be mostly on 14085 kHz. Satellite operation will be on 145.895 MHz, listening up. QSL via LA8G, PO Box 5626, N-7002 Tveita, N-0617 Oslo, Norway.

MV ISLAND. After a three and a half year long hiatus, MV Island returns to the air with the help of ops OH1KAG, OH2BU, OH3KCB, OH3MEP, OH3MMF, RA3AUU, RU3FM, RV6HY and RA3AUM. The DXpedition will start September 21 through Monday the 25th and feature all-bands/modes, 4 stations, and 24 hours/day operating. Listen for the call signs R1MVI and OH2BU/MVI. An entry in the CQ WW RTTY Contest is planned. The team will use full size verticals on 160 and 80 meters. For CW check 1831, 3501, 7001, 10101, 14025, 18069, 21025, 24891 and 28025 kHz. On SSB try 1845, 3795, 7045, 14195, 14295, 18145, 21295, 24945 and 28495 kHz. RTTY should be on 14084, 18104, 21084 and 28084 kHz. QSL via OH2BU.

TUNISIA, 3V. YT1AD will sign 3V5A in both CQ SSB and CW Contests.

VIETNAM, 3W. Rolf, SM5MX, has returned to Hanoi and will be QRV as XV7SW again. QSLs for his previous operation are being processed and mailed. Fellow Swede Torsten, home call not supplied, is also QRV as XV7TH. And Franz, DF5GF, is licensed to operate only on 14016 and 14295 kHz as 3W6GM.

MADAGASCAR, 5R. Ben, 5R8DS reports that his XYL Marian, 5R8DY, has returned to the Netherlands, but he will be QRV until November 1 when his contract with Radio Netherlands ends.

MALDIVES, 8Q. JA0BYS and JA9PRJ will sign 8Q7BY and 8Q7RJ from September 26 to 30. QSL via home calls.

MALTA, 9H. 9H3BKS plans to be QRV October 21 and 22 with CW and SSB on all bands, including VHF and UHF. QSL via 9H1FG.

OMAN, A4. Tony, G4KLF, will sign A45ZN over the next two years. He will also operate from club station A47RS on CW, SSB, RTTY, AmTOR and packet. QSL via Tony Selmes, PO Box 981, Muscat, Sultanate of Oman.

FERNANDO DE NORONHA, PY0F. AH0W and WA7LNW are planning a multi-single entry in the SAC SSB Contest September 23 and 24.

EGYPT, SU. Mohamed, SU2MT, will be on the low bands this Fall and is looking for skeds on 160 meters.

MARSHALL ISLANDS, V7. V7/AL7EL plans to be active October 18 to 25 with an emphasis on the low and WARC bands. QSL via his home call.

FALKLAND ISLANDS, VP8. Mark, VP8CSA, aka ZB0T, will be QRV for 5 months. QSL via DL1SDN.

ASCENSION ISLAND, ZD8. Jim, N6TR will sign ZD8Z September 29 to October 8. Check 33 kHz up from the band edge for his CW, as well as 21150 kHz. QSL via VE3HO.

EASTER AND SyG ISLANDS. XR0Y and XR0Z have been very active. Remember that DXpedition members are collecting signal report data for propagation studies. Honest signal reports are requested. QSL both via WA3HUP.

AZORES, CU. Matthias, DL3KUD, will sign CU2/DL3KUD October 3 to 17 with an all band CW effort. QSL via DL3KUD.

SABLE ISLAND, CY0. VE1CBK and company will be QRV September 30 to October 10.

KERGUELEN ISLANDS, FT8X. Jean Jacques, FB1LYF, aka J28CW, will start a one year operation in November as FT5XL. He will operate all bands, CW, SSB, RTTY and RS-12. QSL via F5NZO.

THAILAND, HS. HS0AC is no longer in operation from the Bangkok Science Museum. The license has been transferred to the recently refurbished HS0A at the Asian Institute of Technology. Listen for HS50A in the CQ WW contests. Some Thai operators will sign HS7AS in these contests.

JAN MAYEN, JX. LA4CJA and LA3EX will sign JX4CJA and JX3EX September 28 through April 15. They will be on 80 through 10 meter CW and SSB.

JORDAN, JY. Bob, WB9YXY, will be active October 3 to 20 as JY8XY on CW and SSB. QSL via his home call.

QSL NEWS. The ARRL Outgoing QSL Service can now forward cards to Uganda, 5X, and Mali, TZ.

THIS WEEKEND ON THE RADIO. SHF enthusiasts will want to check out the ARRL 10-GHz Cumulative Contest. Event specifics are on page 113 in July QST. HF types can get in on the North American Sprint and Scandinavian Activity Day. For more info on these two events, see page 127 in September QST.

They'll be an excellent test of your skills. While they'll usually
work when constructed according to instructions, they'll rarely
work *right*. So you'll get great experience troubleshooting
and redesigning circuits.

They represent a convienent step above scrounging your own parts,
making your own circuit boards, and finding and drilling an enclosure.

>than fun.
> What do you say when people ask you why?

I see a VERY good analogy in fishing. Yes, FISHING!

Everyone understands fishing. Most people in Michigan know several fishermen. It's regarded as a good passtime.

Our radios and antennas are the rods and reels of our hobby. We enjoy getting away with them 'for a while' from time to time for a number of the same reasons that fishermen do.

Like fishermen, we may do it for relaxation or to snag that 'big one' that we've been trying to get for weeks. We may try to snag one or two of each kind for our trophy wall. We may be only interested in exotics that can be had only a few days a year or we may be satisfied with anything that tastes good.

Like fishermen, we may plan and scheme, measure and calculate to prepare for a session. Or we may just declare that "it's a fine day for it" and hope for the best.

A fisherman may spend tens of thousands of dollars on a specialized boat and state of the art equipment. He may spend as much to launch an expedition to some remote location where he can get fish by the hundreds. He may have simpler tastes and fish from a second hand boat using ten year old tackle that 'works just fine, thank you' or he may be satisfied to sit on the dock with his hand made bamboo pole and tin can of worms dug up that morning. He may get great pleasure from constructing intricate and delicate flys that are as much a pleasure to see as to use.

Some fishermen congregate in groups for the fellowship, indeed sometimes the fellowship may be of greater importance than the fish. Some fishermen just take their son to 'their favorite fishing hole'. Some just like to get away from the commotion of daily living and fish alone.

I know fishermen whose avocation was a large part of their decision where to buy a home. I know others who don't mind driving an hour or two to fish. Some, alas, no longer fish because the pressures of life

or economic hardship forced them to retire or even sell their gear.

There are some neighborhoods where a fishermans equipment (boat, boat house, winch, net racks...) are encouraged. Some neighborhoods may tolerate one small boat. Some don't tolerate anything.

There may be more analogs that I haven't written. Maybe others can come up with more. At any rate... I usually have no trouble explaining my passtime in terms of fishing.

HELLO FELLOW HAMS:and FUTURE HAMS !!!!!!!

re: HAM BBS dedicated to amateur radio !!!!

There is a DEVOTED AMATEUR RADIO BBS in town ,from your
ARRL/LAX affiliated club coordinator , JOE CIRA , KB6AXK ....
Everything and anything about AMATEUR RADIO will be found here,
IF NOT ? Let me know and we will post it and file it !!!!!!!!

HAM*INFO*LINK*SOURCE BBS at 1-818-584-1952....
24 hrs,8-n-1,anyspeed.......
running 486/66 with 2.1 gig of space !!!
cd/rom's soon and tnc/modem door soon !!
qsl route database,clubs,newsletters,bulletins,shareware,utility
mods,programs,test ques,lists,and more....
VEC/VE exam & class list for all So.Cal.
sample exam tests and answers for all class's..
ARRL mirror of all there files !
Using Wildcat v4.11 software..
easy to log in and no FEE's it's FREE !
5,000 FILES IN 113 FILE AREA'S..so far !

73's & 88's de kb6axk,joe cira,ARRL/LAX/ACC.
INTERNET E-MAIL ADDRESS:> kb6axk@netcom.com

I am looking for a software to learn and practice CW with a Mac SE.

Thanks for any help.

Best 73 from F5LHF.

: 146.52 MHz is known in the U.S. as the National Simplex
: Calling Frequency, and is listed as such in the band plan
: of the ARRL Repeater Directory. Recently there has been
: a wide-area net camping out on 146.52 which justifies
: being on the Calling Frequency by pointing out there is
: nothing in FCC Part 97 saying that anyone owns any
: frequency, that by law they can use 146.52 for a net or
: anything else, that it's just a "gentleman's agreement"
: saying 146.52 is a national calling frequency. To what
: extent should we as amateur radio operators follow the
: "gentlemen's agreements"? I monitor 146.52 fairly often
: at home and always when I travel, using it as I believe it
: was intended, which is a Watering Hole along the radio
: spectrum. The net in question, by the way, tends to go on
: for hours on Saturday nights, and essentially encourages
: lids to act out with other lids. --Bill KB8USZ

We should observe gentlemens' agreements, as they have been for years. The problem is that there aren't as many gentlemen on the air as there used to be. :-)

>an antiquated mode of communciation like Morse will demand it.

It may be "only a matter of time", but you should count on a
LONG time. The "demand" will need to be heard from a majority
of the nations in the ITU at some future World Radio Conference
in order for the international rules to change. Figure on several
years before that happens, then figure on several more years
before the FCC changes the US rules.

Your mileage may vary.

4785. HAM-server Information

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-14 00:00:00 UTC
From: server@GRAFex.sbay.org
Message-ID: <gate.uJ0FBD1w165w@GRAFex.sbay.org>
Source record: 238584
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Distribution: world
Subject: HAM-server information

HAM-server was devised to allow people without direct internet access a way
to get amateur radio related programs and other information. It is not
directly on the internet, so ftp and telnet is not available.

Most of the files on HAM-server are available via ftp from the various sites
around the world that archive them. That's where I got most of them.

In addition to DOS files, there are some Mac ,Linux, and OS/2 files available.
I'm always on the look out for more (particularly Mac, Linux, OS/2).
See below.

General Information:
==========

There is a daily limit of ALL requests of 3-megs. There is an individual
limit of 1.2-megs. If there are a series of files you want to order,
stretch them out over a few days, rather than ordering all at once.
That way, you are almost assured of getting them all, and you won't be
blocking others from getting their orders filled.

ASCII (text) files are split at about 59,000 bytes. UUENCODED binary files
are split at about 750 lines.

A new INDEX is automatically generated every Sunday.

Ordering Information:
==========

Send an email to:

HAM-server@GRAFex.sbay.org

In the text of the message, place:

HELP
GET /hamradio/INDEX.TXT
QUIT

HELP will send you the HAM-server HELP file. This is processed immediately
for return delivery.

o DOS

If you are using a PC and you do not have UUDECODE, order
UUDECODE.BAS or UUDECODE.C and UUEXE536.ZIP. Compile on your

system then uudecode UUEXE536.ZIP. This is a archive of UUENCODE
and UUDECODE, with documentation. This will work for DOS and OS/2.

o OS/2

I highly reccomend UNZ512X2.EXE. This is InfoZip's ZIP and UNZIP
(plus other stuff). Will dearchive PKUNZIPped files, as well as
UNIX zipped files.

o Macintosh

Most Mac programs are stored in binhex (.HQX). You will need a
utility, such as StuffIt to decode. There are also UUDECODErs
and other de-archivers available. See the index for
/hamradio/macstuff/utility.

o Linux

Use UNZIP.

Some Reasons Why Ordered Files Are Not Received:
==

o If you are ordering from a ccmail system, be advised that ccmail
in its default configuration attempts to automatically UUDECODE
files. If your order is sent in parts, it will hiccup after the
first part. See your system administrator.

o Your return path is incorrect. My bounce mailbox fills up quite
regularly with messages. And, since the path is incorrect, I cannot
contact you to let you know. Try the PING command to check that
the path is open.

o You have spelled the file name incorrectly. Check the INDEX.

o You have entered your request incorrectly. Check the HELP file
for correct syntax.

o The file name has changed since the INDEX was generated. Order a
new INDEX. See the HELP file for the NEWFILES command.

o You sent your order to me personally or in reply to this post.
Orders are only honored when sent to HAM-server@grafex.sbay.org.
That's the way the software works.

YOUR HELP IS NEEDED:
====================

If you have a program you would like placed on HAM-server, you can email it
uuencoded (DOS, Linux, and OS/2) or binhexed (Mac) to

incoming@grafex.sbay.org

This email address is set up to flag me that there is something new that I
need to take care of quickly.

By: Auxiliary Communications Service (ACS), the volunteer
communications reserve of the State of California
Governor's Office of Emergency Services

Bulletin 396- for Release 9/18/95
OPS - Ways to be involved 2/2

During the floods of '95 a number of units had their personnel active in support of paid staff in such positions as liaison, clerical, office, phone answering, computer support and general all-around service in the EOC or EMA office.

ATV shows up now and then in the ACS, RACES and ARES activities. Longtime proponent of ATV, Deputy Fire Chief Ben Lopes was responsible for a RACES Resource Order by the county to Santa Clara city for support during High-rise '95, a drill at the Apple Computer towers in Cupertino.

A Radio Officer in a county with a multicultural population is adding multi-linguistic speaking personnel to the unit. These people, both non-licensees and licensees, will aid local fire and law officials during emergencies as people tend to resort to their native language under stress.

Communications responders apparently were not involved in the following but it is worth considering. Do you know what happens when a city of 12,000 loses its total water supply with NO immediate relief available? One in California recently had that experience. It was estimated it needed 2 gallons per person per day and none was available - NONE! Due to other problems it had no funds available to buy water, neither did the county and there was no real program in place to take care of the situation. What if it was 50,000 to 1,000,000 people? Do your responders carry a three-day supply whenever they leave home? Does each house have a three-day MINIMUM supply per person? Learn how to 'treat' water so it is safe. Learn how to carry water and store water! Unless it is 'canned', stored water must be replaced with fresh water at appropriate intervals. The intervals vary with the type of storage. Even so, stored water can become 'flat'. Watch for a bulletin on how to store water in the near future!
End of series.

A friend of mine was injured in a football game 25 years ago, and has
been paralyzed from the neck down. He is able now able to type on a
computer using palm sticks, but I don't know if he could effectively
send morse code.

Bill would like to get his license, and I have been encouraging him to
do so, but he lives in a small town about 80 miles from nowhere, so I
would have to talk a couple of VE's into going down to give him the
test, but I don't think that would be a problem.

What I was wondering is if there is some organization that I could
contact for more information concerning this situation that might be
able to better inform me of what would be necessary for him to get a
ham license.

Thanks for any help . John

4791. Icom 22S mods

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-15 00:00:00 UTC
From: broehrig@admin.AUrora.EDU
Message-ID: <Pine.3.89.9509141933.A28969-0100000@admin.aurora.edu>
Source record: 238493

Since there have been a number if queries about my 22S dope, here are some of the details of what I did, without going into the technical details. If anyone is interested, you can send me a SASE with enough postage for 2 ounces to the address below.

With my 22S mods, you get the following:

1) All the standard 30 kHz spaced repeater channels between 146.010 and 147.99 MHz.

2) All the standard 30 kHz spaced simplex channels between 146.43 and 146.58 MHz.

3) All the standard 30 kHz spaced simplex channels between 147.42 and 147.54 MHz.

4) Your choice of 9 other channels.

This is all accomplished very simply by rewiring the HI - OFF - LOW power toggle switch on the front panel to be used to program the D6 and D7 program lines (or neither line in the center off position), rather than put diodes in these places on the board.
Diodes are then installed in the D1 thru D5 rows as needed. The D0 row is used for the 15 kHz "in-between" channels, where needed.
I then installed a ON-OFF switch (hi power only) on the rear of the unit.

The 22S will operate down to about 145.5 without retuning.

With the addition of a single IC (a CD4001) you can provide for an odd offset repeater while retaining the normal offset & simplex capabilities of the 2 frequencies involved. For example:

147.660 - 147.060 Standard repeater
147.060 simplex
146.580 simplex
147.660 - 146.580 Odd repeater

I also have 4 pages of details on how to use the 22S with 20 kHz spaced channels (Author unknown and I did not try this).

Does anyone know of a bug in the Alinco DR600TB? When the rig is remote controlled from an HT the frequency and Memory channel display's dont match if you change frequency from the remote HT then enable crossband.

I feel like this is a software bug and not a hardware problem. I would like to know if anyone else's rig does this. The rig works perfectly from the controls on the radio and from the mic.

Thanks in advance.

I just heard a net on 20 meters called the United Nations Amateur Radio Readiness Net. If this is the same as what you are inquiring about, they can be found on these frequencies 14.153, 14.165, 14.258, 14.268, 14.328 I heard the net's closing this evening at 21:45 EDT and they mentioned it will open up again at 08:00 EDT

I believe their primary mission is to handle health and welfare traffic for disaster sticken areas.

> are type accepted AND are field programmable.

You're missing the point. Field Programming has to be done by an FCC
licensed technician. And you can bet he's not going to risk his license
putting non-authorized channels on a HT at the request of the user.

If you're suggesting that the useer does the "fiddle the jumpers around"
by himself, then you've just violated the Type Acceptance.

Sure, I swap channel elements around in my Mitrek all the time. But it's
inside the amateur band allocations now. If I put it back up in the
commercial or public service bands, then it has to be tuned up and put
on frequency by a FCC licensed technician.

"Are you authorized to transmit on this frequency?"
"no"
"No problem, I'll just sign my license number to the service log."

Christopher, Christopher, Christopher...

Let's tell the truth here, shall we? I never made a "personal attack" on
you. I was merely debating the merits of code vs no-code on this
newsgroup. I never "made assumptions, called names, or threatened you"
in any way, either privately or through E-Mail. In fact, wasn't it you
that initiated the E-Mail contact with me? I believe that it was! When
I informed you that I did not wish to continue our E-Mail conversation
any further (since I found it pointless), you then responded by saying
that you would not accept any further E-Mail from me and did not wish any

further correspondence. I respected your wishes and terminated our exchange at that point. I was quite surprised, to say the least, when I signed on here tonight and read your accusations. Not a nice thing to do, Chris.

Please refrain from making any further false accusations and attacks on my character. At best, it may earn you the discredit and loss of respect of your fellow hams here on this newsgroup. At worst, it very well may cause a libel and/or defamation of character lawsuit to be filed against you if this sort of thing continues.

-Drew in Charlotte-

AMATEUR RADIO: ELMERS LIST INFO AND ADMINISTRIVIA

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via Usenet. Any other uses, please E-mail for permission.

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

Scott Ehrlich has graciously agreed to be a WWW Elmer and provide further information about how to obtain and use WWW client software such as Lynx and Mosaic (see his entry). While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

I expect there to be a bit of controversy regarding my adoption of this somewhat radical new standard, especially to many users who can't or won't use WWW. Those users should be assured that I wouldn't have adopted a standard unless it was easily human-readable by those accessing this document as straight ASCII. The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software (which is why almost all http: URL's in this directory also have corresponding ftp: or gopher: URL's).

For more information about URL formats, see:

ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview:

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of

Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1947-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@gonix.com, the default Reply-To: of this message). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not necessarily get reviewed for some time (although all E-mail sent to me is certainly read with interest *eventually*). Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion postings to this message, "Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource Directory [*-*]," and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

+ news:rec.radio.amateur.misc
+ news.rec.radio.info
+ news:rec.answers
+ news:news.answers

on the 1st of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

+ ftp://ftp.cs.buffalo.edu/pub/ham-radio/
+
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elm
ers/
+ ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2

send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail
within 24 hours (the mail-server uses batch priority to reduce
system demand).

5. Internet Gopher: The latest copy of the list should be available
from the following Gopher sites:

+ gopher://jupiter.sun.csd.unb.ca/
+ gopher://gopher.univ-lyon1.fr/
+ gopher://ftp.win.tue.nl/
+ gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be
available from the following WWW sites:

+ http://www.gonix.com/pschleck/elmers/
+
http://www.smartpages.com/faqs/radio/ham-radio/elmers/top.html
+
http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.mi
sc.html

The advantage of reading the Elmers list at these sites via WWW
client software is that all URL's are converted to hypertext
links.

see also the newsgroups under comp.infosystems.www.* (I haven't
listed URL's for all of the newsgroups under this hierarchy as
there are now about a dozen of them (!!!).)

How may I contribute to the Elmers List?

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users,
for making this service a success.

146.52 is the National Simplex Frequency - simplex nationwide, no
local option, the one simplex frequency you're supposed to have in
your crystal rig if you're having only one - but I've never seen it
referred to as a "Calling Channel." Maybe, in these synthesized
times, it should be.

>kd6ven
The H-16's jumper will need to be removed for field programming. The F40LT
can be front panel programmed only after it has been setup to do so from a
computer program. The F30LT is the VHF verssion. Now both support 99 channel
alpha text display, emergency button, soon a man down switch, using a UT-80
two-tone decoder a base station can send a two tone over the air disabling a stolen radio
All of these radios are pass word protected, with the F30/F40LT being able to
have a passwrod of choice programmed into the radio.

>Christopher Michael Botka

I wrote a mini-review over in the .equipment group a week or so ago.
The executive summary is, buy it, its neat.

There are a few quirks, the manual *really* sucks, no TT pad, and it is only 0.28 watt, but its such a *handy* little thing, kind to batteries, covering a very wide range of frequencies (100 MHz to 999 MHz with a couple of gaps, no 200-300 MHz or 512-800 MHz coverage, the latter isn't interesting being just UHF TV, but coverage of the former would be), good audio on transmit and receive, relatively little intermod for such wide frequency coverage, and its just cute. It's the closest thing yet to Dick Tracy's wrist radio.

Now I wouldn't suggest anyone buy this rig as their *primary* radio, but especially if you have a mobile rig capable of crossband repeating, this thing is great. Think of it as a pocket scanner that can double as a cordless mike with a long range. A TT pad would make it perfect, but like the Standard engineers, I can't figure out where to put one either. Did I mention it's tiny?

It really is primarily a scanner, and it has more scanning modes than you can shake a stick at. Being able to transmit too is a nice bonus. Everyone to whom I've shown mine wants one, including non-hams interested in it as a scanner.

4806. USN Antenna Farm near Cutler Maine ?

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-15 00:00:00 UTC
From: babineau@bnr.ca
Message-ID: <43c13o$69i@bmerhc5e.bnr.ca>
Source record: 238508

Hi :

I'm curious if anyone knows what the purpose of the massive antenna farm
is near Cutler Maine, which I believe is US Navy.

The past two summers I have spent some time on Grand Manan Island
(New Brunswick) and have noticed this "farm" on the mainland which
appears to stretch for a few miles. It clearly visible with the naked eye
or low powered binoculars.

My guess is that maybe this is used for communication with submerged subs
(the scale seems about right) other possiblities are some sort of monitoring
station or possibly HF radar.

For someone who lives in a condo with a covenant restricting antennas,
this setup seems like "Ham Heaven".

Bill - Let's start a movement to push them on to the 145.19 repeater
network. It provides multi-state coverage and would certainly further
their goals, while also freeing up 146.52 for its intended purpose as a
nationwide calling (NOT WORKING) frequency.

: detail via a long, laser-printed letter to ALINCO. I received a quick
: handwritten scribble attributing it to operator error. They did NOT
: state what my error was! Others in my area have also had problems
: with the DR600 while in remote mode.

What has been the problem? I bought a DR600 and the 440 side would transmit
for about a minute and a half before the "on air" light would blink and the
unit would no longer transmit. THe antenna match is 1:1, i cant see what
the problem is. Does this sound familiar??

>(the scale seems about right)
You are correct. The call sign is NAA. The operating frequency is
24KHz. The modulation is MSK. All of this info is contained in the
Shortwave Directory, Grove, ISBN 0-944543-00-6.

The Jasik and Johnson Antenna Engineering Handbook, Second Edition,
Table 24-1 published by Mc Graw Hill ISBN0-07-032291-0 gives the
following information about these antennas:
1 megawatt at 17.8KHz.

I don't know which reference is correct but you get the idea. The USN
has been experimenting with direct satellite communications to
submarines using high-speed bursts to a small Ku-band antenna that is
extended to the surface similar to a periscope. The data rates
available will likely make this the medium of choice soon. The VLF
links will likely continue to serve subs that are deeply submerged.

>
>Bzzzzzt. Wrong.
>Actually, a false generalization. So-called "moving radar" has this
>limitation, but the hand-held guns, for example, do not have this peculiarity.

You're both half-wrong.

There are three types of radar units. The traditional type is stationary-only. Older examples of this type of gun include Kustom MR-6, and MR-7, CMI SpeedGun 1, etc. Current models include Kustom Falcon, Kustom KR-10/stationary, Decatur Ra-Gun, and others. These types of guns, some handheld, some two-piece, can only be used from a stationary patrol vehicle. They simply measure a single, strongest doppler return and display the corresponding speed. Same thing that the cheapo Ramsey kits do, only they do it much better.

The second and most common type is "moving-mode". This is the most prevelent type of unit, and most state police agencies use two-piece models such as MPH K-55 (x or k band), Kustom KR-11, Kustom KR-10, and many others. There are some handheld moving-mode guns such as CMI SpeedGun 8, Kustom HR-12, and others. These guns all can be used either stationary or mobile. In mobile use, they are aimed out the front windshield (or clipped to a window and aimed forward) to clock oncoming vehicles. They do this by measuring the patrol car's ground speed and the closing speed between the patrol and target, and by subtracting the two they calculate the target's ground speed. These same guns can be aimed rearward and produce the SAME RESULTS - - either way the dopper shift for the patrol speed and for the closing/receding speeds are the same, and subtrating the two still yields the target's speed. This method isn't done often, because it would require a lot of looking in the rear-view mirros, plus by that time, the target vehicle has already seen the patrol car, so it's pretty much pointless.

The third, newest type of moving-mode radar uses two antennas - one aimed forward and one aimed rearward. The most common example of this is the Kustom Pro-1000 series. With this unit, the patrol is able to clock vehicles in front of or behind the patrol, either in the same lane travelling the same direction, or in the opposite lane travelling the opposite direction. With the two antennas, and more

signal processing and microprocessor power, it can do this. How
well it does it is another story, but it is done.

Note that some of the conventional-type moving radar units can also
be equipped with a second antenna that is aimed rearward, but it
still doesn't allow the units to do sophisticated any-lane any-direction
clocking like the third type does. It mearly gives the ability to park
the patrol car on the side of the road and clock vehicles approaching
from the rear without having to reaim the common forward-aimed antenna.
The officer can switch between the two antennas with a simple switch.

: Any recommendations? Please email me if you don't mind. Thanks...

Most HT's (walkie-talkies) nowadays have the out-of-band receive feature;
for 2m HT's, it's usually about 130-something to 170-something MHz. If you
need anything out of this range a 2m HT definitly won't do. Some
can be modified to transmit out-of-band too. I don't know about programming
30 channels to be scanned though. I know there are scanning features but
whether they scan programmed channels or the whole band I'm not sure.
HT's are usually $200-$350 or so; more than that and you can get a dual
or 3 band radio that covers 440 and maybe 220 as well.

ARLP039 Propagation de KT7H

ZCZC AP08
QST de W1AW
Propagation Forecast Bulletin 39 ARLP039
From Tad Cook, KT7H
Seattle, WA September 15, 1995
To all radio amateurs

SB PROP ARL ARLP039
ARLP039 Propagation de KT7H

The sun was spotless over most of last week. The solar flux was down an average of five points, and every day the flux was below the 90 day flux average, which declined from 74 to 73 last week.

Not only has the sunspot and solar flux picture been poor for HF propagation, but geomagnetic activity has been unsettled to active. This may continue over the next day when this bulletin is written, and then is expected to fade into a quiet period from September 23 through October 1. Recurring coronal holes are expected to return with active geomagnetic conditions October 2 through 5, and again around October 8.

Solar flux should rise slightly to the mid seventies around September 22, and then fade back to lower levels around 70 or below. This has a depressive effect on HF propagation, but there should still be some good openings over north-south paths.

Sunspot Numbers for September 7 through 13 were 0, 0, 0, 0, 0, 12 and 11, with a mean of 3.3. 10.7 cm flux was 70.2, 69.1, 68.7, 68, 68, 68.6 and 69.2, with a mean of 68.8.

This week's path projection is to Brazil from Hawaii, Anchorage, Alaska, and San Diego, California.

From Hawaii 80 meters should be open from 0430z to 0930z, and 40 meters from 0330z to 1030z. Check 30 meters from 0230z to 0830z and again from 1030z to 1130z. 20 meters should be open from 0030z to 0700z, 17 meters from 1630z to 0530z and 15 meters from 1730z to 0430z. Check 12 meters from 1800z to 0330z, with best signals from 1900z to 0130z and 10 meters from 1900z to 0130z, with the best bet from 2000z to 2300z.

From Anchorage check 80 meters from 0330z to 0930z, 40 meters from 0230z to 0830z, 30 meters from 0100z to 0600z and 20 meters from 2200z to 0300z. 17 meters should be open some days from 1930z to 2300z.

From San Diego 80 meters looks good from 0200z to 1000z, and 40 meters from 0100z to 1030z. 30 meters should be open from 0000z to 0730z and 1000z to 1130z. 20 meters is worth watching from 2030z to 0500z, although it may open as early as 1400z. 17 meters looks open from 1500z to 0300z and 15 meters from 1700z to 0100z. On 12 meters look for openings from 1800z to 2330z and on some days on 10 meters from 1900z to 2300z.

You're wrong too :-)

MR stands for Moving Radar. The MR-7 has a stationary and a moving mode.
(Although I don't know about the other models you listed.

>They do this by measuring the patrol
>car's ground speed and the closing speed between the patrol and target,
>and by subtracting the two they calculate the target's ground speed.
>These same guns can be aimed rearward and produce the SAME RESULTS - -
>either way the dopper shift for the patrol speed and for the closing/
>receding speeds are the same, and subtrating the two still yields
>the target's speed.

The reason they hit the on-coming lane is because the doppler shift will be
way up there. The cars going in the same direction of the cruiser are
attenuated as part of the clutter. That is, these gadgets measure relative
speed. A car in front of you going 65 to your 60 measures as 5 MPH, and
whatever frequency that produces (say 157 Hz at X band). Now a car
coming at you with a speed of 65 to your 60 is actually closing at a
relative speed of 125 MPH, or 3.9 kHz doppler shift. The bandpass filter
in most of these is tuned to the cruisers speed (say 60 MPH and 1.9 kHz
doppler shift), and some maximum velocity, say 100 MPH above that (say
5 or 6 kHz). Thus, with a bandpass of 1 kHz to 6 kHz you can see where
the doppler shifts from vehicles in your lane direction fall: highly
attenuated.

Now to answer the original posters question. If the cop got you at 85 MPH
that means you have an equation with an infinate number of solutions. In
order to solve the equation, you need to know how fast the cop was going.

1. How fast was cop going.
2. Find the doppler shift of the relative speed.
3. Find a reason why the 2m rig would produce that shift.

But there's more:

1. The radar uses a crystal detector.
2. Any pair of frequencies that give the same doppler shift will trick the radar.
3. Most radars have a big gaping hole called an antenna which let all of these mixing products in...

The solution:

1. Get a lawyer.
2. Pay the fine.
3. Get your speedometer calibrated and a receipt, and then take that to the bailif (sp?) and he will cancel your ticket. (make sure the technician specifies a great error).

Step three is actually criminal, but if we worried about that, police wouldn't have radars in the first place. i.e., speed kills very few people statistically speaking. radars are merely a revenue tool.

Steve

Well Burt, I liked the Repeater Rabbit and saved it for later.
I might send it to someone down the line or talk about one or two of
the meanings you could read into it over the air. Since you were
looking for more responces than what you got, this is mine.

If you throw out something aimed at that emotional button that
everyone has, you most certainly will get more mail. As for the
Rabbit, only a few good comments back indicates that it was recieved
and digested. Of course with your history of controversial posts, I'm
sure that there are some who wouldn't care how good it is simply
because you posted it.

I talked with a newpaper editor sometime back about this. He calls
them Hot Spot articles. He said that if you get a ton of mail back
then it hit a hot spot. Being as how the subscribers are the life
blood of the paper he has to pick his hot spots carefully. No such
thing in this case, BUT, he also said that he can tell when something
went over pretty well. He gets a few nice replies and no flames.

I guess that I could post something in the antenna group saying that,
"IMHO a 5 element wide spaced yagi is a piece of crap compared to a 2
element quad" and I'll probably get plenty of mail telling me I'm
nuts, stupid, ignorant or whatever. Point being, it is a lot easier to
get tomatoes in the face then a standing ovastion.

>False assumption....

Gosh. For once I agree with Jeff! Must be the lack of sunspots :-).

I, for one, can copy faster than I can send. I can't do faster than
10 wpm on a straight key and 18 wpm on a paddle. Anything faster than
that, I am too embarassed to get on the air with; extra dits, bad spacing,
you name it. So, 99% of the time, I use a keyboard for sending.

Oops, yes Gary, I use CW now and then; but just the 5NN TU stuff, I
promise :-). Still collecting postcards...

4822. Re: Police Radar and 2m mobile

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-15 00:00:00 UTC
From: ssampson@icon.net
Message-ID: <ssampson.40.000F7923@icon.net>
Source record: 238524

Problem 1. A police officer has just stopped you and given you a ticket
for 58 MPH in a 25 MPH zone. The radar used, was a K-band
instant-on model, operating at 24.15 GHz transmitter frequency.

How fast was the police cruiser going?

Hint: The formula for doppler shift per MPH is approximately:

89.36 V Where: L = 1.242 cm
Fd = ------- V = Target Velocity
L

or, 72 Hz/MPH doppler shift.

Assumption: The radar requires half a second of one continuous frequency
before it declares a lock-on.

Assumption: The police cruiser must be traveling at or below 25 MPH in
order for the radar doppler filters to function properly:

(That is, the radar cannot measure velocity below
the cruisers speed. By going 25 MPH and detecting
a closing target at a speed of 25 MPH also, gives
a closing speed of 50 MPH or 3.6 kHz. The bandpass
filters 3 dB point moves to two times the cruisers
speed).

Assume that he was going 25 MPH. That would give you
an 83 MPH closing speed, or 5.976 kHz doppler shift.

Assume that he was going 10 MPH. That would give you
a 35 MPH closing speed, or 2.52 kHz doppler shift.

Assumption: The 2m radio processes an audio range of approximately
.05 to 3.0 kHz. Normal voice products can have high
amplitudes up to about 1.0 kHz. 2m radios generally do
not use PL tones. The deviation of most amateur 2m rigs
is limited by clipping, thus is usually distorted as it
tries to remain below 3 kHz deviation as the operator
yells into the audio amplifier. The Modulation Index of
a typical 2m amateur radio, at 1.0 kHz modulation is
about 3 radians. This provides about 6 sideband pairs,
or 12 sidebands of 1.0 kHz for a 12 kHz bandwidth. The
first 2 sidebands each side of Fo are significant to the
radar. Thus, there exists a sideband at 1.0, and 2.0 kHz
that could generate a doppler shift in the crystal detector
of the radar.

>LONG time. The "demand" will need to be heard from a majority
>of the nations in the ITU at some future World Radio Conference
>in order for the international rules to change. Figure on several
>years before that happens, then figure on several more years
>before the FCC changes the US rules.

My best guess is on the order of a decade. It may happen as
soon as 1999, but it may take a bit longer. The US delegation
has been the main stumbling block at past WARCs. Many nations'
delegations seem to have been ready to drop the requirement as
far back as 1979, but were unwilling to buck the US position on
such a relatively unimportant (to them) issue. Of course the
nation with the largest amateur population simply took a footnoted
exception and dropped the code speed test unilaterally for their
amateurs. Many other nations have very small, or no, amateur
populations, so the whole issue is of little interest to them.

Once the US instructs its delegation to a competent WARC to
push for elimination of the code speed test requirement, it
will rapidly be gone. The US won't so instruct its delegation
unless there is political pressure to do so. Since the US
doesn't really much care about amateur radio either, and
as the FCC has publicly stated, simply goes along with the
sentiments of the majority of current licensees on most such
issues, the trend toward code test free licenses that started
in 1991 will eventually swing the balance toward eliminating
the code speed tests entirely.

In the meanwhile, Article 32 doesn't specify a test speed,
all it says is that an applicant shall "send by hand and
copy by ear texts in the International Code". That could
be at 1 WPM and still satisfy the requirement. Certainly
the current baroque US system isn't mandated by Article 32.
(And since the US no longer requires a sending test, and
makes accomodations for hearing impaired applicants, it is
in technical violation of Article 32 already anyway.) And,
of course, the original justification for the requirement
is also gone now with the near universal lack of need for

other services to intercommunicate with amateurs using
code. The code speed test requirement is now merely an
empty ritual held over from the days when it actually
had a valid regulatory purpose.

Note, of course, that elimination of code speed *testing*
is not the same as elimination of code *usage* on the
air. That will continue as long as at least two amateurs
are interested in doing so.

Gary

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 15/2330Z SEPTEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 15 SEPTEMBER AND FORECAST FOR 16 SEPTEMBER - 18 SEPTEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 14 Sep
Daily Proton Fluence >1 MeV: 2.3E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 2.6E+09 (very high)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
16 Sep 17 Sep 18 Sep
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 16 Sep: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active, with brief minor
storm period 12-15UT.

Estimated Indices : A K Observed A Index 14 Sep
Learmonth 20 2334 5432
Fredericksburg 19 5
Planetary 30 10

Observed Kp for 14 Sep: 3332 2223
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
16 Sep 15 Quiet to unsettled, with possible active periods.
17 Sep 10 Quiet to unsettled
18 Sep 10 Quiet to unsettled
COMMENT: IPS Geomagnetic Warning 22 was issued on 13 September and is
current for interval 15-16 September.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
15 Sep normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
16 Sep normal normal normal
17 Sep normal normal normal
18 Sep normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
15 Sep 16 near predicted monthly values

Predicted Monthly T index for September: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
16 Sep 15 Near predicted monthly values
17 Sep 15 Near predicted monthly values
18 Sep 15 Near predicted monthly values
COMMENT: IPS HF Communications Warning 23 was issued on 13 September
and is current for interval 15-16 September.
Observed MUFs at:
Darwin: near predicted monthly values.
Townsville: near predicted monthly values.
Hobart: near predicted monthly values, with blanketing sporadic E
observed 17-19UT.

4826. This Week in Amateur Radio #129 (for air through 9/22/95)

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-15 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <xfFB1DA.sanderman@delphi.com>
Source record: 238528

Here is a summary of news items covered on edition #129 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 22-Sep:
-
1. Commissioner James Quello Denounces FCC Office Closings
2. FCC Announces New Reciprocal Operating/Third-party Agreements
3. Defense Department Tells MARS Operators to End CW Operations
4. New Packet SSTV to be Used by Ham Aboard MIR Space Station
5. Upcoming Special Event Stations with George Bowen, N2LQS
6. "The RAIN Dial-up" from Chicago
7. SETI "Project Argus" to Utilize 5000 Hams for Monitoring
8. Windows 95 Includes "1984" "Registration Wizard" Routine
9. "Amateur Radio Newsline" - Edition #944 from Los Angeles
10. Weekly Propagation Forecast
11. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
-
Funding for the program's transmission and production expense was
provided this week by a grant from users of the N9SBH repeater
system, which carries "This Week in Amateur Radio" on 146.505 and
224.16 MHz in North Webster, Warsaw, Elkhart, and Fort Wayne,
Indiana. Satellite time and uplink equipment have been provided
by SKYVISION as a service to the amateur radio community.
-
"This Week in Amateur Radio" is a weekly amateur radio news and
information service, in audio newsmagazine format, which is produced
by Community Video Associates, Inc., a New York State not-for-profit
corporation based in Albany, New York. The program is carried on
the "Tech Talk Network" each Saturday at 8:00 PM (EDT) on the
Telstar 302 commercial communications satellite, transponder 21
(11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees
west longitude in geosynchronous orbit, and can be heard on various
VHF/UHF repeaters throughout the United States and Canada, as well
as on 160 meters at 1860 kHz. Contact your local amateur radio club
or repeater operator if "This Week in Amateur Radio" is not being
heard in your area.
-
Production and transmission expenses are underwritten by
contributions from repeater system operators, amateur radio clubs,
and individuals. For further information, contact George Bowen,
N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at
518/664-6809. You may also reach them via amateur packet @
WA2UMX.FN32AW.ENY.NY.USA.NA or on the Internet to KXKVI@DELPHI.COM
or SANDERMAN@DELPHI.COM.

4827. ARLX052 Hurricane Marilyn 1

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-15 00:00:00 UTC

SB SPCL @ ARL $ARLX052
ARLX052 Hurricane Marilyn 1

ZCZC AX22
QST de W1AW
Special Bulletin 52 ARLX052
From ARRL Headquarters
Newington CT September 16, 1995
To all radio amateurs

SB SPCL ARL ARLX052
ARLX052 Hurricane Marilyn 1

At 8 pm EDT/AST or 0000z, Friday, September 15, the center of Hurricane Marilyn was located near latitude 17.9 North, longitude 64.8 West, or just north and very near St. Croix. It is moving toward the northwest near 12 mph and this motion is expected to continue through Saturday. On this course, Marilyn will move by the remaining U.S. Virgin islands and near the eastern tip of Puerto Rico tonight.

Hurricane warnings continue in effect for U.S. and British Virgin Islands northwestward through Puerto Rico. A hurricane watch is in effect for the northeast coast of the Dominican Republic from Cabrera to Cabo Engano.

Maximum sustained winds are near 100 mph. Some additional slow strengthening is possible and Marilyn could become a Category 3 hurricane on the Saffir-Simpson scale tonight or Saturday.

Amateurs are advised to monitor storm-related nets, especially the Hurricane Watch Net on or near 14.325 MHz, but to not transmit on emergency net frequencies unless directed to do so by net control stations.

Drew Durigan (VUBS79A@prodigy.com) wrote:

: I was waiting for a personal attack, and I see I'm not to be disappointed.
: Do you really think it helps your argument? I think not.

Sorry, Drew. I wasn't making an argument, and it wasn't meant as a
personal attack, just an observation based upon your comments of late,
like:

: How many of those oldtimers who can copy CW at 20+ WPM and insist that
: "I had to learn it, so they have to learn it too!"...how many of them are
: capable of operating a personal computer? Even a simple function like
: word processing or connecting to the Internet. Not many, I'd guess.

Would you rather I phrased my observation about your attitude as you
did above...a broad, innaccurate generalization of
code-proficient amateurs as backwards oldtimers? Your comment is the
same as a pro-code person saying "all no-coders are just lazy
something-for-nothing Generation-Xers", and equally innaccurate.

You can state your opinions about the usefulness/uselessness of a mode
and the reasons you hold your opinions, but when you begin making
these groundless, scatter-gun, pejoritive comments about whole groups
of people, you're being foolish and someone is bound to point it out.

: >If I was a proponent of codeless HF access, you would be an
: >embarassment. Keep up the good work.

: Will do! And I'll be sure to drop you a line when us (sic) "codeless
: HF access proponents" emerge victorious. Do you wish that message to
: be sent in digital, or would you prefer analog voice?

I doubt I'll be alive by then, Drew...I'm 46 and don't expect to live
much beyond 90. But feel free to contact me. Digital or voice???
Is that all you do?? Gee, that's pretty limited. Fortunately, I'm
pretty active in several modes, including "digital", so I guess I can
accomodate you...oh, except HF voice. I pretty much avoid that one.
And I often drop down to the Novice/Tech-plus bands too, so we'll have
at least some frequencies in common.

Seriously, Drew, the best way to incite personal attacks is to
make innaccurate and negative comments about whole groups of people.
The characterization of "pro-code" amateurs as backwards oldtimers who
can't even run a wordprocessor and "talk trash" on 20 meters is far
more insulting to a very large number of hams than anything I said
about you. And saying "Amen, I agree completely" in response to
someone who says "CW (Morse) IS USELESS!" doesn't go far in convincing

people you really understand much about amateur radio. Those who understand that the strength amateur radio lies in its diversity recognize that holding any mode (CW, digital, voice, whatever) or any sub-set activity (public service, DX, emergency communications, ragchewing, even contesting) in such contempt is contrary to the spirit and purpose of the service.

Maybe I was a little ruff on you...I'd just been reading the latest Jim (jpn) foul-language contribution to his "all you pro-coders are ***holes and will die soon, HAHAHAHA" thread. Sorry.

Greg

4830. CATCC Q&A #1

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-15 00:00:00 UTC
From: steve.hajducek@bytewise.org
Message-ID: <127.8821.20@bytewise.org>
Source record: 238532

Subject: CAT Control Center (CATCC) Q&A Bulletin #1
Date : 1995 - Thur. Sept. 14 18:10 Local/ Thur. Sept. 14 22:10 Zulu
From : Steve Hajducek, N2CKH

The questions keep coming in, the response to the press release on CATCC has been way beyound what I expected. I did not expect so many would read and reply so rapidly. I also did not expect the large number of overseas direct phone calls to the support BBS.

There are so many questions being asked that I will now start to send out this Q&A bulletin until the flow of questions taper off.

Here goes:

I downloaded your CATCC_PR file and found your sample programs very interesting as well as your Why 1024-768 screen captures, but why doesnt all the Kenwood functions like A/B and SPLIT work ?

You are absolutely correct. I have verified that I screwed up and I must apologize. Apparently when I updated my new e-mail address in the help information and rebuilt the Kenwood programs for CATCC_PR I inadvertantly used an older baseline. This has been corrected and is available on the BBS for download, it will take a day or two to get it to the ARRL BBS and the ftp sites.

What qualifies you to write software ?

Interesting question. I have 15 years experience in the design and development of software and hardware for military command and control systems. This includes ground sensor systems and environmental stress screening automated test equipment systems. Over the years I have programmed in some dozen or so odd languages in various environments. Currently I am employed as the Senior Engineer at a small contractor and manage a project team developing real-time sensor monitoring and analysis software in Ada using the lastest 32-bit Ada and C++ development tools targeting MS-Windows95/WindowsNT.

Why did you concentrate on Yaesu instead of the better Kenwood radios ?

Interesting question. I do not know what you think is better, they are all pretty much equal when comparing radio model classes. However, I have been a long time Kenwood user. My first new ever h.f. rig was a TS-520SE bought in 1980 at Radio Unlimited (long time defunct) in Somerset New Jersey. I followed that with a TS-930S from Trevose in Trevose P.A. in 1984. In 1992 I went h.f. mobile with an FT-890AT, and eventually made the mistake of bringing in the house and running

it with CT on an old '286 for a CQWW contest, that hooked me. From that point I was driven to design the best CAT program possible and I started with what I had, a Yaesu. I also own a FT-840, needed to replace that '890 in the mobile and found with Hustlers that I really didn't need the antenna tuner. I have recently purchased a TS-450S/AT also by the way.

I was wondering what class license you have and what your radio station consists of ?

Currently I hold an Advanced Class license. I started as a Novice in 1979. The main rig is a TS-930S with Nir-10 and with SB220, for search and pounch I use an FT-890AT barefoot. For VHF, we use an FT-736R with one each TE-Systems amplifiers on 6, 144, 222 and 432 with a mix of DX-Engineering on 6, M-Squared on 2 and 432 and Rutland Array on 222. I also use the Hy-Gain antenna system for my OSCAR work.

Why did you choose Visual Basic of all languages when C is the better choice ?

Another interesting question. Basic has served me very well over the years, except for system programming (you can do embedded in Basic!) it is a very good choice to rapidly develop an application. And since CATCC has been and will probably remain a part time effort, I did not and do not have the time to code everything in C. I personnally find Basic my prefered language for most programming chores, since time is always at a premium.

Can your software be run on an 80286 unders Windows 3.0 ?

No. CATCC requires as a minimum an 80386, preferably an 80386DX25 with 4MB ram and 15MB of free harddisk space, and at least 2 serial ports and 1 parallel printer port. Also a 1024x768 SVGA monitor is recommended. Optionally a Sound Blaster compatiable board and additional serial ports are desirable. Windows 3.1 with SHARE.EXE installed running under DOS 5.0 or greater is required for the operating environment. Obviously, the more CPU power, RAM and harddisk space the better performance will be.

I downloaded the CATCC_PR.ZIP file and did not find the CATCC software, what gives ?

The CATCC_PR file is a Press Release on CATCC with some sample programs that demonstrate some features built into CATCC. The programs in CATCC_PR are not complete applications, they are just toys. Look for the availability of CATCCjr on September 28th.

What is the difference between your CATCC and CATCCjr programs ?

CATCCjr is a stripped down version of CATCC, with the complete database engine (DX-dBASE(tm)) left out, and other major features reduced. CATCCjr will provide full radio control and DX-Cluster

support and WILL log, however, the logging will consist of writing to a CT compatiable .RES file. For users of logging software that import the .RES file the CATCCjr shareware/trial version may fit their needs without the need for the full CATCC software.

Why distribute the CATCCjr version of your software at all ?

I want to allow the Amateur community the use of the program so that they can provide me valuable feed back to aid in the development of the best possible application. I also feel that the thousands of users that find the trial version meets their needs should not have pay for features that they feel are not needed. Many amateur already have time and money invested in logging software, but CATCC is NOT just logging software, the CATCCjr version will make a very nice front end to someone that doesnt want to change their logging software.

Why are you putting another logging program on the market, there are so many now ?

While it is true that many good logging programs already exist, until now there has not been a really good complete CAT program that pulls all station capabilities together in a seamless integrated environment. I feel that CATCC will be THE program for Amateur station operation. It will not do everything that everyone wants in version 1.00, it may never do everything, but it is only just getting started, and so far everyone that has seen has had nothing but praise.

Why did you write CATCC when other good logging software exists ?

Because CATCC is not just logging software. It is an application that provides completely integrated station operation. No other software that I have ever heard about controls the radio equipment to the level that CATCC does. Not to mention the feature rich set of monitoring, alerting and real-time analsysis features if offers.

Does this program really exist ?

This question is popular. Yes, CATCC does exist, it is currently in the final stages of beta testing by a number users.

Is CATCC a DOS or Windows program ?

CATCC been developed as an event driven MS-Windows application.

What radio does it support ?

The current baseline supports all current and most recent manufactur Yaesu F.F. cat radios and has been tested using the Yaesu FT-840, FT-890, FT-990, FT-1000 and FT-736R radios.

Does your program work with Kenwood radios ?

Sample programs to prove the Kenwood code have been written and
tested on TS-440S/AT, TS450S/AT and TS-850S/AT radios to date,
and is currently being integerated into the CATCC baseline.

==========

I will continue to post information on the development of CATCC and
its availability. Please forward all comments, suggestions and
questions by e-mail.

I recently bought an Alinco DR610T and would like to use my headset microphone designed to be used with an Alinco/Yaesu/Icom HT. I've been told it's possible to make a circuit that will let it work with a mobile rig without completely tearing apart the mike. Has anyone built such a thing?

E-mail responses/copies appreciated, and I'll summarize responses if desired.

4838. Midwest swap meet (3898 kc) on i-phone???

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-16 00:00:00 UTC
From: willhelm@ix.netcom.com
Message-ID: <43dkm1$d1o@ixnews4.ix.netcom.com>
Source record: 238442

Hello,

Bill here in Las Vegas, Nv. I have recently begun using the internet phone and have been having a ball with it. If your not aware of its existence i will give a quick rundown. Its high quality person to person voice communications using the digitizing capability of your computers soundcard to send and receive speech through your internet connection. With the appropriate software (about $75) you can talk to anyone who has the same setup. Most of the present day soundcards have an input for a small microphone and the sound quality is excellent on both send and receive. I have talked with people in over 25 countries in the last week. A lot of hams and others as well are now participating. You can join groups (lots of ham radio stuff going on now) or speak with individuals. Depending on the capabilities of your sound card you may either have a full duplex connection or the older souncards offer half duplex connections. The system uses a VOX setup which is incorporated into the software. In addition to person to person communications there are specific channels devoted to full time programming (fm radio//news//etc.). Any internet i-phone user may broadcast full time in this manner. I would like to see someone who can monitor the Monday night and Friday night 3898KC Midwest swap net broadcast it over i-phone so the guys like myself out here on the west coast can hear it. We are too far west and because of the time difference here cannot pick up 3898kc (the band doesnt open here until its almost over). The net usually starts about 6 to 6:30 pm CST. If someone would pick up this broadcast and retransmit it over i-phone for us out here i would be happy to do the same with our Saturday and Sunday 7240 swap net from California. We have several hundred hams check in each weekend with buy, sell, trade items. I am sure many of you guys back east would be interested in hearing out nets. If anyone is interested who has i-phone capability lets talk.

Best regards,

Bill Dillstrom

KA0SCM/7

Drew In Charlotte (VUBS79A@prodigy.com, Drew Durigan) wrote

>DD>How many of those oldtimers who can copy CW at 20+ WPM and insist that "I
>DD>had to learn it, so they have to learn it too!"...how many of them are
>DD>capable of operating a personal computer?

and then re-stated for emphasis when Brian Carling pointed to
himself as an example of exactly the opposite:

> Right...but for every one like you, there's probably 10 others who
> wouldn't know a keyboard from a motherboard.

I work in digital communications and deep in the innards of
networks and protocols all day long. The last thing I want to do
when I come home is repeat the high speed TCP/IP RF networking I
do at the office. For fun, I want to do something different,
something enjoyable, and pounding brass does the job quite nicely.

> Listen to the old duffers that talk trash every night on 20 Meters. Most
> of these guys are Extra Class hams...they can (or could, at one time)
> pound code at 20+ WPM...but how many of them know anything at all about
> digital communications. Very few, I would guess.

So what if none of these people know nothing about digital
communications? The universe won't come to an end. And, the 20
meter "talk trash" people I have met in person know a lot more
about computers than they know about carrying out a conversation
at 20+ WPM in Morse. Computer operation is something almost
any person can be taught. Morse, like speaking politely and
accurately, is an art and a skill which must be practiced or
it is lost.

If you want to find frequencies where trash people talk trash,
there are many bands where such can be found. I prefer to avoid
such and seek a more gentle set, around 14.030, myself.

From: jmacdona@cycor.ca
Message-ID: <43eui8$t46@bud.peinet.pe.ca>
Source record: 238449

I have had a problem with my ft411e after it was dropped on the pavement. It initially appeared to work fine and was in fine shape cosmetically; it transmitted and received ok; changed frequencies etc.,but after turning it off then on again it had lost all its memory. turns out that the lithium battery had become disconnected and I soon had that fixed. However, now it will xmit and receive and everything appears to work but it will not change frequency from where it started at 146.00. This includes trying to change from the keypad where after the fourth digit is entered the fifth just beeps and restets to 146.00. I tried the factory default setting as suggested in the manual but with no luck. Any suggestions or hints please?

The following is a QST
======================

The FCC prepares for some major budget cutting and ham radio□
could feel the knife. Also, hate mail on packet radio angers hams
worldwide. These stories and more on Newsline report number 944
coming your way right now!

(*****
FCC BUDGET CUT

A Senate subcommittee has voted a 20 percent cut in next year's
budgets for the Federal Communications Commission. This could
have a divesting effect on the agency and on the services it
governs including Amateur Radio. Here are the details.
The Appropriations Subcommittee on Commerce, State, Justice and
Related Agencies adopted has the plan as part of a $26.49 billion
appropriation in fiscal 1996. It is $1.6 billion below the House
version.
For 1996 the FCC budget would be at $148 million. That's down
from $185 million in 1995.
Subcommittee chairman Phil Gramm, a Republican from Texas
drafted the plan. In response to objections that the FCC's heavy
workload could not stand a 20 percent cut, Gramm said he would

consider an amendment in full committee to keep the agency at the 1995 funding but would not consider any sort of long term increase in agency funding.
In reacting to the Senate subcommittee proposal, FCC chairman Reed Hundt said that these tentative budget cuts will cripple his agency's ability to adequately protect consumers from regulatory abuses. These says Hundt include unreasonably high pay phone rates and unauthorized switching of customers' long-distance companies.
The FCC chairman added that hundreds and hundreds of FCC employees will be terminated if Congress accepts the subcommittee's proposal. And says Hundt, the proposed cut also would jeopardize the FCC's ability to conduct airwaves auctions and make it impossible for the agency to implement telecommunications reform if pending legislation becomes law.
For ham radio failure to get the FCC its full funding could mean an end to all services including routine regulatory changes and any enforcement action. On a longer range outlook, such deep funding cuts could lead the FCC to deregulate Amateur Radio and other personal radio services in the same way as the agency deregulated Class D citizens radio almost two decades ago.
There is little that hams can do except to write letters to their senators and representatives to ask that congress restore the proposed cuts to the FCC.

(*****
PUBLIC INTEREST

FCC Chairman Reed Hundt is making news in another area. He says that he advocates getting rid of the nation's vague public interest broadcasting standard and replacing it with limited but clear and enforceable rules.
In a speech to the National Press Club, Hundt noted that the commission plans to launch a review of TV policies aimed at giving regulators "a second chance to figure out how TV can help us raise our nations children. As it stands now, says Hundt, the public interest rules fail to spell out what broadcasters should do for the public in return for getting free access to the nation's airwaves.
Hundt is urging broadcasters to develop what he called a Contract for Kids and Community to meet their public interest obligations and address concerns about the impact of TV on children.
Not to pat ourselves on the back, but it would appear that we at Newsline are a bit ahead of the commercial broadcasters and the FCC in this area. We have been involved in directly honoring the young achievers of ham radio for the past decade. This, through the Young Ham of the Year award which we created with the no defunct Westlink Report newsletter. Maybe its time for someone to tell the broadcast community and Chairman Hundt that for very little cost, they too can at least consider doing the same.

(*****
PACKET HATE

Some problems on packet. It appears that one or more neo Nazi hate mongers from outside the United States are showing their disdain for the minority culture with worldwide postings that support genocide for several ethnic minority groups.
The messages all have headers and call signs from various European nations, but other postings indicate the calls of the alleged originating stations are pirated. And the audit trails of these messages, that's the listing of packet sites that have relayed the messages, all seem to have a few common forwarding points in South Africa.
The bulletin identifiers on these racial nastygrams are "help dxcc," "DX news worldwide" and "new virus." All have the same or similar racist text.
While hams are upset about these messages, there is little they can do. This is because of the automatic forwarding of packet radio and the reluctance of system operators to censor any message. As a result, there is really no effective way to stop these hate messages. As a result, they are spreading around the world at the speed of light.

(*****
MITNICK IN COURT

A ham radio operator and computer hacker may wind up in a plea bargain agreement with the government. Attorney's for Kevin Mitnick, N6NHG, are reportedly trying to cut a deal for their client.

Computer hacker Kevin David Mitnick, N6NHG captured after a sophisticated electronic manhunt, has appeared briefly in a Los Angeles federal court as the prosecution and defense work privately to settle the case without trial.
Mitnick, 32, arrested in North Carolina in February appeared in court in Los Angeles on Monday, August 28th before U.S. District Judge Mariana Pfaelzer for arraignment on a 1989 probation violation charge. Mitnick was on probation on an earlier hacking case when he fled California in 1992.
Judge Pfaelzer agreed to postpone further proceedings in the case until October 2nd. This, to permit both sides in the case time to work out a plea agreement on the bulk of the case.
Neither side was willing to talk about efforts to resolve the case but prosecutor David Schindler says that the government is going to insist that Mitnick take responsibility for his conduct.
Mitnick was arrested in Raleigh, North Carolina and charged with 23 counts of computer fraud. Under a plea agreement, Mitnick agreed to plead guilty to one count of illegally using fifteen stolen phone numbers to dial into computer databases.

A plea bargain in California may not get Mitnick off easy.
Several other federal jurisdictions and two other states have made

it known that they are investigating him as well.

(*****
HACKER CONVICTED

A Washington State computer programming expert has been convicted of hacking. Randal Schwartz, who illegally gained access to an Intel Corporations computer network has been convicted on three counts of computer crimes after a two and a half week jury trial.
Schwartz, who has been described as a computer prodigy and software authority, was convicted of stealing passwords and making unauthorized software changes in the Intel computer network while he was working at the company as a $45 an hour consultant. He faces up to five years in prison and $100,000 in fines on each of three counts of computer crimes when he is sentenced. Prosecutors are also asking the court to order restitution of $60,000 to Intel.
Schwartz, who went to work at 16 after graduating from high school, is the author of two books on programming in Perl.

(*****
ACCIDENT KILLS MONTSERRAT HAM

Some sad news from the Caribbean. Word that Bobby Martin, VP2MO, was been seriously injured, and his wife Mae, VP2MN, killed in an automobile accident on the island of Montserrat. This, on Sunday, August 27th.
Bobby Martin is currently hospitalized at Hoberton Hospital on Antigua. Although seriously injured he is expected to recover.
The Martins' had temporarily relocated to Antigua following volcanic activity that began on the Montserrat in late July. They were back on Montserrat when the accident involving a British military vehicle occurred.
For those not aware, Bobby Martin, VP2MO, has been known for many years as one of the Caribbean's most active amateurs. In 1990 he received a British knighthood for his relief efforts in the wake of Hurricane Hugo, which devastated Montserrat in September 1989.
Our condolences go out to Bobby Martin on this tragic loss.

(*****
TREND BREAKER

From the business page comes news that the two day 1995 Huntsville Hamfest has broken the trend toward one day exhibitions in the southeast. According to convention chairman Scotty Neustadter, N4PYD, attendance was up from last year with an estimated at 6500 hams coming through the gate. More important, retailers report that sales were also up. Up at least 20 to 30% over 1994.
By the way, Scotty Neustadter has accepted our invitation from

to serve on the Newsline Young Ham of the Year awards steering committee. The award has a permanent home at the Huntsville Hamfest banquet. Neustadter brings to six the number of members on this council.

(*****
SET

Mark down October 21st and 22nd as the dates that the Amateur Radio Emergency Service and the National Traffic System will be operating SET '95. This, to test the readiness of Amateur Radio operators nationwide.
The Simulated Emergency Test, better known as SET is a great opportunity to lay a foundation for cooperation among public service agencies in your community. Even more important, its a way of knowing if you are ready in case you and your radio are ever called up to take over if the telephones and all other means of communication go away.

(*****
ARIANE SUCCESS

Some good news and some bad news on the experimental satellite scene. The good news is that the 77th Ariane launch took place on August 29th. This when an Ariane 44 P launch vehicle, that's the Ariane 4 version with 4 solid strap-on boosters added, when it placed the Japanese telecommunications satellite N-STAR into geostationary transfer orbit.
The next launch, V78 is scheduled for late this month when an Ariane 42L booster will launch the TELSTAR 402R satellite for AT & T.
The success of the Ariane program is important to amateur radio. This is because it will be an Ariane that carries AMSAT's Phase 3D ham satellite into space next year.

(*****
VITASAT FAILURE

An experimental satellite called VITASAT-I has failed to achieve orbit. The satellite was launched at 22:30 UTC from Vandenberg AFB on Tuesday, August 16th. According to Eric Rosenberg of Volunteers In Technical Assistance he range safety officer destroyed the Lockheed L L V 1 launch vehicle at approximately 200 seconds into the flight. Eric says it appears that the problem may have been in the second stage of the launch vehicle.

(*****
SPACE SLEEP

Now that space shuttles are flying again an upcoming mission could also hold the secret as to why its hard to get a nap in space.

Scientists will try to tackle problems that make it difficult for space travelers to get regular sleep. According to NASA, they will take part in a 16 day space shuttle mission in July, 1996 to study sleep patterns in space. Several researchers from the University of Pittsburgh Medical Center have begun training for the mission. They will try to address problems such as stress, cramped quarters, weightlessness and a busy work schedule which prevent astronauts from getting enough sleep. A spokesman for the group says that the study also will try to determine how weightlessness affects sleep and how changes to the body's rhythms affect mood and the ability to work.

Lets hope that the scientists trying to solve the problem never learn the meaning of the two letters DX!

(*****
CEPT LICENSE GROUP CHANGE

In news from the European continent, word that John Bazley, G3HCT has agreed to take over as interim chairman of the IARU Region 1 Common Licensing Group following the untimely death of Jaap Dijkshoorn, PA0TO. Bazley, who is a past President of the RSGB, is a serving Council Member and Secretary of the Society's Licensing Advisory Committee.

(*****
NEW RSGB QSL SUB MANAGER NAMED

Also, from the UK comes word that Jim Terry, G4GEU, has retired as RSGB QSL Bureau Sub Manager for the G4G series, after no less than 12 years of service. The new G4G Sub Manager will be Malcolm Slater, G3NML. His address is 46 Ladywood, Boyatt Wood, Eastleight, Hampshire.□

(*****
DX

In DX, EP2FM, the President of Iran's national ham radio society says that after a lapse of some 14 years, there are indications that there may be amateur radio activity from EP land by Iranian citizens once again. EP2FM says that he has lost most of his connections during these long years and would like to appeal for help, mostly in the form of information to help promote amateur radio in his country. He hopes to be able to offer an on the air QSO's soon.
Also, DL9FCQ, will be back in Qatar from December 29th to January 14, 1996. He will be signing A71AN/DL9FCQ, and operate mostly in CW on 80 - 10 meters including the WARC bands. QSL via the bureau or direct.

(*****
TORCH REUNION

It's been eleven years since a corps of hams from across America provided a communications network for a group of non hams. All had a single mission. To deliver the Olympic Flame to the Los Angeles Coliseum and signal the start of the 1984 Olympic games. The group was made up of members of the Telephone Pioneers of America. With the flame and the runners they traveled over three thousand miles across the nations highways and byways, with ham radio showing the way. And when the glare of the spotlights faded, the torch run group realized that they had a very special bond. Each year since the '84 games they have gathered once a year in a key city along the route to reminisce.
This year it was Los Angeles turn to host the group. One of the organizers of the reunion is a name very familiar to anyone who has ever attended the Dayton Hamvention. Ron Moorefield, W8ILC is currently the vice president of the Dayton Amateur Radio Association, but in 1984 he was on the road with the Olympic flame as it reached the City of Angels:

"I thought in my mind, the things that went on here in California. Coming up from San Diego into LA proper. The thousands and thousands of people. At times we had to get though the crowd, to keep that torch running. Really made you feel good. The people were out there rooting you on and wanting to make this a big success." Moorefield

According to W8ILC it was the spirit of the event that has held the group of volunteers together for over a decade:

"This is an event that one would never forget. I mean, it was the highlight of our life. To be able, to be asked to participate in something like that. There where thousands of people that wanted to do this, but only some many people were allowed to do it. And being a part of this team was tremendous." Moorefield

The Telephone Pioneer group says that it hopes to meet next summer in Atlanta to help celebrate the 1996 games, but this time they will not be guiding the torch. The Olympic Organizing Committee has awarded that job to a charitable organization. Word it that they will be using cellular telephones and Class D 11 meter CB to guide the torch on its cross country trek.

There was NEVER a V 4.5 for the RC850...the Computer Interface
Board you mentioend was for the 850 NOT the 85/96...which V 6 was
planned for...

I know...I OWN a RC850 with the CIB and Vocabulary expansion and
it has the LAST 850 release...V3.8 in it...

V 5 is the last release for the 85/96 series...V6 was NEVER
finished

I just started studing for my tech test. I want to get a dual band handheld. Can anyone recommend one. A friend of mine who just got his license, bought a Icom IC-T21A. It's incredibily small!!! But its only 2 meter.

So if anyone has any suggestions, please email me..
lawrence@en.com

I'm just getting into this hobby, I have a million questions. If anyone would be willing to answer a few, I greatly appreciate it!

Thanks
Scott

Yes, they do: item SCA-1. Connects to an FM receiver's detector output.
Thus it seems like you'd be forced to buy FR-1, their FM BCB receiver
as well. Total, w/o cases, is less than $60.

Posting-Frequency: posted on the 15th of each month

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to the author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 31 October
1994 to add the discussion of non-Usenet mailing lists and streamline most
of the history discussion, and to change the moderator information for
rec.radio.info.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were
created, most notably the change to place all of the ham radio groups in one
hierarchy.

The collection of newsgroups continues to grow as more people join the net,
and as more topics of discussion gain volume, I expect to see more groups be
created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the
notable exception being rec.radio.swap. There are also a few mailing lists
that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different
```

newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

All of the following mailing lists are sponsored to the Boston Amateur Radio Club, as well as some others of local interest. Thanks to N1IST for the information.

qrp-l: This is the qrp mailing list, previously maintained by Bruce Walker at Think.com. It is for discussions about the design, construction, and use of qrp (low power) radios and related equipment.
arrl-ve-list: This is a one-way list, run by Bart Jahnke of the ARRL VEC, for announcements to VEs and VE teams.
w1aw-list: ARRL bulletins, news, and information
newsline-list: Redistribution of Amateur Radio Newsline
letter-list: Redistribution of the ARRL Letter
fox-list: Fox hunting and Radio Direction Finding
fieldorg-l: ARRL field organization discussions
ham-tech: Technical discussions and questions about Amateur Radio
arrl-exam-list: amateur radio license examinations scheduled in the US and in some foreign areas.

To sign up or inquire about these lists, send mail to listserv@netcom.com with the following in the body (subject is ignored) of the message.
<listname> is the name of the list to subscribe to.
To subscribe: subscribe <listname>
To unsubscribe: unsubscribe <listname>
For more information: help
To post (to the two-way lists), send your message to <listname>@netcom.com

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

4857. NO DXPEDITION TO PY0F

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-16 00:00:00 UTC
From: ah0w@primenet.com
Message-ID: <ah0w.55.0077A76A@primenet.com>
Source record: 238461

Some of the bulletins recently printed an announcement that Jack WA7LNW and I were headed out to Fernando de Noronja as PY0F next weekend to participate in the SAC contest. As much as we'd love to make such a trip, neither one of us are going anywhere for the SAC contest this year. Jack just has some minor surgery and is hardly able to get to his own shack, much less PY0F!

(The only announcment on any DXpedition I personally distributed for these bulletins had to do withthe MV ISland Dxpedition next week. This was done at the request of the team.)

Thanks to many who sent nice comments and offers to help with the QSL cards, but neither one of us are going anywhere, at least for the time being. I hope this doesn't disappoint anyone.

Obviously it is an analogy comparing primitive methods against more
modern techniques which accomplish the same function.

>The last time I checked, no ships at sea had been saved
>by carrying a bucket of water.

Perhaps you are unaware of the concept called "bailing". :-)

In all phases of life, one must in fact
>prove a reasonable competency at a lower level before moving on to a
>'larger' or 'higher' level.

Is that a fact? Then I suppose you must be able to show mastery of the
hand crank before being allowed to use an electrical self-starter
on an automobile. In fact, the world works in just the opposite way.
The highest levels of technology are usable without demonstrating
competency with functionally identical but more primitive levels of
technology. For example, to code this reply to you I don't have to
work in primitive 1s and 0s, I have a keyboard encoder IC that deals

with such low level codes for me, and it does a better, faster, and more accurate job of it than I could do manually. Now somewhere there may be someone at a primitive computer console reading the ASCII off of a row of front panel lamps and encoding his reply via toggle switches, but I don't have to know that to communicate with him. At his low level of technology, he has to demonstrate skill and speed with manual ASCII, at the higher level of technology from which I am working, I do not.

>wanting to work for anything.

It doesn't represent a "dumbing down", rather it represents a "wising up" to partition tasks more efficiently by letting machines do what machines do best and letting humans do what humans do best. There's nothing "smart" about being a calculator, simple unthinking mechanisms can do it. What is dumb is wasting human potential doing rote repetitive things better left to machines. Humans are left with the harder to mechanize job of interpreting *meaning* from those figures cranked out by the dumb machine. That still takes intelligence, and so far we haven't figured out how to instill that into a machine.

Unfortunately, teachers far too often take the easy way out and call their job done with the mindless drill drill drill of arthmetic manipulation. They, at least as much as their students, dread the "word problems" that require you to actually *think* to find the solution. By concealing the lack of real learning under a pile of repetitive makework drudgery, they can fool themselves that they are educating the children in their charge in mathematics. Nothing could be further from the truth. All they are doing is turning their students into mindless calculators, poor imitations of cheap machines. When I was in school, we had a name for this, we called it "turning the crank" because it took no intelligence, just rote manipulation of meaningless numbers. Back then calculators were still mechanical, and had a crank. I expect the current idiom is something like "punching it out". Both are apt, and are descriptive of the mindless assembly line nature of the task.

If you made the rules state that you had to be over 50, and White, then you would have the same population you do now.

As far as Mensa, I think so too. Mensa membership means you get a piece of paper to hang on the wall. You don't have to do anything, as there is no public service, or other value in Mensa. This is in line with most HF hams being "paper hangers."

4875. CATCC Q&A #2

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-17 00:00:00 UTC
From: steve.hajducek@bytewise.org
Message-ID: <127.8866.20@bytewise.org>
Source record: 238398

Subject: CAT Control Center (CATCC) Q&A Bulletin #2
Date : 1995 - Sun. Sept. 17 08:20 Local/ Sat. Sept. 14 12:20 Zulu
From : Steve Hajducek, N2CKH

The questions keep coming in response to the press release on CATCC.

I am very pleased by the interest in being generated in CATCC and all the wonderful comments from just the contents of the CATCC_PR.ZIP file. I understand that many of you would be happy with any beta version that I make available NOW. But I ask that everyone please be patient and with for September 28th. I am in the middle of integrating the Kenwood code to CATCC and really do want to release the first version of CATCCjr with both Yaesu and Kenwood support.

Here are my responses to additional questions received:

The Kenwood programs in your CATCC_PR file I downloaded from the ARRL BBS are very interesting but why don't SCAN, A/B VFO, SPLIT and MEMORY work ?

I screwed up, and I must apologize. I recently changed my e-mail address when I registered my domain and in updating the address in the help information I rebuilt the Kenwood programs for CATCC_PR with an older baseline. This has been corrected and the updated CATCC_PR.ZIP is available on my BBS the ARRL BBS and the following ftp sites:

oak.oakland.edu
ftp.netcom.com\pub\ab\ab5sm

What TNCs are supported by CATCC and to what extent ?

I can tell you that the software has been tested with PK232, PK88, various MFJ units such as MFJ-1276 and the KAM II Plus. I own one each of those TNCs and my beta testers are split rather evenly with PK232 and MFJ units. The software is written to use a standard RS-232 connection in a dumb terminal type of interface. No speciffic TNC is supported, with the exception of the KAM II which will be supported for simultaneous HF/VHF operation when I can make to time, as of present you can use the KAM II for HF or VHF, but not both at the same time.

Can your software be run on an 80286 unders Windows 3.0 ?

No. CATCC requires as a minimum an 80386, preferably an 80386DX25 with 4MB ram and 15MB of free harddisk space, and at least 2 serial ports and 1 parallel printer port. Also a 1024x768 SVGA monitor is

recommended. Optionally a Sound Blaster compatiable board and additional serial ports are desirable. Windows 3.1 with SHARE.EXE installed running under DOS 5.0 or greater is required for the operating environment. Obviously, the more CPU power, RAM and harddisk space the better performance will be.

I downloaded the CATCC_PR.ZIP file and did not find the CATCC software, what gives ?

[NOTE: I received variations of this question.]

The CATCC_PR file is a Press Release on CATCC with some sample programs that demonstrate some features built into CATCC. The programs in CATCC_PR are not complete applications, they are just toys. Look for the availability of CATCCjr on September 28th.

What is the difference between your CATCC and CATCCjr programs ?

[NOTE: I received variations of this question.]

CATCCjr is a stripped down version of CATCC, with the database engine (DX-dBASE(tm)) left out, and other major features reduced. CATCCjr will provide full radio control and DX-Cluster support and WILL log, however, the logging will consist of writing to a CT compatiable .RES file. For users of logging software that import the .RES file the CATCCjr shareware/trial version may fit their needs without the need for the full CATCC software.

Does CATCC support the new Kenwood TS-870 ?

I have no information on the TS-870, it is very new. I just today left a message on the Kenwood BBS inquiring on how to get copies of the programming information on all their radios.

[NOTE: The decision to integrate Kenwood support into the first release of CATCC was only made last week. I had originally planned on seperate versions for each make of radio. Limited testing on the Kenwood TS-440, TS-450 and TS-850 has been performed to date.]

Will your program provide full support for the Yaesu FT-1000MP ?

I have no information on the FT-1000MP, it is very new. I have programmed for the speciffic capabilities of the previous version of the FT-1000, taking into account filter selections and the SUB VFO etc.

What is the purpose of the FSK check box and mode button on your sample programs ?

When in automode (which follows the ARRL band plan) and tuning in frequency through the digital sub bands, either LSB or FSK for can be used, depending on the users selection.

Does you AutoGrab mode actually make contacts ?

No. What automode provides is the ability to grab spots as they appear. Two settings are available, either all spots are grabbed or just those matching the DX-Filters that have been set. When both Automode and AutoGrab are on, your radios will follow the action as it happens on the Cluster.

I have two serial ports and my mouse is on com1:, if I want to use both serial ports for CATCC can I operate the program without a mouse ?

Yes. However, we are in a GUI environment and a pointing device is a necessity. CATCC has been designed so that most functions are accessible via keyboard entry, however there are limitations when using the software without a pointing device.

My Windows only has four serial ports in Ports and only two work, how do I configure my computer for the eight RS-232 ports your software supports ?

First, you must have the required hardware. Your computer may only have two physical serial ports, two is common now a days, it used to be only one. You will need an additional serial I/O board to add more ports. You can easily add an I/O adapter for two more ports and two independant Interrupts (IRQ). By default COM1: is IRQ 4 and COM:2 is IRQ3, the same pairing is used by COM3: and COM4: respectfully. Usually COM3: is set to IRQ5 which is used by default for LPT2: and IRQ7, which is normally used for LPT1: is disabled on the printer card and used for COM4:, however with CD-ROM drives, Sound Blaster boards, CD-ROM drives and the like IRQs are difficult to come by in some installations. We provide multiport operation with CATCC and support any 16bit serial port card and drivers that you can get MS-Windows work with. Two major sources are DigiBoard (1-800-344-4273) and Comtrol (1-800-926-6876) with many others to be found in BBS magazines such as BoardWatch.

Does your software actually control multiple radios and TNCs at the same time ?

CATCC provides multiport operation and requires hardware that can support simultaneous serial port operation. The nature of MS-Windows running one CPU and our software does not provide for true real-time operation, but it comes close. CATCC probably is the busiest software for Amateur Radio station control, especially in certain hands off modes.

==========

Big Question...

What are all the radios that your software supports and now and what radios are planned ?

I will list the radios below that I have and do not have the required documentation on. CATCC does so much more than just

change frequency and mode, that I require the full programming information to do the particulare radio justice.

I am collecting all the programming information on all existing amateur equipments of interest to the hobby. If anyone has the ability to photocopy and would like to send me a copy of what I have not listed has having please do. My intentions are to make CATCC an application that will support all amateur equipments of interest to the hobby eventually.

I have no imformation on any of the really new radios to determine if the TS-870 or FT-1000MP for instance have any additional features above their predesessors.

Yaesu:

Have: FT-736, FT-747, FT-757, FT-840, FT-890, FT-900, FT-990 and FT-1000.

Need: FT-650, FT-1000MP

[I also have FT-980 and FT-767 also but not acted on as seems no real interest, exists, I receive enough requests I will look at these two again.]

Kenwood:

Have: TS-440, TS-450 and TS-850.

Need: FT-950, FT-870

Icom:

Need all.

Ten-Tec:

Need all.

SGC:

Need all.

JRC:

Need all.

AEA:

Have: MM-3

[Any other direct RS-232 contest keyers in use ?]

Hy-Gain:

Have: DSU-1

[Any other direct RS-232 rotors in use, Yaesu or what ever ?]

Any other equipments in any category ?

==========

I will continue to post information on the development of CATCC and its availability. Please forward all comments, suggestions and questions by e-mail.

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WD2DND, WB2YQH & THE 59(9) DX REPORT, W5KFT, N7NG, AW0W/OH2LVG, 4X6TT, DF4RD, DL9GOA & DX News Letter, EA3BKZ, F6AJA, FR5DX, G4BUE & DX News Sheets, HJ3WYU, IT9/AA0RN, JA1IDY, ON6TT, PY2NY, VE1CBK and VE1UK for the following DX information.

4X/4Z, ISRAEL. Amir, 4X6TT, has announced a second joint Israel and Jordanian expedition to commemorate the first anniversary of the peace treaty between the state of Israel and the Hashemite Kingdom of Jordan. The operation will take place October 25-31th and will take place this time on the Isareli side very close to Ein Evrona (where the peace treaty was signed October 25, 1994). The callsigns of the Jordanian/Israeli team will be 4X7JY AND 4Z7JY. The last joint operation took place in Jordan recently using the JY74X callsign from Mt. Nebo. They will be on all bands (160-6 meters) using CW/SSB/RTTY.

8P, BARBADOS. Sigi, DL7UUO, will be active as 8P9II from September 23rd until October 10. Sigi will be on all bands (with an emphasis on the lower bands) on CW, SSB and RTTY. QSL via homecall.

9K0, KUWAIT (NEW PREFIX). Hamad, 9K2HN, will activate this new prefix from Kuwait using the callsign 9K0A. Be looking for him in the CQ WW SSB Contest and in upcoming special events. Depending on the propagation, he will be active on 20, 17, 15, 12 and 10 meters. QSL via 9K2HN by the bureau or direct to: Hamad J. Al-Nusif, P.O. Box 29174, 13152, Safat, Kuwait.

CY0, SABLE ISLAND (DXpedition Update by Wayne, VE1CBK): Plans have been finalized for a major DXpedition to CY0, Sable Island. On September 30th (1995), the team will travel by charter aircraft to the island and remain there until October 10th. We have obtained the call CY0TP. The team will consist of four operators: VE1CBK (Wayne), VE1RU (Ken), VE1AOE (Don) and VE1RGB (Gary.)
